"Canada":
publication of 1953 edition of official handbook on all phases of Canada's economic organization, 994.

Canada Fair Employment Practices Act:
provisions, 1508.

Canada Labour Relations Board:
appointment of C. Rhodes Smith, Q.C., as chairman of Board, 1257.
amendment to I.R.D.I. Act recommended by T. and L.C., 533.

Canada Safeway Limited:
See Legal Decisions.

Canada Savings Bonds:
extracts from *Hansard* re printing of, 32.

Canada Shipping Act:
Certification of Ships' Cooks Regulations, 1342.
Pilots' Pension Fund Regulations for Montreal Pilotage District, 1343.
pilotage by-laws of British Columbia District, 114, 1815; District of Caraquet, N.B., 442; Halifax, 1342; District of Humber Arm, Nfld., 1814; Montreal, 1343; Montreal district, 1814; New Westminster, 1343; Port aux Basques, Nfld., 1653; district of Quebec, 289; St. Lawrence-Kingston-Ottawa, 1342; district of Sydney, N.S., 114.

Canada Veterans Benefit Act:
Veterans Benefit Regulations, 584.

Canada Year Book:
1952-53 issue released by D.B. of S., 661.

Canadian and Catholic Confederation of Labour:
32nd annual convention, 1458.
Labour Day message of Gérard Picard, General President, 1129.
New Year's message of Gérard Picard, General President, 1761.
Dominion legislative program, 539; reply of Prime Minister, 543.
conference proceedings of C.C.C.L. and C.C. of L. shipyard unions, 1458.
Federation of The Wrought Wood Workers of Canada—amalgamation of wrought wood and furniture federations of C.C.C.L., 1258.
National Catholic Textile Federation seeks royal inquiry into textile industry, 1264.
numbers of workers affected by collective agreements in 1951, by affiliation, 1295.
retirement of René Rocque, organizer and assistant director of organization service, 814.
opens first labour college in Canada, at Quebec, 20.
regional council plans monthly consumer price index, 661.
committee to re-draft C.C.C.L. constitution appointment at annual convention, 1468.
Cardinal urges C.C.C.L. to assert its vitality, 518.
chemical products unions set up new C.C.C.L. federation—National Federation of Chemical Industry Workers, 310.
provisions of collective agreement between Dupuis Frères, Montreal department store, and National Syndicate of Trade Employees (C.C.C.L.), 1140.
1953 wage demands studied by committee established by C.C.C.L., 363.
Louiseville strike (Textile Workers' Syndicate), ends with contract unsigned, 361.

Canadian Association of Administrators of Labour Legislation:
12th annual conference, 1520.

Canadian Bar Association:
proceedings of 35th annual convention, 1426.
T. and L.C. criticizes recommendations of C.B.A., 1426, 1616.

Canadian Broadcasting Corporation:
Citizens' Forum schedules labour topics, 1601.
setting up of Polish section on international service requested by C.C.C.L., 542; requests free broadcasting time for industrial workers, 542.
R.T.B. re-affirms support of public ownership and government control of radio broadcasting and television, 547.
resolution adopted by T. and L.C. *re* free radio and television time for labour organizations, 1291.

Canadian Brotherhood of Railway Employees and Other Transport Workers:
chairmen of regional committees of Joint Protective Board, C.B.R.E., appointed, 1427; correction, 1619.

Canadian Chamber of Commerce:
presents brief to federal Cabinet, 228.

Canadian Citizenship Act:
amendments, 983.

Canadian Congress of Labour:
Dominion legislative program, 536; reply of Prime Minister, 538.
Annual Conventions:
thirteenth annual convention, 1434.
Industrial Federation of Alberta, 1755.
B.C. Federation of Labour, 1007.
N.B. Council of Labour, 1755.
Quebec Federation of Industrial Unions, 1010.
A. R. Mosher, President—New Year's message, 1760; Labour Day message, 1128; remarks on employment of older workers, 211; on unity with T. and L.C., 515; remarks at convention of International Woodworkers of America, 1738; receives honorary Doctor of Law degree from St. Francis Xavier University, 993.
J. C. Bury, former secretary of Vancouver labour council, joins I.C.F.T.U. staff, 1595.
appointment of organizer for western Nova Scotia, 1427.
resignation of Jack Williams as Publicity Director, 992.
formation of Quebec Federation of Industrial Unions (C.C. of L.), 17.
numbers of workers affected by collective agreements in 1951, by affiliation, 1295.
subsidies for coal mining industry sought by Maritime Marine Workers' Federation, 1116.

Canadian Congress of Labour—*Con.*

establishment of defence fund "to protect the rights of Quebec workers to bargain collectively", 519.
Brotherhood of Express Employees (C.C. of L.) merges with Brotherhood of Railway and Steamship Clerks . . . (A.F. of L. — T. and L.C.), 516.
election of George Burt, vice-president, to executive board of Inter-American Regional Organization of Workers (O.R.I.T.), part of I.C.F.T.U., 188.
Director of Organization appointed, 372.
establishment and functions of International Department, 371.
Textile Workers' Union of America (C.C. of L. — C.I.O.) defeats A.F. of L. rival, United Textile Workers of America (A.F. of L. — T. and L.C.) in two Ontario plants, 369.
20-point program of Political Action Committee of C.C. of L., 361.
resolution favouring re-admission of expelled unions, defeated at convention of C.C. of L., 1442.
joint statement (C.C. of L.—T. and L.C.) on rehabilitation of disabled persons, 522.
C.C. of L. — T. and L.C. unity unlikely—secretary-treasurer of T. and L.C., 660.
conference proceedings of C.C. of L. and C.C.C.L. shipyard unions, 1458.
second fair employment practices conference held by Ontario Federation of Labour, 813.

Canadian Construction Association:
convention proceedings, 189.

Canadian Federation of Agriculture:
remarks of representative at Federal- Provincial Farm Labour Conference, 46.

Canadian Machinery and Industries Construction Limited:
Company trains workers before it opens—apprentice training program in co-operation with Canadian Vocational Training Branch, federal Department of Labour, 368.

Canadian Manufacturers' Association:
82nd annual meeting, 996.
greater emphasis on apprenticeship urged by J. D. Ferguson, President, 1423.
warns industry to train personnel now to assure adequate supply of skilled labour, 816.

Canadian National Railways:
C.N.R. begins survey of its labour relations, 517.
activities of L.M.P.C. in Express Department, Montreal, 100.

Canadian Pacific Railway:
lack of skilled labour acute—apprenticeship training urged by C.P.R. officer, 1423.

Canadian Railway Board of Adjustment No. 1:
summary of recent decisions, 720, 1494, 1790.

Canadian Standards Association:
publishes *Safety Code for the Woodworking Industry,* 444.
Safety Code for the Woodworking Industry adopted as regulations under Alberta Factories Act, 584.
provisions of Safety Code for Passenger and Freight Elevators embodied under Industrial and Commercial Establishments Act and Public Building Safety Act, 1347.

Canadian Vocational Training:
See Vocational Training.

Canadian Welfare Council:
advocates added aid to employable jobless, in brief submitted to Cabinet, 517.

Canadian Westinghouse Company:
technical English taught immigrants who are qualified engineers and draftsmen, at Hamilton plant, 25.

Canals:
See Chignecto Canal.

Canteens:
United Kingdom—
mid-century report of Chief Factory Inspector compares working conditions in factories in 1951 with those of 1901, 1310.

Carpenters and Joiners:
B.C.—
annual convention of United Brotherhood of Carpenters and Joiners—proposal to seek 6-hour day, 30-hour week rejected; seeks "fringe" benefits, holiday pay, etc., 23.

Seamen:
Cuba ratifies I.L.O. convention governing minimum age for employment at sea, 1625.
Canada—
strike of merchant seamen ends—provisions of agreement reached between S.I.U. and Shipping Federation of Canada, 1597.
Certification of Ships' Cooks Regulations under Canada Shipping Act, 1342.
strike averted and settlement reached in dispute between Seafarers' International Union and Colonial Steamships Limited, Canada Steamship Lines, N. M. Paterson and Sons, and Upper Lakes and St. Lawrence Transportation Co. Ltd., 1427.
extracts from *Hansard* re Merchant Seamen Compensation Act, 32, 525.
United Kingdom—
fatal accidents to seamen in 1952, 1293.
Cuba—
Cuba ratifies I.L.O. convention governing minimum age for employment at sea, 1625.

Seniority:
Canada—
seniority provisions in collective agreements in manufacturing, 222, 390.

Service Stations:
See Garage and Service Station Industry.

Services:
Canada—
number of workers affected by collective agreements in 1946, 1950 and 1951, 1294, 1300.
number of persons 14 years of age and over employed in services group in 1941 and 1951 as reported in D.B. of S. 1951 Census bulletin, 28.

Severance Pay:
Canada—
holiday pay and severance pay—amendments to unemployment insurance benefit regulations, 1660.

Shaw, Cecil M.:
death of organizer for International Brotherhood of Electrical Workers, 366.

Sheltered Workshops:
Canada—
inclusion of disabled veterans employed in Federal Government sheltered workshops under Government Employees Compensation Act—revision of Vetcraft Shops Regulations, 1180.

Shields, James P., *Brotherhood of Locomotive Engineers*:
death of, 1118.

Shifts:
Canada—
shift differentials in manufacturing industry (in 1949, 1950, 1951 and 1953), 1530.
Que.: survey of working conditions of young workers made by *Jeunesse Ouvriere Catholique*, 230, 294.
Sask.: abolition of split shift requested by Provincial Federation of Labour, 1756.

Shipbuilding:
Canada—
conference proceedings of C.C. of L. and C.C.C.L. shipyard unions, 1458.
recommendations of C.C.C.L., 541-42.
resolutions on maritime affairs adopted at convention of C.C. of L., 1454.

Shipping:
ratification of I.L.O. convention governing crew accommodation and food and catering on board ship, ratified by United Kingdom, 1625.
Canada—
strike averted and settlement reached in dispute between Seafarers' International Union and Colonial Steamships Limited, Canada Steamship Lines, N. M. Paterson and Sons, and Upper Lakes and St. Lawrence Transportation Co. Ltd., 1427.
government subsidies only to shipping companies who build and repair ships in Canadian yards recommended at conference of C.C. of L. and C.C.C.L. shipyard unions, 1458.
United Kingdom—
ratification of I.L.O. Convention governing crew accommodation and food and catering on board ship, 1625.
U.S.A.—
I.L.A. strike postponed—injunction imposes truce in Eastern ports, 1605.

Shipping Federation of Canada:
strike of merchant seamen ends—provisions of agreement reached between S.I.U. and Shipping Federation of Canada, 1597.

Ships' Cooks:
See Seamen.

Shoe Industry:
Canada—
annual wage stabilization plans in shoe industry, 1270.

Shops:
Alta.—
amended provisions of City Act *re* closing of shops, 1801.
Man.: amendment to Shops Regulation Act, 1334.
Nfld.: amended provisions of Shops (Barbers' and Hairdressers') Closing Hour Act, St. John's, 1803; amended provisions of St. John's Shops Act *re* closing of shops, 1802.
Ont.: legislation enacted in 1953 *re* employment of women and young persons, 1037; new provisions of Factory, Shop and Office Building Act, 1640, amendments to Act, 1039, 1186.
Sask.: amendment to Village Act *re* closing by-laws, 1651.

Sick Leave:
Canada—
sick leave provisions in manufacturing industry (in 1949, 1950, 1951 and 1953), 1531, 1532, 1667.
provisions of collective agreement between Dupuis Freres, Montreal department store, and National Syndicate of Trade Employees (C.C.C.L.), 1140.
T. and L.C. support of cumulative sick leave plans in collective agreements, 1291.
N.B.: provisions of first collective agreement between government department and I.B.E.W., 371.
Que.: provisions of collective agreement between Dupuis Freres, Montreal department store, and National Syndicate of Trade Employees (C.C.C.L.), 1140.

Sickness Insurance:
Canada—
group sickness and accident insurance plans manufacturing industry (in 1949, 1950, 1951 and 1953), 1531, 1532.

Silicosis:
Sask.—
new provisions of Mines Regulation Act, 1187.
See also Diseases, Industrial.

Skaling, Hon. A. E., *Minister of Labour (New Brunswick)*:
honourary life president of Local No. 1, Bricklayers, Masons and Plasterers' International Union of America (A.F. of L.-T. and L.C.), Saint John, N.B., 18.

Skilled Labour:
Canada—
skill and ability qualifications in seniority clauses in collective agreements in manufacturing, 391.
availability of skilled and highly-skilled manpower studied at meeting of National Advisory Council on Manpower, 22.
need for skilled workers in Canadian industry, stressed, 1259.
lack of skilled labour acute—apprenticeship training urged by C.P.R. officer, 1423.
C.M.A. warns industry to train personnel now to assure adequate supply of skilled labour, 816.
greater emphasis on apprenticeship urged by Presidents of T. and L.C. and C.M.A., 1423.
bricklayers' apprentices to demonstrate skill in competition at C.N.E., 816.
Israel—
extensive vocational training program, 1430.
U.S.A.—
recommendations of National Manpower Council in report presented to President Eisenhower, 986.

Sloan Report:
results of inquiry into administration of Workmen's Compensation Act in British Columbia—summary of report of Chief Justice Sloan, 552-69; 676-86.

Slowdowns:
U.S.A.—
rail union "will not condone" slowdowns, 878.

Slum Clearance:
Canada—
amended provisions of National Housing Act, 1511-12.

Smelters:
B.C.—
report of Chief Justice Sloan on administration of Workmen's Compensation Act—submissions of I.U.M.M.S.W. *re* Trail smelter, etc., 685.

Smith, C. Rhodes, Q.C., *Chairman, Canada Labour Relations Board*:
appointment, 1257.

Social Aid:
Sask.—
amended and revised regulations under Social Aid Act, 116, 1350.

Social Security:
functions of National Labour Department defined in report of special committee of I.L.O., 1471.
I.L.O. Convention ratified by Sweden, 1625.
United Kingdom and Australia approve reciprocal agreement on social service benefits, 523.
Canada—
recommendation of Political Action Committee of C.C. of L., 361.
recommendations of R.T.B., 546.
recommendations of T. and L.C., 532.
recommendation of Canadian Chamber of Commerce, 229.
Alta.: provisions of Hospitalization and Treatment Services Act, 1039.
Nfld.: resolutions adopted at 17th convention of Newfoundland Federation of Labour (T. and L.C.), 1263.
Australia—
United Kingdom and Australia approve reciprocal agreement on social service benefits, 523.
United Kingdom—
United Kingdom and Australia approve reciprocal agreement on social service service benefits, 523.
Sweden—
I.L.O. Convention ratified by Sweden, 1625.
U.S.A.—
higher pensions granted in Ford-U.A.W. contract, 809.
See also Pensions.

Social Welfare:
Canada—
establishment of Cassidy Research Professorship—fund for social work research established by University of Toronto, 995.
United Kingdom—
resolution adopted by T.U.C. *re* Gowers report, 1657.

Spain:
establishment of employer-employee councils in certain commercial undertakings, 1735.

Speech from the Throne:
See Throne Speech.

"Spread-the-Work":
See Employment.

Stabilization:
Canada—
annual wage stabilization plans in shoe industry, 1270.
U.S.A.—
suspension of controls recommended in memorandum by assistant director of price stabilization, 29.

Staff Training:
See Civil Service; Training.

Stationary Enginemen and Firemen:
Ont.—
enactment of Operating Engineers Act, 1039, 1643.

Statistics:
See various subject headings.

Statistics, Dominion Bureau of:
discontinues cost-of-living index—only consumer price index available, 1533.
number of working wives during period 1941-1951, as shown in 1951 Census Bulletin, 662.
annual payroll of Canada's retail stores during 1941-51, 1518.
four-fifths of Canadian wage-earners reported earnings of less than $3,000 a year in 1951 Census, 190.
industrial employment, payrolls and average weekly wages and salaries as at September 1, 1953, 1731; as at November 1, 1952, 18.
statistics *re* earnings of hourly-rated wage-earners in manufacturing industries, 868.
increase in average annual earnings of steam railway employees since 1926, 363.
labour force population by industry as reported in 1951 Census bulletin, 22, 28.
personal income and expenditure in 1952, 1013.
labour income statistics, 985, 1732.
labour income in November, 1952, breaks previous records, 364.
yearly health bill of average family—results of national sickness survey conducted by D.B. of S. and federal-provincial governments, 811.
family expenditures for medical care—results of 1950-51 sickness survey, 1429.
average cost per patient-day in Canadian general hospitals, 1457.
increase in home building during first quarter of 1953, 810.
housing statistics, 189, 365, 657, 983, 1260, 1421.
one-fifth of households overcrowded—1951 Census bulletin on housing, 983.

Statistics, Dominion Bureau of—*Con.*
Canadian business controlled elsewhere at close of 1951, 1798.
review of manufacturing industries (1950), 1428.
employment and production in manufacturing in 1952, 1818.
imports of wool and cotton products and farm implements and machinery in August 1952 and 1953, 1734.
output of coal per man day in underground mines in Canada (1952), 898.
expenditures on formal education in Canada in 1950, 1429.
"Post-Graduate Scholarships and Fellowships Open to Canadian Universities", 665.
Canada Year Book, 1952-53, 661.
See also various subject headings.

Statutory Holidays:
See Holidays.

Steam Boilers:
See Boilers.

Steam Locomotives:
Canada—
recommendation of R.T.B., 547.

Steam Plants:
N.B.
resolution adopted by N.B. Federation of Labour, 1615.

number of strikes in 1952, 688.

Japan—
proposed labour law would curb electrical and coal strikes, 817.

U.S.A.—
I.L.A. strike postponed—injunction imposes truce in Eastern ports, 1605.
establishment of Unitypo Inc. to compete with publishers where printers on strike, approved at convention of International Typographical Union (A.F. of L.-T. and L.C.), 1264.
end of 14-year-old strike at Peterson Chevrolet Company, 1365.
rail union "will not condone" slowdowns—end of five-day strike on Pittsburgh railroad, 878.

Classification by Industries

Construction—buildings and structures —
building trades workers, Hamilton, 790; Kimberley and Waneta, B.C., 790; Sarnia, 1097.
carpenters, Comox, B.C., 790, 1403; Cornwall, 344; Fort William, 344, 497, 639, 789, 957; Fort William and Port Arthur, 1875; Kamloops, 1712; London, 1403, 1711; Moncton, 1711, 1873; Toronto, 1239; Windsor, 1875.
electricians, apprentices and helpers, Sarnia, 1403.
painters and decorators, Windsor, 1239.
plumbers, pipefitters and apprentices, Edmonton, 169, 343.
sheet metal workers, Fort William and Port Arthur, 344, 497.
truck drivers, Ioco, B.C., 1239.

Strikes and Lockouts—*Con.*

Classification by Industries—*Con.*

Construction—miscellaneous—
pipe line installers, Kamloops, 958.
power project drillers and powdermen, McArthur Falls, Manitoba, 498.

Fishing and Trapping—
salmon, fishermen, seiners, gillnetters, British Columbia, 1238.

Manufacturing—animal foods—
meat packing plant workers, Vancouver, 1874.
packinghouse workers, Stratford, 790, 957, 1095.

Manufacturing—boots and shoes (leather)—
shoe factory workers, Grand'Mère, 168, 343; Preston, 1096, 1237, 1401, 1577, 1709, 1871.

Manufacturing—metal products—
aero engine mechanics, Vancouver, 1578, 1709.
aluminum foundry moulders, Wallaceburg, 498.
aluminum ware factory workers, Wallaceburg, 790, 957, 1095, 1237, 1401.
automotive stamping factory workers, Windsor, 1875.
boiler factory workers, Napanee, 790.
bus factory workers, Fort William, 1711.
cigarette lighters factory workers, Toronto, 1711.
die casting factory workers, Hamilton, 958.
electrical apparatus factory workers, Guelph, 790; Hamilton, 1578; St. Catharines, 1578.
foundry and machinery factory workers, Hamilton, 168.
household appliances factory workers, Guelph, 958, 1095.
jewellery factory workers, Vancouver, 344, 497, 639, 789, 957, 1095, 1237, 1401.
lighting fixtures factory workers, Toronto, 958.
machine and tool factory workers, Ingersoll, 1711.
machinery factory workers, Toronto, 640.
machinists and moulders, Vancouver, 640, 789.
metal factory workers, Toronto, 1711.
metal furniture factory workers, Toronto, 1239.
motor vehicle factory workers, Toronto, 1239, 1402; Windsor, 1875.
refrigerator factory workers, Granby, 1402, 1577.
skate factory workers, Kitchener, 1097, 1237, 1401, 1577, 1709, 1872.
spring factory workers, Hamilton, 1239, 1402, 1577, 1709, 1872

Strikes and Lockouts—*Con.*

Classification by Industries—*Con.*

Manufacturing—metal products—*Con.*

steel mill workers, Sault-Ste-Marie, 790; Winnipeg, 1711, 1872.

steel mill workers, painters, Trenton, 498.

CURRENT

JANUARY 15, 1953

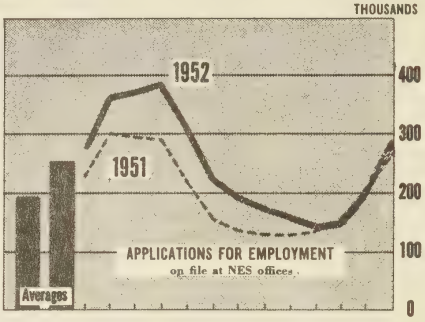
manpower and labour relations

REVIEW

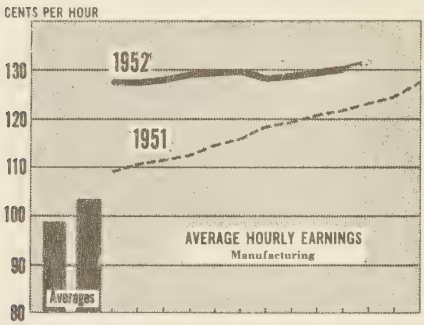
Current Labour Market

THE overall level of employment in Canada declined slightly during December. This decline was due largely to seasonal layoffs in transportation, construction, agriculture, fishing and their related industries. Logging employment fell by mid-December to lower levels for the winter season than had been reached for a number of years. With the exception of reduced operations in these industries, which contributed to increased seasonal unemployment, manpower requirements continued firm during the month and consumer durable goods and producer goods industries operated at employment levels equal to or exceeding those for the same month a year earlier.

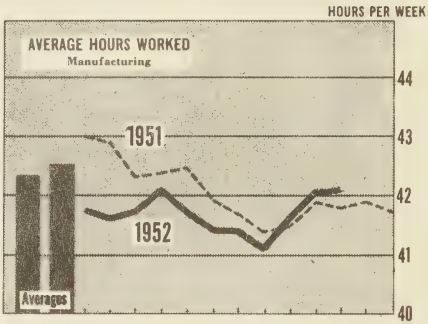
The Labour Force Survey, now being conducted on a monthly basis by the Dominion Bureau of Statistics, provides an overall picture of current manpower utilization patterns. For the week ending December 13, 1952, it was estimated that 5,276,000 persons were in the active civilian labour force, a decrease of 14,000 from the figure reported for the week ending November 22, 1952. Of this total, 4,558,000 persons were at work for 35 hours or more during the week, 459,000 for fewer than 35 hours, 127,000 with jobs but not at work and 132,000 without jobs and seeking work.



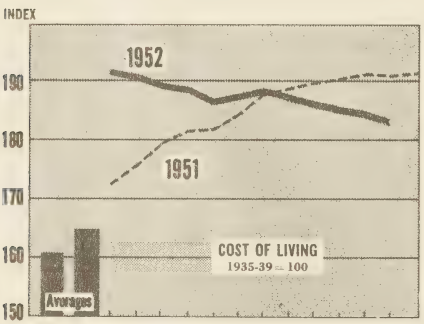
Of the 459,000 persons working fewer than 35 hours during the week, about 225,000 usually work part-time. Of the remaining 234,000 persons, 30,000 were on short-time, 11,000 were laid off for part of the week, 30,000 were ill part of the week, 49,000 were on vacation or kept away by bad weather and the remainder, 114,000, were affected by industrial disputes and religious holidays or had lost or found jobs during the week.



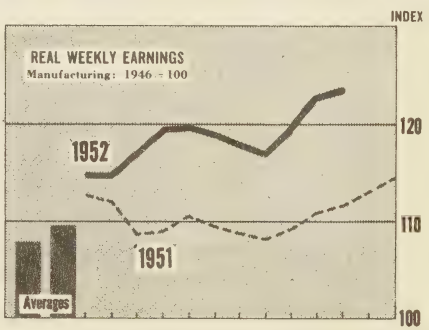
Of the 127,000 persons estimated to be without jobs and not working at all during the survey week, illness (66,000), vacations (13,000) and layoffs (24,000) were mainly responsible for their idleness. Bad weather and industrial disputes were other contributing causes.

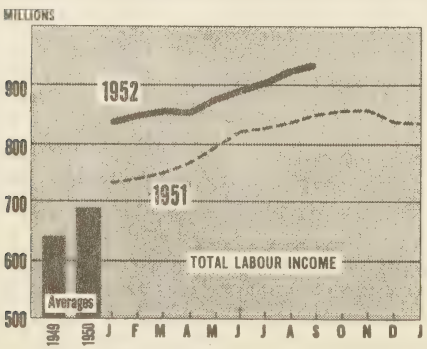


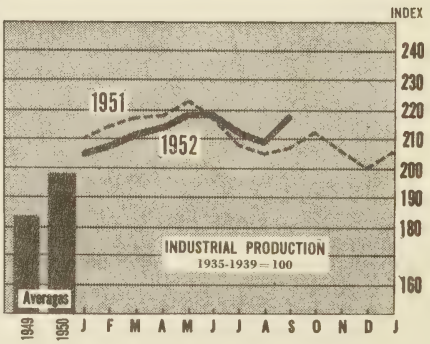
A Labour Gazette *Feature* by Economics and Research Branch Department of Labour, Ottawa



CURRENT LABOUR TRENDS







It was found that 132,000 persons were without jobs and seeking work during the survey week. Another 16,000 who did work during part of the week were also actively seeking other work, making a total of 148,000 persons actively seeking work during the week ending December 13. This represents an increase of about 13 per cent from the previous survey week in November.

Supplementary information on regional employment patterns is available from data on employment registrations at local National Employment Service offices. Between November 20 and December 11, 1952, there was a seasonal rise in the number of applications on file of nearly 58,000 for all regions, bringing the total to 237,200 at the latter date. As in November, applications on file in Quebec (75,900) and in the Atlantic region (31,200) were significantly higher at December 11 than a year earlier. On the other hand, the total number of registrations for Ontario (61,200) was some 18,000 lower than the previous year, while for the Prairie (32,300) and Pacific (36,600) regions the numbers did not greatly differ from those of mid-December, 1951.

Although seasonal unemployment increased during December, 1952, there was ample evidence suggesting that most economic activities were at higher levels than in the previous year. Retail sales during November, 1952, were 7.8 per cent higher in value than in November, 1951, while the value of department store sales during December, 1952, was higher by 15 per cent than in December, 1951. Domestic exports headed for another record year, November, 1952, figures being higher by seven per cent in real volume terms than those of the previous year. Motor vehicle shipments were up by 47 per cent on a year-to-year basis during November, while October housing starts (8,529) were nearly double those of the previous October.

Economic activity of this kind was reflected in year-to-year gains in employment levels. At November 1, 1952, employment in manufacturing industries was more than four per cent higher than a year earlier. Increased consumer sales were reflected in year-to-year employment gains in clothing (10 per cent), furniture (9 per cent), automobiles and parts (9 per cent) and heating and cooking appliances (7 per cent). The impact of the defence program was clearly shown by a year-to-year increase of nearly 60 per cent in employment in the aircraft industry and nearly eight per cent in the manufacture of electrical apparatus.

In forestry, on the other hand, employment decreased about 18 per cent, compared with November 1, 1951. Recent information published by the Canadian Pulp and Paper Association, covering about 70 per cent of total logging employment in Eastern Canada, indicates a year-to-year decline of about 35 per cent in employment in Eastern pulpwood cutting at the end of December, 1952.

The steady growth of employment in construction during postwar years is significant because of the wide seasonal fluctuations in this industry. During the month of October, 1952, total employment in this industry fell by more than four per cent and in one component, highways, bridges and streets, employment fell by 10 per cent. At the end of October, however, employment levels were still about five per cent higher than in 1951.

The contrast between the employment situation in the industrial and agricultural regions in Canada is clearly brought out in the following article on local labour market conditions (page 6). As the article shows, the labour market was steadier during December in the major industrial and metropolitan areas than in the lighter industrial and outlying agricultural areas, where labour surpluses developed.

Industrial Relations

Wage-rate increases were provided by almost 97 per cent of 879 collective agreements which were renewed by collective bargaining during the first nine months of 1952 and which were available for analysis by the Economics and Research Branch of the Department of Labour. The agreements covered 320,000 workers, 92 per cent of whom received increases. Thirty per cent of both the number of agreements and of workers fell in the range of increases of 10 to 15 cents per hour. Increases above this range were featured in 42 per cent of the agreements, covering 27 per cent of the total number of workers involved. A number of other agreements were either renewed without change or did not expire during the period under review. A detailed analysis of these wage-rate changes will appear in the February issue of the *Labour Gazette*.

The managements of the major Canadian railways and the unions representing their non-operating personnel reached agreement on the terms of their new contracts on December 19, 1952. These new contracts will run for one year, replacing those signed after arbitration in 1950 which ran for two years. A wage increase amounting, on the average, to approximately 16 cents an hour was agreed upon, following the majority recommendation of the conciliation board, as given early in December, 1952.* This increase was made retroactive to September 1. Another major item in the new agreement is the establishment of a compulsory check-off of union dues. In future, all employees in the bargaining group must pay dues or their equivalent whether or not they are members of the union. Approximately 144,000 employees were affected.

Explanatory Note

Labour force estimates are based on a sample survey of 30,000 households chosen by area sampling methods in more than 100 different areas in Canada. They are subject to sampling error. In general the smaller the estimate, the larger the relative sampling error. The estimates, however, do show the numbers in the various labour force categories with sufficient accuracy for practical purposes.

Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

* See page 55.

Current Labour Statistics

(a) Estimated by DBS on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.

(b) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Local Labour Market Conditions

The Labour Market—illustrated by the proportion of paid workers within each of the four labour market groups to all paid workers.

IN evaluating the significance of the number of labour market areas in the various categories of the table below, it is necessary to keep in mind the marked seasonal variations in labour requirements throughout the year in Canada. A large number of areas have labour surpluses each year from December to March but these surpluses decline sharply and shortages often appear from July to October.

During December, 27 areas moved into Group 1 of the surplus category. The number in Group 2 of this category increased by 13, the number in the balance category decreased by 32 and that in the shortage category by eight.

The higher demand for labour in manufacturing industries and the unusually low labour requirements in logging operations are clearly reflected in the year-to-year comparisons of the local labour market classifications. At the beginning of 1953, 17 metropolitan and major industrial areas were in the balance and shortage categories, compared with 12 at the beginning of 1952. On the other hand, there were only 31 major agricultural and minor areas in these categories at the beginning of 1953 compared with 52 a year earlier. These year-to-year changes largely reflect the predominance of manufacturing activity in the metropolitan and major industrial areas and the importance of logging and agricultural activities in many of the other labour market areas.

Although there were 16 fewer areas in the balance and shortage categories at the beginning of 1953, compared with a year earlier, it should be noted that the total number of paid workers in these categories remained unchanged. The chart on this page reveals that at January 1, 1953, areas with balanced labour markets accounted for 58 per cent of the paid workers covered by this survey.

ATLANTIC

The seasonal influences which had caused a reduction of outdoor activity during October and November became more pronounced in December and contributed to a further lowering of the employment levels in such industries as fishing, construction, logging and sawmilling. Pulp cutting was also reduced during the month as a result of the usual closing of camps for the Christmas holiday season. On the whole, logging employment during December was consistently lower than in December, 1951. In view of the smaller log cut planned this winter, this condition is expected to continue.

Although employment in manufacturing industries declined slightly in the fall months, it maintained a level somewhat above the same period in 1951. There was considerable activity in the shipbuilding and repair industries and in the manufacture of iron and steel products during 1952 and there are indications that manpower requirements in these particular industries may be higher this winter than last.

The diminishing demand for labour during December resulted in the reclassification of seven areas into the labour surplus groups. This brought 16 of the 21 areas surveyed into the labour surplus category.

Metropolitan Areas. Job applications registered with the NES office in St. John's, Nfld. doubled during December bringing the area into Group 1 of the labour surplus category. Most of this decline in employment was seasonal and was largely caused by reduced labour requirements on local construction sites and in developments in the outlying areas.

Major Industrial Areas. Labour supply and demand continued in balance in Corner Brook and Halifax during December. In the remaining four major industrial areas, however, labour surpluses accumulated because outdoor construction activities declined and alternative employment opportunities did not appear. The surplus was particularly large in Moncton as seasonal lay-offs in heating equipment firms swelled the labour supply.

Major Agricultural Areas. Construction work at the RCAF base at Greenwood declined during December with the result that the Kentville area changed from one of balance to Group 2 of the labour surplus category. The labour surplus continued in Charlottetown where activities in agriculture and fishing, the two main industries, were suspended for the season.

Minor Areas. The decline in employment was sufficiently marked in the Bathurst, Campbellton and Newcastle areas to bring them into Group 1 of the labour surplus category. Since woods employment is the mainstay of the economy in these areas, the low level of employment in the industry at the end of 1952 was the principal factor contributing to the surplus labour supply.

QUEBEC

The higher year-to-year employment level maintained in manufacturing industries helped to offset the rapid decline in seasonal activities in Quebec during December. The textile, clothing, leather, boot and shoe and various defence-connected industries were employing more workers at the end of 1952 than a year earlier. Retail sales continued to exceed those of 1951 and the Christmas trade was considerably greater in 1952 than a year earlier. Seasonal factors, however, exerted a strong influence on the employment situation as a whole. Such seasonal activities as exploration, road work and construction either could not be carried on at all or declined sharply. In addition, employment levels in log-cutting and sawmilling industries were considerably reduced. The number of registrations for employment at NES offices rose rapidly in December to a total slightly higher than that of the previous year. A reduction in the number of women seeking work was offset by the greater number of men registered for employment.

Metropolitan Areas. In December labour demand and supply in Montreal remained generally in balance. Employment in manufacturing industries continued higher than at the same time in 1951. Job opportunities were created as various plants completed the expansion of their facilities. In the aircraft and several other industries, shortages of tool and die makers, machinists and sheet-metal workers existed. As winter set in, however, labour supplies increased and resulted in surpluses of construction workers, seamen, farm workers and general unskilled labourers.

In Quebec city, the effects of this year's reduced logging cut were more pronounced during December than a month earlier and resulted in the area being reclassified from Group 2 to Group 1 in the labour surplus category. The manufacturing industries were more active than a year earlier and the number of registrations by women at NES offices was substantially lower than in December, 1951, when the boot and shoe, clothing and textile industries were operating at reduced levels. Reduced logging operations and declines in other seasonal work, however, more than offset these favourable factors.

Major Industrial Areas. Of the five areas in this group, three were classified in a different category at January 1 than at the beginning of December. Shawinigan Falls and Three Rivers changed from Group 2 to Group 1 in the labour surplus category and Sherbrooke from the balanced to Group 2 of the labour surplus category. These shifts appeared to be the result of growing seasonal slackness and the smaller wood cut.

Major Agricultural and Minor Areas. Logging is the main source of employment during the winter in many of these areas. The decreased wood cut at the end of 1952 was the principal reason for most of these areas having labour surpluses. Only Ste. Anne de Bellevue and Farnham remained in the balanced category.

ONTARIO

During the fourth quarter of 1952 industrial employment in Ontario exceeded the 1951 level as the defence-connected industries continued to expand, increased steel capacity came into production and sustained demand for consumer goods held employment in these industries firm. Moreover, in the latter part of 1952, the volume of housing starts was considerably higher than in the same period in 1951. This, together with favourable weather conditions, resulted in the maintenance of higher than usual levels of employment in construction work for December in most parts of the Ontario region.

The gradual reduction in outdoor construction activity during December and the early part of January, however, combined with a reduction in the level of woods work this winter as compared with a year earlier, caused some labour surpluses in a few areas. Nevertheless, 27 of the 40 areas under review still had approximately balanced labour markets at the end of 1952. Extra Christmas sales staff was released during the last week in December or the first week in January and some womens' clothing manufacturing plants closed down for a few weeks before beginning production of their spring lines.

Metropolitan Areas. The fact that labour requirements of manufacturing industries in Toronto and Ottawa-Hull and of the construction industry in Hamilton were higher in December, 1952, than a year earlier reduced the effects of seasonal employment declines in these areas. Some slackening in construction activity and in a number of seasonal manufacturing industries, such as womens' clothing, relieved the shortage of labour in Toronto so that in December all three metropolitan areas had balanced labour markets. No labour shortages were reported to the NES except for machinists, toolmakers and machine shop workers.

Major Industrial Areas. Labour requirements did not change appreciably in these areas during December. No large lay-offs and very little hiring occurred in the manufacturing industries. As a result, the majority of these areas were still in the balanced labour market category at the beginning of January. However, lay-offs in a textile plant producing for the rubber industry increased the labour surplus in Cornwall and resulted in its reclassification from Group 2 to Group 1 of the labour surplus category. Sarnia was brought into a surplus category by the gradual reduction in construction activity, which, combined with the reduced logging cut, also caused surpluses in Peterborough and Sudbury. Brantford and Oshawa continued to have a labour surplus since the farm implement and automobile industries were still operating at seasonally low levels.

Major Agricultural and Minor Areas. Of the 21 major agricultural and minor areas under review, 15 were still in approximate balance at January 1 but the gradual seasonal decline in construction resulted in surpluses of carpenters, painters and unskilled construction workers in many of the areas. This, together with the seasonal slack in food processing, the reduction in woods activity and the closing of navigation on the Great Lakes, caused some labour surplus in Bracebridge, Chatham, Leamington, North Bay, Owen Sound, Port Colborne and Trenton.

PRAIRIE

During the last quarter of 1952, employment levels were higher than at the same time in 1951 in almost all parts of the region. Harvesting labour requirements were exceptionally heavy and in addition, non-agricultural firms showed a year-to-year employment gain of approximately 13,000 workers. A large part of this increase stemmed from the demands of expanding oil and chemical industries in Alberta. Elsewhere in the region the main stimulus came from defence construction projects, which contributed to the strong demand for construction workers during the fall. Since the value of uncompleted defence construction contracts at the end of November was about one-third greater than a year earlier, this work is again expected to be a significant factor underlying total labour demand in the early spring.

The supporting effect of increasing industrialization, defence construction work and large grain crop payments extended into December, partially offsetting the decline in agricultural activity during the month. This, in addition to the usual migration of workers to British Columbia, resulted in 13 of the 21 areas, including two of the three metropolitan centres, having a balanced labour market. Surpluses in the remaining eight areas were partly the result of the relatively small number of workers employed in pulp cutting this winter.

Metropolitan and Major Industrial Areas. Although the number of idle workers rose in all three metropolitan areas, the increase was not sufficiently great in Calgary and Edmonton to require reclassification from the balanced category. There were some lay-offs and a greater degree of short time in coal mining than in previous months but other decreases in employment were relatively small and mainly seasonal. Employment in packing plants increased steadily and activity in construction work continued at a higher level than in 1951. A larger proportion of wage-earners was registered for work at the NES office in Winnipeg than in Calgary or Edmonton, although the number was slightly smaller than at the same time a year earlier. Some lay-offs occurred in foundry plants but the level of operations in construction, secondary textiles and meat-packing was reported to be higher in December, 1952, than in the previous year.

In the Fort William-Port Arthur area, employment in logging work was about 50 per cent below the level of the previous year. During December, however, a substantial number of workers was hired as a result of the strengthening in the demand for sulphite pulp.

Other industries in the metropolitan and major industrial areas showed little change during the month, with the exception of aircraft manufacturing in which some employment expansion took place.

Major Agricultural and Minor Areas. By the end of December, only six of the 17 areas in these classifications were in the surplus category. The completion of sugar refining and an unusually low level of coal production increased the number of idle workers in Lethbridge and Red Deer. In Dauphin, bush work failed to absorb the usual number of workers released by the completion of rural electrification and construction work. Suspension of work on defence projects contributed to labour surpluses in Portage la Prairie and Prince Albert.

Employment conditions in the agricultural and minor areas experienced the deterioration usually accompanying the decline in seasonal activities such as agriculture and construction.

PACIFIC

After two months during which non-agricultural employment attained record levels, labour requirements eased considerably during the second half of December and labour surpluses mounted to a level well above that of a month earlier and approximately equal to that of December 1951. In addition to the seasonal closing of food processing plants and the usual year-end closing of logging and construction operations, a number of other factors combined to reduce employment in all parts of the region. These included a lower export demand for lumber, base metal and fish products, an unsettled dispute between fishermen and operators over the price of herring, which led to a cessation of fishing operations, and a continuing power shortage in the southern interior which caused sizeable layoffs in several mining and smelting firms.

By January 1, labour surpluses had developed or increased in all but one of the nine labour market areas surveyed. At the beginning of December only four areas had surpluses.

The reduction of these surpluses during January will probably depend to a considerable extent on weather conditions. Because of the relatively light snowfall it was expected that a good deal of labour would be employed earlier than usual in the new year. Many logging, sawmilling and large construction operations were scheduled to resume work during the first week of the month.

Metropolitan and Major Industrial Areas. The usual exodus of workers from distant construction sites and logging areas contributed to the increase of 46 per cent in the number of workers registered with NES offices in Vancouver-New Westminster. Hiring in manufacturing industries was low. Fish canning was at a standstill and activity in machine shop and shipbuilding yards at a reduced level.

Although some labour surplus developed in Victoria, industrial activity was greater there than in other areas of the province. Employment in the construction industry was above average for the time of year. Temporary lay-offs occurred in shipbuilding yards but the volume of defence work on hand and in prospect indicated increasing activity in the near future.

Minor Areas. Four areas in this category were in the Group 1 labour surplus classification during December. In Prince Rupert and Prince George the loss of herring production and the completion of some phases of the Aluminum Company of Canada development at Kitimat reduced employment opportunities. The situation was further affected by an unusually large inflow of workers from other provinces. In Chilliwack employment fell markedly as a result of the completion of two hydro-electric projects and the early closing of logging camps. The surplus in Penticton was of a more seasonal nature, resulting mainly from the decline in agricultural activity and fruit packing. A greater amount of construction work is being done in this area than in former years and this may require more workers than usual during January.

Explanatory Note

In this section, the system of classifying the labour market situation in individual areas is an analytical device whose purpose is to give a clear and brief picture of local labour market conditions based on an appraisal of the situation in each area. In considering the significance of the number of areas in each category, it is necessary to keep in mind the marked seasonal fluctuations in labour requirements in Canada. Labour surpluses are consistently highest in each year from December to March and lowest from July to October.

The criteria on which this classification system is based are as follows:

Group 1: Labour Surplus. Areas in which current or immediately prospective labour supply exceeds demand in almost all of the major occupations. This situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 9.9, 11.9 or 13.9 per cent, depending on the size and character of the area.

Group 2: Labour Surplus. Areas in which current or immediately prospective labour supply exceeds demand in about half of the major occupations. The situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 5.9 or 6.9 per cent but less than 10.0, 12.0 or 14.0 per cent, depending on the size and character of the area.

Group 3: Balanced Labour Supply. Areas in which current or immediately prospective labour demand and supply are approximately in balance for most of the major occupations. This situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 1.9 or 2.4 per cent but less than 6.0 or 7.0 per cent, depending on the size and character of the area.

Group 4: Labour Shortage. Areas in which current or immediately prospective labour demand exceeds supply in most of the major occupations. The situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is less than 2.0 or 2.5 per cent, depending on the size and character of the area.

The regular labour market analyses conducted by the Department of Labour in the postwar years indicate that the percentage ranges mentioned are usually symptomatic of the differing labour market situations designated in the above categories.

Information on labour market conditions in local areas is obtained mainly from monthly reports submitted by each of the local offices of the National Employment Service. This information is supplemented by reports from field representatives of the Department of Labour who regularly interview businessmen about employment prospects in their companies, statistical reports from the Dominion Bureau of Statistics and relevant reports from other federal government departments, from provincial and municipal governments and from non-governmental sources.

To facilitate analysis, all labour market areas considered in this review have been grouped into four different categories (metropolitan, major industrial, major agricultural, and minor) on the basis of the size of the labour force in each and the proportion of the labour force engaged in agriculture. This grouping is not meant to indicate the importance of an area to the national economy. The key to this grouping is shown in the map chart on page nine and in the listing opposite the map.

The geographical boundaries of the labour market areas dealt with in this section do not coincide with those of the municipalities for which they are named. The Toronto labour market area, for example, includes the towns of New Toronto, Mimico, Long Branch, Weston, Leaside and Swansea, as well as other parts of the county of York, although not all of it. In general, the boundaries of these labour market areas coincide with the district serviced by the respective local office or offices of the National Employment Service.

Not all areas in Canada are dealt with in this section. Information currently available about labour market conditions in areas with a labour force of fewer than 10,000 workers is not sufficient to permit adequate analysis. The 122 labour market areas covered in this analysis include 90 to 95 per cent of all paid workers in Canada.

Plant Expansion and Employment Opportunities in Manufacturing Industries, 1952

THE regular survey conducted by the Economics and Research Branch of the Department of Labour on the effects of industrial expansion on employment shows that more new jobs were provided by expansion of plant capacity in manufacturing industries in 1952 than in any of the past five years. The total of 30,000 new manufacturing jobs recorded during 1952 was nearly double that of the two previous peak years, 1948 and 1951. Significant changes have occurred, however, in the pattern of plant expansion in manufacturing since early postwar years. Early postwar expansion was primarily in the consumer durable and non-durable sectors of manufacturing. After the Korean War began, the emphasis gradually shifted to the field of defence-connected industries.

In terms of specific industries, the greatest plant expansion in 1952 occurred in the Canadian aircraft industry, which provided an estimated 12,000 new jobs. The electrical apparatus industry provided 4,300 new jobs and the iron and steel industry 3,400. Likewise the high level of plant expansion in the manufacture of chemical products resulted in at least 1,400 new jobs. Most of these jobs were related to Canada's defence program.

Regionally, Ontario accounted for more than 50 per cent of the new jobs and Quebec for about 25 per cent, the remainder being distributed in the Atlantic, Prairie, and Pacific regions. Industrial expansion in the Atlantic region was somewhat less in 1952 than in 1951 and much of it was concentrated in Newfoundland.

Canada's defence effort is strongly directed towards aircraft production with the result that more new plants and plant extensions were completed in the aircraft and parts industry in 1952 than at any time since the Second World War. The completion of 18 new plants and plant extensions created a record number of new jobs in one year for one industry. This expansion and the heavy volume of hiring in the industry are reflected in the fact that reported employment in the aircraft and parts industry increased by approximately 11,500 workers from January 1 to October 1, 1952. In addition, several plants and plant extensions at present under construction will come into operation in 1953. Of the 12,000 new jobs created in the industry, 8,600 were in Ontario, about 3,000 in Quebec, and 700 in the Atlantic region.

Expansion in the electrical apparatus industry, also greater than at any time in the past five years, was mainly in the fields of electronics and television and with less emphasis on consumer goods than in pre-

vious years. The 30 new plants and plant extensions which began operations in this industry during 1952 resulted in about 4,300 new jobs. This was an average labour requirement of 140 workers for each new plant or extension. More than 3,000 of these jobs were in Ontario, 600 in Quebec, and approximately 100 in other regions of the country.

In the iron and steel industry, most of the 3,400 new jobs created by plant expansion were in firms producing tools, machinery, and other industrial equipment, a demand largely stimulated by Canada's defence effort. One large plant extension was designed to produce marine turbines for naval vessels. The producers of basic steel are currently completing major expansion projects. One of Canada's major steel producers recently completed the largest blast furnace in the country. This, in addition to further expansion on the same site, will add 650,000 tons to the annual steel output. Most of the expansion in this industry was in Ontario and Quebec.

Considerable industrial expansion also took place in the chemical industry and both the volume of investment and the number of new jobs created in 1952 exceeded the 1951 levels. In 1952, 36 new plants and plant extensions began operations. One chemical company completed three new plants and two plant extensions. Because of the relatively low labour content characteristic of this industry, the total of 1,400 new workers recorded represents a large increase in production. The new jobs in the chemical industry were distributed through all regions except the Atlantic, the largest increase being in Ontario, followed by Quebec and the Prairie and Pacific regions.

The number of new jobs created by expansion of plant capacity in the wood products manufacturing industry exceeded any previous figures reached in the survey of the Economics and Research Branch to date. At least 1,400 workers were required to man new plant facilities in 1952. A large proportion of the new jobs were in British Columbia where major expansion of the plywood industry required 600 workers. In both Ontario and Quebec, at least 300 workers were required in new furniture and woodworking plants and sawmills.

The level of plant expansion was high also in the non-metallic mineral products industry, the bulk of it being in the asbestos, abrasives and cement products sectors. The expansion in this industry was fairly evenly distributed throughout all regions of the country. During 1952, at least 1,300 workers were required to staff the new plant facilities.

Notes of Current Interest

New Federation Formed By Quebec CCL Unions

Labour unions in Quebec affiliated with the Canadian Congress of Labour founded at Montreal, early in December, the Quebec Federation of Industrial Unions (CCL).

Some 200 delegates, representing about 50,000 workers in the province, took part in the conference which led to the setting up of the new federation. This brings to seven the number of provincial federations of the CCL.

R. J. Lamoureux, President of the Montreal Labour Council and Regional Director of the United Steelworkers of America, who was chairman of the founding conference, was elected President of the new Federation.

"The setting up of this new trade-union organization," he stated, "shows that the Quebec section of the Canadian Congress of Labour has reached adulthood and that it is asserting its maturity."

During the two-day conference, a number of speakers made an appeal for unity within the Canadian labour movement, in the hope of establishing an organic link between the major Canadian Labour organizations.

Raoul Trépanier, federal Department of Labour Conciliation Officer, was one of those who asked the new Federation to make itself the apostle of unity in the labour movement in Quebec. "Do not keep up these rivalries which, when all is said and done, have weakened us more than they have helped us," said Mr. Trépanier. "It seems to me, for example," he suggested, "that it would be better for the province's labour organizations to get together when they go every year to make their representations at Quebec, rather than undertaking each its little pilgrimage alone."

Donald MacDonald, Secretary-Treasurer of the CCL, also stressed the need for unity within the labour movement. "The problem of unity in the Canadian labour movement is a complex and difficult one," he said at the closing banquet. "Nevertheless, we are prepared to support any effort which aims at bringing about this unity. All we ask," he added, "is that people who are concerned with this question of unity should tackle it with as sincere a desire as we have to see it worked out."

During the conference, the delegates also heard Paul Emile Côté, Parliamentary Assistant to the Minister of Labour; Jean Paul Ferland, Conciliation Officer for the provincial Department of Labour; and Mrs. Thérèse Casgrain, Quebec CCF leader.

In addition to ratifying their new constitution, the delegates also adopted a number of resolutions, requesting, among other things, that no union, whatever its allegiance, should cross another union's picket line; that the Superior Labour Council should meet more often; and that the electoral map of Quebec be reformed. One of the first gestures of the new Federation was to set up a political action committee.

In addition to President Lamoureux, the Executive Committee of the Quebec Federation of Industrial Unions is made up of the following officers: Hyman Reiff and Joseph Tessier, Vice-Presidents; Roméo Mathieu, Secretary; Roméo Leroux, Treasurer; René Martin, Gérard Freve, Henri Jean, Rolland Goedike, L. McCormack, D. Archambault and L. Packwood, Directors.

Work Likely in 1953 for All Steelworkers—Gregg

A great many industrial projects, including the St. Lawrence seaway and the aluminum development at Kitimat, B.C., will likely require all available steel workers in 1953, the Hon. Milton F. Gregg said recently in reply to a delegation of steel and auto workers.

Headed by C. H. Millard, Canadian Director of the United Steelworkers of America, the 14-man delegation submitted a seven-point plan to the Government designed to overcome a slump in farm machinery production. It included giving away free tractors and other farm implements to underdeveloped countries; the establishment of a joint industry, labour and government council to stabilize the industry and reduce seasonal layoffs; and the channelling of federal defence contracts to the industry to use up idle production capacity and give employment to the large numbers of workers laid off recently in the Hamilton, Toronto, Woodstock and Brantford areas.

Mr. Gregg said the Government will consider the plan.

67040—2

Slight Employment Drop Recorded at November 1

Employment in Canada's principal industries was slightly lower at the beginning of November than a month earlier but higher than the November 1, 1951, level, according to the Dominion Bureau of Statistics. Payrolls and average weekly wages and salaries, however, climbed to record levels.

The advance index of employment at November 1 stood at 191·9, compared with 192·6 at October 1 and 186·4 at November 1, 1951. The payrolls index was 454·6 at November 1, 452·2 at October 1 and 413·4 at November 1, 1951. Weekly wages and salaries averaged $55.63 at November 1, $55.12 at October 1 and $52.05 on November 1, 1951.

Fifth Successive Climb, Oct. Housing Starts Rise

Starts on the construction of new dwelling units rose again in October for the fifth successive month, reversing the trend of the first five months of the year. Completions increased in October, after decreases in all earlier months of 1952 except August.

Number of dwelling units on which construction was started in October was 9,810, compared with 8,529 in September and 4,977 in the corresponding month in 1951. This brought the cumulative total for the first 10 months of 1952 to 71,850, compared with 62,564 in the similar 1951 period.

Completions Total 9,510

Completions in October totalled 9,510 as compared with 5,819 in the preceding month and 8,164 in the same month of 1951. In the January-October period completions totalled 56,295 as compared with 65,969 in the similar 1951 period. The carry-over of uncompleted dwellings in various stages of construction at the end of October was 59,334 compared with 55,180 a year earlier.

Housing Starts Higher In U.S. in October

Housing starts in the United States totalled 101,000 during October, an increase of 3,000 over September and 11,000 over October 1951, according to preliminary estimates of the U.S. Labour Department's Bureau of Labour Statistics. The September-October increase was almost entirely in private housing, which totalled an even 100,000 units in October.

So far this year, 966,400 new permanent non-farm dwelling units were put under construction, 10,400 units above volume for the first 10 months of 1951 but about a quarter of a million under the level for the same period in the peak year 1950. Private housing in 1952 was 29,100 units above the previous year's mark while public housing was lagging by 18,700 units when the first 10 months are compared. Altogether, new private housing begun to the end of October 1952, totalled 917,500 units and public housing, 48,900 units.

Britain Built More Homes in September

September 1952, was Britain's best month since the war for the number of permanent houses completed.

According to the U.K. Central Office of Information, 22,323 permanent houses were completed during the month, compared with 17,168 in September 1951.

The number of men employed on permanent house construction and the preparation of housing sites at the end of September was estimated at 271,900.

Up to the end of September, 1,344,588 houses have been completed under the post-war program. Of this number, 1,187,442 are permanent.

Name New Co-Chairman Of Manpower Council

John W. Pickersgill, Clerk of the Privy Council, has been named co-chairman of the National Advisory Council on Manpower. He succeeds Norman Robertson, his predecessor as Clerk of the Privy Council, who is now High Commissioner to the United Kingdom.

Arthur MacNamara, Deputy Minister of Labour, is the other co-chairman of the 32-member body that advises the government on manpower problems.

N.B. Labour Minister Honoured by Union

Local No. 1 of the Bricklayers, Masons, and Plasterers' International Union of America (AFL-TLC) in Saint John, N.B., has made Hon. A. E. Skaling, Minister of Labour for New Brunswick, its honourary president for life. Mr. Skaling was President of the local for 22 years, resigning from the post December 1, because of his government duties.

Railway Dispute Settled At Top-level Meeting

The dispute between Canada's major railways and 17 non-operating railway unions was settled December 19.

The settlement provides for the average wage increase of 16 cents an hour recommended in the conciliation board's majority report (*see* p. 55) and for the compulsory check-off of union dues for all workers in the bargaining unit, union members or not. This latter provision is in excess of the board's recommendations.

Another gain for the union was the retroactivity of the wage increase, dated back to September 1, expiry date of the former agreement. On December 9 the railways had announced that they were putting into effect, as of December 1, the 16-cents-an-hour boost recommended by the board.

Announcement of the settlement followed discussions between union representatives led by Frank Hall, chairman of the negotiating committee, and Presidents Donald Gordon of the Canadian National Railways and W. A. Mather of the Canadian Pacific Railway Company.

The unions originally rejected the board's recommendations, stating in their letter of rejection that "the views of the employees' representatives are substantially in accord with" those in the minority findings.

The new contract runs for one year from December 1, 1952.

Union Shop, Check-off Won by U.S. Rail Unions

A union shop and check-off agreement was signed recently between 17 co-operating railway labour organizations and several railroads in the Eastern United States.

The agreement covers maintenance of way employees, telegraphers, signalmen, clerks, freight handlers, firemen and oilers, marine employees, restaurant employees, dispatchers, yardmasters, machinists, electricians, metal workers and other allied trades.

All employees under the contract must, as a condition of continued employment, become members of the union representing their craft or class within 60 calendar days of the date they first perform compensated service as such employees after the effective date of the agreement. Thereafter they must maintain membership in the union, except that such membership is not required of any individual until he has performed compensated service on 30 days within a period of 12 consecutive calendar months.

Employees with seniority who are transferred to full-time employment not covered by the agreement or who go on furlough or leave may maintain membership or not at their option. On their return they must again become members within 30 days.

Dues, initiation fees and assessments must be uniform for all employees in the same status at the same time in the same organizational unit. No employee is required to become or remain a member of the union unless membership is available to him on the same terms and conditions as are generally applicable to all members.

Each employee will be considered by the employer to have met the provisions of the agreement, and so be eligible for continuing employment, unless and until such employer is advised to the contrary in writing by the union. If and when the union so advises, and if the employee does not demand a hearing before the employer and a representative of the union, the employer will terminate the employee's seniority and employment within 30 days. On the other hand, the employee may follow up an adverse hearing with an appeal to the highest officer of the company and beyond this to the Chairman of the National Mediation Board.

Periodic dues, initiation fees and assessments required for membership in the union must be deducted from the wages of employees by the employer, who will pay these amounts to the appropriate officer of the union. However, the employee must furnish the employer with a written assignment to the union of such dues, fees and assessments before this deduction can become effective.

The same contract terms respecting the union shop were accepted in December by two railways in the Western United States. They were the Chicago and North Western Railway and the Missouri-Kansas-Texas Railroad. The contracts, negotiated by the same 17 non-operating rail unions, took effect January 1.

Until the signing of the two contracts, the western lines had presented a solid front against the union shop.

The annual report of the federal Department of Labour for the fiscal year ended March 31, 1952, is now published and available for distribution. Copies are obtainable at 25 cents per copy from the Circulation Manager, Department of Labour, Ottawa.

CCCL Holds Month-long Labour College in Quebec

The first labour college in Canada was opened last November, at Quebec, by the Canadian and Catholic Confederation of Labour. Thirty-two members of the labour organization, from 13 industrial centres in the province and representing 12 different classes of industry, left office and factory for a whole month for the purpose of acquiring a more advanced social, economic and trade-union training.

This was the first time that one of the three major Canadian labour congresses had asked its members to leave work for a month in order to devote themselves to the study of economic and trade-union problems.

This latest venture on the part of the CCCL in the matter of labour education is the outcome of that trade-union training which has been under way for a number of years now in the form of study days and labour action schools. In the minds of the leaders of the CCCL, the success of this first session of their labour college augurs well for the establishment, in future, of a trade-union university for the working classes of the province of Quebec.

The 32 students taking the first course, among whom were a young lady and two priests, stayed at the Château Bonne-Entente, a tourist home in the suburbs of Quebec City which the CCCL's Education Service rented for the month.

There the students spent a month listening to lectures dealing with such subjects as the preparation of placards during strikes, the social doctrine of the Roman Catholic Church and the economic problems of the day.

The instigator and the first Head of the college was Fernand Jolicoeur of Quebec, Director of the CCCL's Education Service. A graduate in Social Science and Philosophy from Laval University, Mr. Jolicoeur was, for a number of years, organizer and business agent for the Joliette Central Council.

"It is time we were giving our attention to the training of a larger number of competent labour leaders, alive to the more and more numerous problems with which the trade-union movement has to deal," Mr. Jolicoeur stated. "The present development of the CCCL," he added, "no longer permits a slipshod treatment of these questions. The importance and the difficulty of our task make it necessary for us to know exactly where we are setting out from and where we intend to go."

The program of the courses was very full; even the evenings were taken up. Economic questions, the social doctrine of the Church, education, publicity, the art of speaking, and, of course, matters concerning trade-unionism were considered. Nearly half the time spent in class was devoted to questions relating to trade-unionism, including labour legislation and collective agreements. The practical side was not overlooked either; the students had to negotiate labour agreements and present evidence before courts of arbitration.

A team of 20 instructors—chosen from among the leaders of the CCCL, the professors in the Faculty of Social Science at Laval University and the directors of the Laval Extension Course Centre and of the Quebec Co-operation Council—was organized to give the courses.

Financially, the experiment was quite costly but the CCCL leaders consider this expense an excellent investment. Although the registration fees, covering room and board and the cost of the courses, amounted to only $200, they did not include travelling expenses (most of the pupils returned home during the week-end) or compensation for the month's wages. These expenses were met by the syndicates and the central councils or federations who sent members to this first course. In return, these members are expected to hold classes on week-ends in their respective districts.

One of the important factors contributing to the success of the labour college was the great variety of pupils attending the first session. The average age of the thirty-two union members was 33; the youngest, however, was only 22; the oldest, 44. Twenty-seven of the 30 lay pupils were married. The group also included two priests, who had just been appointed chaplains of syndicates and were eager to prepare themselves for their new duties, and a young lady who holds an important executive position in a large business syndicate in Montreal.

Ten pupils were persons who are "on leave from duty"; that is, they are in the permanent service of the CCCL as business agents or officers. The other 22 had to give up their regular factory or office work for one month to take the course.

A survey of the union functions of the students showed, in addition to the two chaplains, six presidents, two vice-presidents, four secretaries and seven directors of syndicates, six organizers and business agents of central councils or federations, two secretaries and one treasurer of federations, one central council secretary and one central council treasurer.

According to the Director of the CCCL's Education Service, this first attempt has proved that it is possible, and profitable, to transplant workers from the factory bench to the school desk for a month.

In view of this success, the organizers of the labour college intend to make it a yearly institution and, later, a permanent one.

"The CCCL needs competent, disinterested leaders to act as apostles," Mr. Jolicoeur emphasized. "The purpose of the CCCL's labour college is to prepare such leaders."

Walter Reuther Elected President of CIO

Walter P. Reuther, 45, President of the United Automobile Workers of America, has been elected President of the Congress of Industrial Organizations to fill the post left vacant by the death November 9 of Philip Murray.

At the CIO convention in Atlantic City December 1 to 3, Mr. Reuther was chosen over Alan S. Haywood, who was re-elected Executive Vice-President of the CIO.

The convention also adopted unanimously a resolution calling for the suspension of all wage controls. Declaring that a comprehensive stabilization program did not exist and that less than half of the cost of living in the United States was under effective regulation, the delegates concluded that there was no justification for further maintaining wage stabilization.

The resolution also urged Congress to drop most price controls but to keep curbs on rents and raw materials still affected by defence production. A stand-by control program that could be put into operation whenever inflationary pressures required was proposed.

Another resolution called for more co-operation between the CIO and the AFL with an eventual merger of the two labour organizations if this could be arranged.

Principal speakers at the convention were Governor Adlai Stevenson of Illinois, who urged organized labour to act with greater future responsibility to the country; Secretary of Labour Maurice Tobin, who said that labour unity was imperative and who called for a quick merger of the CIO and AFL in order to present the incoming Republican administration with a solid union front; and A. R. Mosher, President of the Canadian Congress of Labour, who said that his organization in Canada was thinking more and more of social security on a national scale in spite of those who object to the welfare state. The CCL, he said, was co-operating with the CCF party in an effort to obtain a comprehensive national health service.

Mr. Reuther was born on September 1, 1907 in Wheeling, West Virginia, the son of a German immigrant. At 16 years of age he left high school and apprenticed himself to a toolmaker. Three years later he went to Detroit and became a skilled toolmaker. He studied at Wayne University and held the position of foreman at the Ford Motor Company.

In 1933 he went to Germany and from there to the Gorki automobile plant in Russia. After a period of 16 months training youths in the toolmaking trade, he travelled to India, Japan and other Asiatic countries, returning to Detroit in 1935.

He formed and became President of Local 174 of the UAW while working at the Ternstedt plant of General Motors. In 1936 he organized and won a sit-down strike at the Kelsey-Hayes wheel factory, for which action he was made head of the UAW's General Motors Division.

During the Second World War Mr. Reuther encouraged airplane production and supported the no-strike policy formulated in 1942. In that year he became a Vice-President of the UAW. Due to his activity in the 113-day auto strike in 1945, which resulted in the first post-war wage increase, he was elected President of the 1,300,000-member union.

Mr. Reuther is a supporter of organic unity between the AFL and the CIO.

"Most Generous" Pension Won by Winnipeg ILGWU

A pension plan in which employers bear the full cost has been established for about 1,200 workers in 15 clothing factories in Winnipeg. The agreement was negotiated by the International Ladies' Garment Workers' Union (AFL-TLC), whose representative termed it the most generous retirement scheme of its kind on the continent.

Workers will become eligible for retirement after only ten years in the industry. Retirement age will be 60 years for women and 65 for men. Pensions will amount to $50 per month for women and $60 per month for men. Employers will contribute two per cent of their total payrolls towards the pension fund which a special committee of manufacturers and union representatives will administer.

The contract, which contains other social security benefits and a wage increase, is effective for five years beginning January 1, 1953.

Manpower Advisory Body Studies Defence Needs

The National Advisory Council on Manpower, at a two-day meeting in December, closely examined the manpower situation as it affects the defence program, particularly the availability of skilled and highly-skilled manpower for the Armed Forces and defence production.

It also urged the Government to declare a national policy for the employment of older workers and to study the extension of unemployment insurance coverage to some types of farm workers.

The Council heard statements from, among others, Arthur MacNamara, Deputy Minister of Labour and Council Co-chairman; Ian Campbell, National Co-ordinator of Rehabilitation of Civilian Disabled; C. M. Drury, Deputy Minister of National Defence; T. N. Beaupre, Assistant Deputy Minister of Defence Production; George Blackburn, Director, Information Branch, Department of Labour; and W. W. Dawson, Director, Special Services Branch, Department of Labour.

The Deputy Minister of Labour, who, with R. G. Robertson, Assistant Secretary to the Cabinet, chaired the meeting, told the Council that measures were now being taken to strengthen Canada's skilled labour supply and in the light of some of the facts revealed, further work would be undertaken where necessary.

Federal-provincial vocational training plans are already in existence to train skilled workers. It was planned to broaden these schemes, with a possible lengthening of the period of training so that highly technical skills might be developed which require longer training than can be provided through ordinary short-term training plans. Emphasis would be placed on in-plant training with the assistance of industry generally and particularly defence plants.

The shortage of highly skilled technicians for some of the more complicated defence production processes came in for lengthy examination. The Council learned that because of the great advances in weapon and machine design since the Second World War, more and more technical skills were being demanded by both defence industry and the Armed Forces. Maintenance of the new equipment by the Armed Forces called for many new advanced skills, which exerted pressure on the existing supply of tradesmen. The Armed Forces and industry were developing training courses to meet their needs, aided where possible by federal-provincial vocational training programs.

It was reported that last year at this time, there were about 100,000 workers employed in the plants of prime contractors on defence production and a somewhat similar number by subcontractors or suppliers. During the past year, combined defence employment in these two groups had increased by roughly 50,000 or approximately 25 per cent.

It was now expected, on the basis of the current program, that the overall manpower requirements would not reach their maximum level until late 1953. It was likely that, by that time, an additional 20-25 thousand workers would be involved, most of this increase taking place in the aircraft, weapons, ammunition and electronics programs.

As an indication of the problem of finding skilled workers with particular usefulness for present defence industries, it was pointed out that mechanical tolerances were ten times as exacting as they were in Second World War production. Also new techniques were required to match the stresses of supersonic speeds.

The recommendation that the Government declare a national policy for the employment of older workers followed the presentation of a memorandum, "The Prob'em of the Older Worker", by Mr. Blackburn.

Mr. MacNamara told the Council the Department of Labour will study the question of extending unemployment insurance coverage to some types of farm workers. R. A. Stewart of the Canadian Federation of Agriculture had suggested that farm employees doing specialized work, mechanics, for example, might be insurable.

Mr. Campbell said progress is being made towards a federal-provincial program to place disabled persons in employment. Maj.-Gen. E. L. M. Burns, Deputy Minister of Veterans Affairs, reported that 90 per cent of war casualties had been rehabilitated and felt that the same percentage of civilian disabled could be placed in jobs.

Mr. Dawson told the Council there were no urgent demands for farm labour at the moment but that immigration of farm labour would again be necessary in 1953.

Final 1951 Census figures of occupation groups of Canada's labour force population by sex, counties or census divisions, both rural and urban, have been published by the Dominion Bureau of Statistics as Bulletin 4-3, 1951 Census series. Copies are obtainable from DBS at 40 cents each.

"Ban Strikes" Say MP, Farmers' Spokesman

Two Canadians have recently called for the banning of strikes as a method of settling labour-management disputes.

One is John Sinnott, Liberal Member of Parliament for Springfield, Man. Speaking in the House of Commons on the federal conciliation board's recommended railway wage increase, he said he intends to introduce a private bill to ask the Government to ban strikes for a two-year period.

The other is Roy C. Marler, President of the Alberta Federation of Agriculture. At the recent convention of the Federation's 65,000 members he called for a nation-wide plebiscite to determine public opinion regarding the settlement of disputes "by some reasonable and just method."

Addressing the delegates, he said: "I believe public opinion has concluded, as have many in the labour ranks, that strike action does not provide on a long-range basis a desirable way of settling disputes between management and labour."

Agreement Lacking, B.C. Herring Operations Closed

British Columbia's herring fleet will not operate this winter.

The members of the United Fishermen and Allied Workers' Union (TLC) have turned down a "final" offer of $5.50 per ton made by the B.C. Fisheries Association. The operators have, in turn, rejected a union proposal involving a labour price formula rather than the price-per-ton basis. The new proposal worked out to $6.80 per ton.

Before 88 per cent of the union's membership voted to reject the offer, the Fisheries Association had announced that if the offer was not accepted there would be no operations this winter.

Union Permitted to Sue For Dues Firm Deducted

Permission to prosecute a company for refusing to turn over union dues deducted from the wages of employees has been given to the United Steelworkers of America (CIO-CCL) by the Ontario Labour Relations Board.

The Wabi Iron Works, New Liskeard, took the position that it was not obliged to turn the dues over to the union after the expiry of the contract and until a new agreement was signed.

In applying for leave to prosecute, the union held the company had violated the Ontario Labour Relations Act, which provides that all terms of a collective agreement shall continue until after a conciliation board has reported on a dispute.

B.C. Carpenters Decline To Seek 6-hour Day

A proposal to seek a six-hour day and 30-hour week in 1953 was rejected at the tenth annual convention of the British Columbia provincial council of the United Brotherhood of Carpenters and Joiners of America (AFL-TLC) in Vancouver recently.

The convention of 70 delegates, representing about 7,000 carpenters in 41 British Columbia locals of the union, endorsed the six-hour day "in principle" but recommended that the members ask a smaller reduction in work hours next year. Carpenters in the province now work a 40-hour week.

The convention also decided to seek more "fringe" benefits, including 4-per-cent holiday pay instead of the present 2-per-cent and pay for statutory holidays.

The three top officers were re-elected. They are: R. M. Strachan, President; J. F. Mobley, Vice-President; and E. T. Staley, Secretary.

Pension Plan Survives Firm's Reorganization

Pension plans incorporated in a union contract survive a reorganization of a company under the Bankruptcy Act, the United States District Court of Puerto Rico has held. The decision was handed down as a result of claims of railway employees against the dissolved American Railroad Company of Puerto Rico. The Court held that the successor company must assume all prior obligations of the original agreement.

The collective bargaining agreement reached between the railway employees and the dissolved company was "an executory contract never rejected by the Court". Thus, the Court ruled, the reorganized company must carry out the pensions provisions of the original collective bargaining contract to the full term. The Court dismissed the company claim that it should be responsible only for those employees who became eligible for pensions up to the time of the dissolution of the bankrupted company.

Sask. Equal Pay Act Comes into Effect

Provincial legislation granting women equal pay to men for comparable work in the same establishment came into effect on January 1, 1953, it was announced by the Saskatchewan government.

The equal pay act was approved at the 1952 session of the provincial Legislature (L.G., July, pp. 894 and 933).

British Civil Service Bid For Equal Pay Rejected

Equal pay for equal work for women in the Civil Service in Great Britain will not be fully introduced in the near future. However, the Chancellor of the Exchequer reaffirmed the Government's intention of making a start with the introduction of equal pay "when the situation permitted."

In receiving a deputation from the National Whitley Council of the Civil Service recently, the Chancellor undertook to give at an early date his considered view on the arrangements that might be made to introduce equal pay by gradual stages.

20 Locals Have Switched To AFL Textile Union

In the six months since George Baldanzi left the CIO Textile Workers' Union of America (L.G., June, 1952, p. 686) to join the AFL United Textile Workers of America, some 20 locals with almost 20,000 workers, mostly in the Southern and Middle Atlantic regions of the United States, have switched to the AFL, it has been reported. The secessionist movement in Canada, however, has apparently made few gains.

On September 17, the National Labour Relations Board in the United States ruled that the transfer of the Baldanzi group from the CIO to the AFL was a *bona fide* schism and that, as a result, an existing CIO contract in a large textile mill in North Carolina was not a bar to an election demanded by the AFL rival on a showing that employees involved had gone over to the AFL. This opened the way for other large gains by the UTWA in the Southern States.

Speaking at the CCL convention in Toronto last September, Emile Rieve, International President of the TWUA, said: "I am happy to report to you that the union-splitting movement has been a total failure. In Canada the issue has been decided in almost every local union—and the splitters have been decisively defeated time after time. In the United States, less than 2,500 members have left the organization; and while many contests are still pending, I doubt that the total will exceed 10,000 out of a membership of almost 400,000."

While defections in the United States have exceeded those predicted by Mr. Rieve, events in Canada are showing him to be correct with regard to this country.

In September Harold D'Aoust, Canadian director of the TWUA, reported that 18 out of 25 locals, comprising some 3,400 workers or better than 78 per cent of the membership in the Hamilton area, had voted to return to the CCL-CIO body.

In Ontario

In other Ontario towns, the AFL has lost nearly 1,000 members, 250 in Woodstock to the TWUA and the rest in Welland to the independent Canadian Textile Council. This appears to have practically ensured the failure of the AFL organization drive headed by Sam Baron and Jack Robinson, both former CIO officials who went to the AFL with the Baldanzi group last spring.

Immigrants in Montreal Get Vocational Training

Vocational training classes for immigrants opened at the Montreal Technical Institute this month. The first of their kind in Canada, the 40-hour lecture courses will be aimed at helping skilled workers and professionals to adapt themselves to Canadian life.

In making the announcement recently, Robert Hill, President of the Canadian Society for the Aid of Refugees, pointed out that many immigrants are former lawyers, diplomats and doctors who cannot meet Canadian professional standards. These people have leadership qualities and could make excellent foremen, supervisors and directors of work with a little vocational training.

The courses will cover language, health regulations and systems of measurement in both English and French and also make provision for young immigrants who want to learn a trade.

The new classes will increase to nearly 5,000 the number of new Canadians already studying in Montreal—mainly languages and citizenship. Officials expect this number to go up another 2,000 during the winter.

Immigrants in 10 Months Last Year Total 146,236

During October a total of 10,940 immigrants entered Canada, bringing the total for the first ten months of the year to 146,236. This compares with a total of 152,473 for the same period of 1951.

Skilled workers comprised the largest single group in the 4,974 workers who arrived, with a total of 1,244. Other major groups among the workers were 870 unskilled and semi-skilled, 764 female domestics, 748 professionals and 315 destined for Canadian farms.

The month's figures showed a continuation of the increase in immigration from Great Britain, with 3,856 English, Irish, Scottish and Welsh arriving in October of this year compared with 3,123 in the same month a year ago. Total arrivals from the United Kingdom in the ten months of this year now stand at 36,637, compared with 25,058 during the same ten months of 1951. Representing an increase of 46 per cent, the ten-month British arrivals are almost 5,300 in excess of the 12-month total of 1951.

Also exceeding the total 12-month figures of 1951 are the number of immigrants who have come to Canada from the United States and the number of Canadians who have returned to Canada from that country. In the ten months of this year, 7,904 United States immigrants have come to Canada and in the same period 4,104 Canadians have returned. During all of 1951 the total of United States immigration was 7,732 and of returning Canadians 3,635. October figures themselves showed 927 immigrants from the United States, an increase of 28 per cent over the 722 who arrived in the same month a year ago, and 311 returning Canadians, compared with 291 in October 1951.

While figures from the United Kingdom and the United States are up, the total immigration for the ten months is down four per cent or 6,177 from the total of the first ten months of 1951.

Technical English Taught Immigrants in Hamilton

A project designed to teach technical English to New Canadians who are qualified engineers and draftsmen is being conducted at the Canadian Westinghouse plant in Hamilton.

Under the direction of E. L. Lyons, the company's Supervisor of Instruction, 25 students representing 12 European countries are learning the English equivalents of technical terms and equipment they are already familiar with. All are seeking membership in the Association of Professional Engineers in Ontario, a qualification necessary before any one may practise as an engineer.

Besides studying technical terms, taught by means of blackboard diagrams and a Westinghouse booklet, the students are making rapid progress in conversational English.

675,423 Receive Pension At End of October

The number of persons receiving old age security payments in Canada stood at 675,423 at the end of October. This total is about 95 per cent of all persons in Canada 70 years of age or older.

More than 6,100 persons received the $40 payment for the first time in October. Of this number more than 1,000 could have been paid last January when the program began if they had sent in their applications in time. Payments are not retroactive.

The number of persons in Canada receiving assistance under the Old Age Assistance Act at September 30, 1952, was 81,016.

The federal Government's contributions under the Federal-Provincial scheme from January 1, 1952, when the Act came into operation, to September 30, 1952, totalled $11,701,580.01.

The number of blind persons in Canada receiving allowances under The Blind Persons Act was 8,313 at September 30, 1952.

The federal Government's contributions under the Federal-Provincial scheme from January 1, 1952, when the Act came into operation, to September 30, 1952, totalled $2,224,432.08.

Name New Members to Sask. Apprentice Board

The membership of the Provincial Apprenticeship Board of Saskatchewan has been changed. The new members are D. P. Logan of Yorkton and A. J. Rankin of Moose Jaw, representing employers; William Simpson of Regina and F. Turcotte of Saskatoon, representing workers; W. A. Ross of Regina and A. E. Peacock of Moose Jaw, representing the Department of Education; and J. S. Dornan of Regina, representing the Department of Labour. Mr. Dornan will be Chairman of the Board.

Four Provinces Require Apprentices to Register

In four of the seven provinces in which federal-provincial agreements are in effect, registration of apprentices in designated trades is compulsory. All seven provinces require apprentices to attend day or evening classes. This was learned through an inquiry, made by the Training Branch of the Department of Labour, concerning compulsory legislation in the various provinces and the efforts made to enforce registration and school attendance.

Reporting on the findings to the Apprenticeship Training Advisory Committee, at whose request the inquiry was made, A. W. Crawford, Director of Training, said it was found that compulsory registration is fairly well enforced in designated apprenticeship trades controlled by Tradesmen's Qualification Acts but that the registration of apprentices in other designated trades is difficult to enforce. With one or two exceptions, the small numbers of registered apprentices in the various trades in each province, he said, indicate that many learners who should be indentured and registered are not receiving the benefits of such legislation.

Reluctant to Prosecute

From the information received, school attendance does not appear to be better enforced in the provinces which have compulsory legislation than in those provinces where such attendance is a condition of the apprenticeship contract, but is not controlled by law. Apprenticeship officials are reluctant to prosecute employers or apprentices in cases of known violation of the law.

The emphasis in all provinces, Mr. Crawford gathered, is on voluntary co-operation rather than on compulsory legislation. Where an earnest effort is made to provide suitable effective trade instruction in day classes, there is a growing tendency on the part of employers and apprentices to take advantage of such instruction.

In some provinces, he continued, certificates are issued despite failure to comply with the regulations governing school attendance, particularly in cases where provision for such instruction is inadequate. A few provinces refuse to issue certificates if the apprentice does not regularly attend classes, unless his absence was for good reason approved by the provincial authorities and he is able to pass a trade test on completion of the training program.

Replies to the inquiry received from the various provinces are summarized as follows:—

New Brunswick—There is no legislation which requires an employer to indenture an employee in any trade. The Health Act requires that before writing examinations for a plumbing licence the candidate shall have been indentured as an apprentice. Plumbing employers are required under this Act to register all helpers.

The Apprenticeship Act or standards of the province call for at least 144 hours of related class instruction for each year of the apprenticeship period. An effort is made to enforce this requirement where instruction is available through full-time day training classes or part-time day and evening classes. Some contracts have been cancelled for failure to attend such classes. Where no such instruction is available, the apprentice is required to pass an examination in trade theory before receiving his certificate.

Ontario—Employers are required to register apprentices in all designated trades and regulations provide for compulsory school attendance. Enforcement has not been strict but recently the Advisory Committee decided to do everything possible to see that apprentices attend classes, and no diploma is to be issued to any apprentice at the conclusion of the training period if he has not fully attended day classes in accordance with the regulations.

Manitoba—Manitoba legislation provides for compulsory registration and school attendance. One employer was prosecuted and fined $10 and costs for failure to comply with the Act. Apprentices who fail to attend classes forfeit remuneration for the period of such non-attendance and the contract may be cancelled if the apprentice fails to attend without reasonable excuse. School attendance depends largely on the attitude of the employer.

Saskatchewan—Saskatchewan has no compulsory apprenticeship legislation. All apprentices are indentured on a voluntary basis. The apprenticeship contract requires attendance at school when so directed by the Apprenticeship Director. Recently a few contracts have been cancelled for refusal to attend classes. No apprentice has been held back for non-attendance at classes. The continuing improvement of training facilities is changing the attitude of employers and improving school attendance.

Alberta—The Act and regulations of Alberta require that every person over 16 years of age receiving instruction in a

designated trade must be registered as an apprentice. Seven trades require certification under the Tradesmen's Qualification Act. The building trades are not so regulated and any person receiving journeyman rate is deemed to be a qualified tradesman.

Attendance at day classes is compulsory and a real effort is being made to enforce such attendance. The Apprenticeship Board has ruled that apprentices who do not attend classes as notified shall be frozen in their apprenticeship, at the date of the closing of the class which they were notified to attend. Notice of class opening is mailed two weeks in advance.

British Columbia—The British Columbia Act requires that an employer shall place every minor employed by him in a designated trade under contract of apprenticeship, subject to penalty for non-compliance. As in other provinces, enforcement is effected through field inspectors. Apprenticeship regulations require attendance at evening classes and it is estimated that where such classes are available, approximately 95 per cent of the apprentices attend. Correspondence courses are made available to apprentices in isolated areas. Apprenticeship certificate is withheld from apprentices who refuse to attend available classes.

The National Conference on Apprenticeship in Trades and Industries, at its meeting in May 1952, recommended "that action be taken by the provinces to ensure that apprentices report for class instruction as and when notified to do so by the Director of Apprenticeship, unless the apprentice can satisfy the appropriate provincial body that he has mastered the standard skills and knowledge, at the level at which instruction is being given" (L.G., July 1952, p. 877). The recommendation was referred to the Apprenticeship Training Advisory Committee for action.

Quebec Superior Labour Council Elects Officers

Paul Lebel of Quebec has been re-elected President of the Quebec Superior Council of Labour.

Mortimer Baker of Dominion Engineering Company, Lachine, Que., and Roger Provost, President of the Quebec Provincial Federation of Labour (TLC), were elected Vice-Presidents. J. P. Deslierres was re-elected Secretary.

Mr. Baker was also elected President of the Council's permanent committee set up to study the province's labour law with a view of drawing up a labour code. Gérard Picard, President of the Canadian and Catholic Confederation of Labour, and Léonce Girard, President of the Party Committee of the Shoe Industry, were elected Vice-Presidents.

Members of the permanent committee are:—

For Labour: Philippe Vaillancourt, Regional Director of the Canadian Congress of Labour, and Jean Marchand, Secretary-General of the CCCL.

For employers: J. A. Juneau, of Quebec, representing the Retail Merchants Association; H. M. Sparks, Manager of the Industrial Relations Department of Northern Electric Company; and Jack Latter, of Anglo-Canadian Pulp and Paper Company.

Representing economists and sociologists are Henri Ferron, of Three Rivers, an accountant, and Prof. H. D. Woods, Director of the Industrial Relations Council at McGill University.

Technical Aid Answer to "Discontent"—Keenleyside

Technical and economic aid is the solution to the problem of the "determined discontent" that is sweeping over two-thirds of the people of the world, according to Hugh Keenleyside, Director General of the United Nations Technical Assistance Administration. He made the statement in an article in the December 6 issue of *Saturday Night*.

Technical Assistance, states Mr. Keenleyside, is a program of mutual aid designed to enable the "fermenting and revolutionary areas of the world" to revitalize the basic elements of their national economies and become self-supporting.

Today, according to the article, more than half the people in the world are illiterate. Half the people in the world are ill and expect to die before reaching the age of 35 years. Half the people in the world have an income of less than $100 a year. Most of the people in the world are hungry most of the time.

Among the many needs of these people Mr. Keenleyside mentions simple, practical help in producing more food, the clearing of malarial swamps, the division of land, help in finding markets, increased production in all its aspects, and the elements of political decency in practice.

The Colombo Plan of the Commonwealth countries, the Point Four or Mutual Agency program of the United States, and the many programs of the United Nations and the Specialized Agencies are already attempting these forms of assistance.

Predicts Production Will Double in Next 25 Years

Canada's national production may more than double in the next 25 years, according to Dr. O. J. Firestone, Economic Adviser to the Department of Trade and Commerce, in a recent address delivered to the Engineering Institute of Canada. Dr. Firestone estimated that the Canadian population would rise to more than 23,000,000 in the same period.

The increased production of aluminium, zinc, nickel, copper and asbestos was cited by Dr. Firestone, who also pointed out that a strong economy was based on expanding consumer purchasing power, bigger exports and increased investments in the economy.

Most Industries Enlarge Work Force in Decade

More persons 14 years of age and over were employed in 1951 than a decade earlier in each of the 11 main classes of Canadian industry except agriculture and fishing and trapping, the Bureau of Statistics has reported in a 1951 Census bulletin detailing the labour force population by industry and sex for Canada and the provinces.

The number of persons employed in agriculture dropped by 255,044, or nearly 24 per cent from 1,082,074 in 1941, to 827,030, while the number of those engaged in fishing and trapping was down slightly from 50,898 to 50,579.

Largest numerical increase in the 10-year period was in the number of persons employed in manufacturing, which increased by 391,147 or over 40 per cent from 969,515 to 1,360,662. Second largest gain was in the services group, which rose by 283,891 or nearly 36 per cent from 793,574 to 1,077,465, while the third largest was in the number of persons in trade, which rose by 241,806 or 52 per cent from 464,962 to 706,768.

The total labour force increased by 1,090,202 or almost 26 per cent during the decade from 4,195,951 (excluding the Armed Services) in the nine provinces in 1941 to 5,286,153 in the 10 provinces in 1951. At the same time the total population rose by about 22 per cent.

Largest percentage increase between 1941 and 1951 was in the number of persons employed in the electricity, gas and water industry class, which rose by 36,208 or over 141 per cent from 25,606 to 61,814. The number engaged in finance, insurance and real estate increased by 54,315 or nearly 61 per cent from 89,680 to 143,995, while the number employed in construction rose by 130,675 or more than 59 per cent from 220,221 to 350,896.

During the decade the number employed in transportation, storage and communication increased by 136,117 or 51 per cent from 266,590 to 402,707, the number engaged in forestry and logging by 36,036 or more than 38 per cent from 93,796 to 129,832, and the number employed in mining, quarrying and oil wells by 10,808 or close to 12 per cent from 93,040 to 103,848.

Between 1941 and 1951 the proportion of the total labour force employed in agriculture dropped from close to 26 per cent to less than 16 per cent, while the proportion employed in manufacturing increased from 23 per cent to almost 26 per cent. The proportion in the service class rose from almost 19 per cent to more than 20 per cent; in trade, from 11 per cent to more than 13 per cent; in transportation, storage and communication, from more than six per cent to close to eight per cent; in construction, from more than five per cent to almost seven per cent; in finance, insurance and real estate, from two per cent to nearly three per cent; and in forestry and logging, from 2·2 per cent to 2·45 per cent. In 1951, employment in mining, quarrying and oil wells accounted for about two per cent of the total labour force; the electricity, gas and water class for a little more than one per cent; and fishing and trapping for about one per cent.

Montreal Fire Fighters Set up Health Scheme

The Montreal local of the International Association of Fire Fighters (AFL-TLC) has established a health co-operative to protect its members in case of illness or hospitalization. It is the second incursion of the Montreal fire fighters in the field of co-operatives. In 1945, they founded a savings bank whose assets now total more than one million dollars.

The new health co-operative, founded in July under the Co-operative Syndicates Act of the Province of Quebec, has been in operation since November 1.

To become a member, a fireman must purchase a $1 share and pay a monthly contribution of $1.50 for single men and $4.90 for family groups. In the case of a family, all children under 18 years of age are covered.

Some 1,000 fire fighters have already joined.

Workmen's Compensation For Civil Defence Staffs

Cost of extending full benefits of the provincial Workmen's Compensation Act to Ontario's civil defence workers is to be shared equally by the federal and provincial Governments, it was disclosed in Ottawa in a joint statement by Hon. Paul Martin, federal Minister in charge of civil defence, and Hon. G. Arthur Welsh, Ontario's Provincial Secretary.

Mr. Martin noted that this agreement is the first such joint undertaking arising from Ottawa's offer to share costs of compensation which the provinces might agree to pay to anyone killed or injured while serving in official civil defence organizations.

Mr. Martin said that the Ontario agreement covers persons training for, as well as actually engaged in, civil defence work. This is defined as "all measures, other than military, carried out under the direction of the provincial director of civil defence or any local civil defence authority, designed or intended to protect and preserve life, property and public services against any form of enemy attack and to minimize damage therefrom, and includes training."

It is specified that any person duly enrolled and registered with the provincial director of civil defence qualifies for compensation while actually engaged in civil defence work.

Seek Greater Uniformity In Apprentice Training

With a view to bringing about more uniformity in apprenticeship standards, the Apprenticeship Training Advisory Committee, at its November meeting, recommended that surveys of the machinist, carpentry, aircraft fitter mechanics, and motor mechanics trades be undertaken by the Vocational Training Branch of the federal Department of Labour.

Greater uniformity in apprentice training, the Committee agreed, would do much to facilitate the exchange of trainees and mechanics within industry.

Anti-Discrimination Law In N.Y. is Reviewed

A review of the Ives-Quinn Law of the state of New York, which bars racial and religious discrimination in employment, is contained in the October issue of the *Industrial Bulletin* published by the state's Department of Labour.

The author, Hon. Irving M. Ives, United States Senator, was one of the framers of the bill which became law in 1945.

The Ives-Quinn Law, according to Mr. Ives, was the first in human history to make the flat declaration that: "The opportunity to obtain employment without discrimination because of race, creed, colour or national origin is hereby recognized as and declared to be a civil right."

On the U.S. Labour Scene

David J. McDonald Named New Steelworkers' Chief

David J. McDonald, International Secretary-Treasurer of the United Steelworkers of America (CIO) since its founding, has been nominated without opposition to succeed the late Philip Murray as President of the 1,100,000-member union.

The nomination assures Mr. McDonald of election for a four-year term in the union's referendum February 10.

Mr. McDonald was born on November 22, 1902, in Pittsburgh. He began working at an early age and rose to the position of secretary to Philip Murray when the latter was a Vice-President of the United Mine Workers of America. He remained with Mr. Murray when the steel union was formed in 1936.

Official Recommends End To U.S. Price Controls

Complete suspension within 90 days of price controls on all consumer goods, including foods and excepting only petroleum, was suggested recently in a confidential memorandum to Economic Stabilizer Roger L. Putnam, according to Oscar E. Naumann writing in the New York *Journal of Commerce*. All wage controls should be dropped during this period, the document further suggests.

The memorandum, written by Edward F. Phelps, Jr., Assistant Director of Price Stabilization, proposes a new principle of controls for certain basic materials and industrial goods which are directly related to the defence effort and to business costs. These include most primary steel, some

non-ferrous metals, certain types of machinery, sulphur and fertilizers, synthetic rubber, some hardwoods, crude oil and natural gas, surgical instruments and office, kitchen and hospital equipment.

"Controls Not Justified"

The memorandum suggests that "in the case of consumer goods and services, including food, it is substantially evident that price controls are not presently producing anti-inflationary results sufficient to justify their continuing use."

With regard to wage controls, the memo states that "a strong mediation service will be more apropos than a wage stabilization function."

AFL Ready to Settle for Taft-Hartley Amendment

The AFL is now ready to settle for amendment rather than repeal of the Taft-Hartley Act, George Meany, the Federation's president, said in a radio talk recently.

Conceding that the Republican victory in the United States elections had more or less halted the drive by organized labour for repeal, Mr. Meany said the AFL objective now was to obtain amendments that would make the Taft-Hartley law acceptable to labour.

U.S. Unemployment Drops To New Post-War Low

Unemployment in the United States dropped to a new post-war low in October.

For the week ending October 11, it was estimated that 1·3 million persons were out-of-work, compared with 1·4 million the previous month and 1·6 million for October 1951. This October's unemployed constituted about two per cent of the total labour force, one of the lowest percentages on record except during the Second World War.

One in Every 12 Persons In U.S. Aged Over 65

About one in every 12 persons in the continental United States was 65 years of age or over on July 1, 1951, according to the Bureau of the Census. Fifty years ago, only one in every 25 was 65 years or over.

In April 1950, when the 17th Census was taken, there were 12,269,538 persons in the 65-years-and-over category. In April 1940, when the 16th Census was taken, there were 9,019,314 persons 65 years of age and over.

While the total population increased by about 16·5 per cent in the 11-year period between April 1940, and July 1951, the 65-and-over group increased by about 41·5 per cent, about two-and-a-half times as fast.

Employment Improves In Major U.S. Markets

Most metropolitan labour markets in the United States are currently being reclassified upwards from areas with moderate labour surpluses to areas with a balanced labour supply. General improvement in employment and in economic conditions is given credit for the upgrading.

According to Maurice Tobin, Secretary of Labour, a favourable economic climate prevails in most big cities. Taking the city of Detroit as an example, Mr. Tobin said:—

"A year ago unemployment in Detroit was mounting rapidly as a result of cutbacks in materials for the auto industry. At that time it became a labour surplus area; but now, with unemployment nearing post-war lows, there appears to be an impending labour shortage in Detroit rather than a possibility of any labour surplus."

Builders' Wage Scales Up 1.3 Per Cent in Quarter

Wage scales of union workers in the building construction industry advanced 1·3 per cent between July 1, 1952, and October 1, 1952, compared with a rise of ·7 per cent in the corresponding period of 1951.

These figures resulted from a survey by the Bureau of Labour Statistics, United States Department of Labour, of seven major building trades in 85 cities. About one-fifth of the 585,000 building trades workers in the country were covered in the survey.

The Bureau's estimate of the average hourly wage scale of unionized building trades workers on October 1, 1952, was $2.60, a rate 31 cents an hour above the level of July 3, 1950, and 39 cents above that of January 3, 1950.

The following were the range of rates for the main crafts in the building trades at October 1, 1952: bricklayers, $2.50 to $3.65; carpenters, $2.16 to $3.45; painters,

$1.65 to $2.83; plasterers, $2.25 to $3.65; plumbers, $2.19 to $3.25; and building labourers, 90 cents to $2.56.

The spread between the minimums and the maximums for each craft largely results from the wage differentials existing between the north and the south.

Step Up Enforcement of Non-Communist Provision

Two recent developments indicate an increased interest by the National Labour Relations Board in the enforcement of the provision in the Taft-Hartley Act requiring union officials to sign non-Communist affidavits. Since passage of the Act five years ago, the Government had previously made little effort to prosecute for violations of this provision.

The NLRB has withdrawn its recognition for one local union and threatened the same penalty for four others and has said it will study a statement by the federal Grand Jury in New York requesting the removal of collective bargaining rights from four international unions.

Both developments follow closely the first conviction registered against a union officer for filing a false non-Communist affidavit. A United States District Court recently convicted Anthony Valentino, business agent for several unions in Newark, N.J., on this charge.

Three of the unions served by Mr. Valentino were locals of the Food and Tobacco Workers Union, one of the 11 unions expelled several years ago by the CIO for following the Communist Party line. Another was a local of the United Packinghouse Workers of America (CIO).

The New York Grand Jury requested removal of collective bargaining rights from the United Electrical, Radio and Machine Workers of America; the American Communications Association, the Fur and Leather Workers Union; and the Distributive, Processing and Office Workers Union. The first three are former CIO affiliates; the fourth, a new composite union of several expelled CIO affiliates.

Under the Taft-Hartley Act, an officer of a labour union must file with the NLRB his sworn statement that he is not a member of the Communist Party and that he does not support any organization that believes in the overthrow of the Government by unconstitutional methods.

Extracts from Hansard of Interest to Labour

Voluntary Revocable Check-off

November 24

Mr. Stanley Knowles (Winnipeg North Centre) moved for leave to introduce Bill No. 2, to amend the Industrial Relations and Disputes Investigation Act (voluntary revocable check-off).

Motion agreed to and bill read the first time.

Fair Employment Practices

November 24

Mrs. Ellen L. Fairclough (Hamilton West) moved for leave to introduce Bill No. 4, to promote fair employment practices in Canada.

Motion agreed to and bill read the first time.

Old Age Pensions

November 24

Mr. Stanley Knowles (Winnipeg North Centre): Can the Prime Minister say when the former Old Age Pensions Act will be repealed so that provinces like Manitoba, which are pressing needy pensioners to make repayment and which are still making recoveries out of the estates of deceased pensioners, can discontinue this practice?

Right Hon. L. S. St. Laurent (Prime Minister): The matter of repealing the Old Age Pensions Act is one about which there is correspondence between this Government and the provincial governments. As that correspondence is being conducted on our behalf by the Department of National Health and Welfare, perhaps the parliamentary assistant would be able to tell the hon. gentleman just what stage it has reached at this time.

Mr. E. A. McCusker (Parliamentary Assistant to the Minister of National Health and Welfare): It is the intention of the Government to proclaim the repeal of the Old Age Pensions Act as soon as there is agreement from the provinces which co-sponsored this Act that this should be done. Not all of the provinces have yet agreed on the desirability of repeal at this time, but it is hoped that agreement will be reached shortly so that the necessary proclamation can be made.

Civil Service 5-Day Week

December 1

Mr. Stanley Knowles (Winnipeg North Centre): Will Winnipeg be included with Montreal, Toronto and Vancouver as a city where the year round five-day week will be established for certain branches of the Civil Service according to the letter from the Minister of Finance which was tabled in this house on Friday?

Hon. Stuart S. Garson (Acting Minister of Finance): At the present time the Treasury Board does not contemplate the extension of the five-day week to government employees in Winnipeg. The advice received by the officers of the Board's staff from the Civil Service Commission is to the effect that the five-day week is not sufficiently predominant among private employers and employees in Winnipeg that it is necessary to extend it to the government staffs in that city.

Printing of Canada Savings Bonds

December 3

Mr. Howard Meeker (Waterloo South): Is the Acting Minister of Finance aware of the fact that job printing work in connection with the recent Canada savings bond issue was done in the United States? Why was this, and can the minister assure this house that Canadian printers will be given an opportunity to do this work in the future?

December 4

Hon. Stuart S. Garson (Acting Minister of Finance). The answer is as follows: It is not true, as the hon. member's question states, that job printing work in connection with the recent Canada savings bond issue was done in the United States. As part of their sales promotion program the payroll savings organization in Ontario purchased bulletin blanks from a firm in Stamford, Connecticut. These bulletin blanks were not printed to order and do not constitute job printing. Six thousand four hundred and fifty of these blanks were purchased at a cost of $206.99. To have charged the art work and lithographing plates against an order of this size in Canada would have cost many times more than this figure.

Approximately $102,000 has been spent for printing forms and publicity material for the seventh series of Canada savings bonds, all of which, with the exception of the bulletin blanks, has been spent in Canada, so that the cost of these blanks represents about 1/500th part of the total amount expended.

National Advisory Council on Manpower

December 11

Mr. Howard C. Green (Vancouver-Quadra): I should like to ask the parliamentary assistant to the Minister of Labour if there have been any resignations from the National Advisory Council on Manpower. If so, what members have resigned, and will a statement be made in regard thereto?

Mr. Paul E. Coté (Parliamentary Assistant to the Minister of Labour): Mr. Speaker, I wish to thank my hon. friend for having given me notice of his question. Two resignations have been received by the Council, one from one of the two lady members representing the women of Canada, Mrs. de la Durantaye. She has been replaced by Mrs. Flore Jutras, Montreal. The other resignation was received from Mr. Rhys M. Sale, President of the Ford Motor Company, one of the representatives of employers. I am not aware that he has been replaced yet.

Employment Age Limit

December 11

Mr. J. W. Noseworthy (York South): I should like to direct a question to the Minister of Defence Production. It arises out of an advertisement in the Toronto *Telegram* by Canadian Arsenals Limited, a copy of which I have sent to the Minister. Will the Minister, in the light of the Department of Labour's request to private enterprise to hire people over 45, explain why Canadian Arsenals Limited, a crown company, is setting an age limit of 35 years for new employees?

Right Hon. C. D. Howe (Minister of Defence Production): I must say that when I read the advertisement I was as shocked as was my hon. friend. I have made inquiries. No good reason has been advanced for specifying an age limit except that the aptitude of people under 35 for this particular kind of work seems to be better than that of people over that age. I have given instructions that employment shall be given on the basis of adaptability without discrimination as to age.

Merchant Seamen Compensation Act

December 15

Hon. Alphonse Fournier (for the Minister of Labour) moved the first reading of Bill No. 46 (from the Senate), to amend the Merchant Seamen Compensation Act.

Motion agreed to and bill read the first time.

Organization of White-Collar Workers in Canadian Manufacturing Industries

Almost 10 per cent of white-collar workers in Canadian manufacturing industries surveyed by Department of Labour in October, 1951, were in collective bargaining units and covered by collective agreements

The history of labour unions in the Canadian manufacturing industries has been almost entirely linked with craftsmen and plant workers. Only in the past decade have significant numbers of office workers become organized; unions having jurisdiction solely over office workers have been formed and a number of the unions which previously drew their membership from among non-office employees are now taking white-collar workers into membership.

Union organization among office workers has now reached proportions of some significance, as evidenced by the increasing number of such workers covered by collective agreements. Close to 10 per cent of the white-collar workers in the Canadian manufacturing industries surveyed by the Department of Labour in October 1951, are included in collective bargaining units and covered by agreements. While this percentage is small in comparison with the almost 50 per cent of plant workers in manufacturing found to be under collective agreements in the same survey, it represents a substantial advance in the last decade.

The slowness of office workers to organize, in comparison with plant workers, can be attributed to a number of factors, most of which are not peculiar to manufacturing but apply to industry generally.

Fifty years ago, office workers generally commanded substantially better working conditions than production employees. Clerical staffs were small and, as a rule, closely associated with management, a situation which not only contributed to better working conditions for the white-collar group but made them feel more closely identified with management than with labour.

Developments of the past half century, however, have changed the conditions of office work. As industrial units have expanded, office staffs have grown larger and many clerical jobs have become routine and mechanical in nature. At the same time, non-office workers have made rapid gains in employment conditions, and many of the advantages formerly associated with office employees now apply equally to plant workers. During the past 10 or 15 years, clerical employees have undoubtedly become more receptive than previously to unionization.

This study of office worker unions, prepared by the Economics and Research Branch, Department of Labour, applies to the manufacturing industries of Canada. A study of organization of white-collar workers in other industries will be issued and an analysis of their collective agreements made at a later date, it is hoped.

One obstacle to the unionization of white-collar workers is the high proportion of women doing office work. Since many women regard their employment as temporary, they often show little response to the long-range goals of unions. A survey of manufacturing establishments conducted by the Dominion Bureau of Statistics in the last week of October 1951, shows that, whereas only 21 per cent of the hourly-rated wage earners were women, the proportion of female office workers was 42 per cent (excluding managerial and professional employees).

The unionization of office workers is still at an early stage. It appears, however, that the success so far attained will bring about increased organizing activity among office workers in the future.

Type of Union Representing Office Workers

In the annual survey of wages and working conditions by the Economics and Research Branch, it was found that, as of October 1, 1951, 174 of the 6,500 manufacturing establishments surveyed reported the existence of collective agreements covering office staffs. These agreements applied to nearly 14,000 of the 156,000 office workers included in the survey.

Most of the office workers under agreement were organized in bargaining units separate from the plant workers' unit.

However, these units were frequently part of the same union that represented the plant employees. For example, the United Automobile Workers represents both plant and office workers of the Ford Company of Canada at Windsor. But these two groups are organized in separate locals and the union has signed a separate collective agreement for each.

As shown in Table 1, production worker unions in manufacturing have negotiated 36 agreements, applying to more than 6,000 office workers.

Unions made up wholly of office and clerical workers, on the other hand, have signed 39 agreements, but these apply to less than half as many workers.

Of the office worker unions, the International Union of Office Employees (AFL-TLC) has signed the most agreements (33). The Office and Professional Workers Organizing Committee (CCL) had not at the time of the survey any contracts in the manufacturing industries. Its membership is chiefly among clerical employees of union offices. The remaining six agreements in manufacturing negotiated by office worker unions were signed by the American Newspaper Guild (CIO-CCL). These six agreements cover relatively large groups of workers.

Some production worker unions have lumped together into a single bargaining unit both production and office employees. Where such "mixed" bargaining units exist, grouping office and non-office personnel, plant workers far outnumber office workers. The latter comprise small office staffs or employees working at such jobs as time keepers or equipment clerks in the plants. The 1,100 office workers belonging to "mixed" bargaining units are scattered through 76 establishments, or 44 per cent of the total number of establishments in

Total—All Unions	174	13,880

which white-collar workers are organized; but they constitute only eight per cent of the total number of office workers covered by collective agreements.

In addition to the unions active in the white-collar field, there are a number of independent employee associations. Here, again, the two categories of employees, office and non-office, may or may not bargain together. For the most part, these employee associations are found in electrical apparatus and supplies manufacturing establishments in the province of Quebec.

Of the total of 14,000 office workers covered by agreement, approximately 45 per cent are in office units established by production worker unions, 25 per cent are in units organized by employee associations, 20 per cent are under agreements made with office worker unions, and less than 10 per cent are under mixed bargaining agreements covering both office workers and plant workers.

Two unions, the United Auto Workers (CIO-CCL) and the International Association of Machinists (AFL-TLC), account for more than half of the number of office workers covered by production worker unions. One local of the UAW represents about 1,000 office workers while one local of the IAM bargains for approximately 2,000 office workers.

Geographical Distribution

All provinces, except Prince Edward Island, have unionized office workers. However, almost 90 per cent of the total number of office workers covered by collective agreements are concentrated in Ontario and Quebec. The former province accounts for about 60 per cent of organized office workers; Quebec, 30 per cent; British Columbia, 6 per cent; Newfoundland, 3 per cent; the remaining provinces make up the other one per cent.

So far, the organization work of production worker unions among office employees has been almost exclusively in Ontario, this province accounting for about 95 per cent of the workers covered by this type of union. In contrast, approximately 80 per cent of the office workers represented by employee associations are located in Quebec, while 15 per cent are in Ontario. Almost half of the office worker unions' coverage is in Ontario, the rest being as follows: British Columbia (23 per cent), Quebec (14 per cent), Newfoundland (14 per cent), New Brunswick (3 per cent), and Manitoba (1 per cent).

Industrial Distribution

Of the total number of office workers covered by agreements in the manufacturing industries, 26 per cent work in the transportation equipment industry and 25 per cent in the electrical apparatus and supplies industry (see Table 3). The printing, publishing and allied industries have 13 per cent of the organized white-collar workers; paper products, 12 per cent; iron and steel products, 11 per cent; and chemical products, four per cent. The remaining nine per cent are distributed among the following manufacturing industries: foods and beverages, rubber, leather, textiles, clothing, wood, non-ferrous metal, non-metallic mineral products, and petroleum and coal products.

Approximately 85 per cent of the total number of organized office workers in the trasportation equipment industry are in two large bargaining units, both in Ontario. Office workers at these two establishments are represented by the United Automobile Workers (CIO-CCL) and the International Association of Machinists (AFL-TLC) respectively. One is an automobile manufacturing plant, the other an aircraft plant.

In the electrical apparatus and supplies industry, about 80 per cent of the office workers covered by collective agreements are represented by large employee associations of Quebec firms. Nearly all of the remaining 20 per cent are included under agreements signed by the International Union of Electrical Workers (CIO-CCL) and are located at two Ontario plants. The office workers of three newspaper publishing companies, one in Ontario and two in British Columbia, making up almost 60 per cent of the total in the printing, publishing and allied industries, are represented by the American Newspaper Guild (CIO-CCL).

Most of the organized office personnel in the iron and steel industry are in three Ontario plants manufacturing agricultural implements; they are represented by the United Steel Workers (CIO-CCL).

The membership of the Office Employees' International Union (AFL-TLC) is concentrated largely in the pulp and paper industry, a good proportion of whose office personnel is now organized. While only 12 per cent of all office personnel covered by union agreements are employed in the pulp and paper industry, there are more office worker bargaining units in this industry than in any other in the manufacturing group.

Salaries of Clerical Employees in Canadian Manufacturing Industry

Office workers' salary gains from October, 1949, to October, 1951, were not quite as substantial as production workers' wage increases

The typical clerical worker employed in Canadian manufacturing enjoyed salary gains between October 1949, and October 1951, but his increases were not quite as substantial as those given to production workers.

Based on the reports of more than 7,000 establishments employing more than 60,000 in clerical occupations (*see* table), the average increase in office workers' salaries, in comparative terms, was 4·2 per cent between 1949 and 1950 and 13·0 per cent during the next 12 months. During the same periods, wage rates of production and maintenance staffs rose 5·9 and 13·4 per cent.*

A preliminary examination of wage increases for office personnel in the year ending October 1952, based on the reports of 50 of the largest firms in manufacturing,

*In some establishments, gains in office salaries may have equalled or even exceeded the gain in production wages but, despite the similarity in trend, the over-all average increases have apparenlty not been quite as substantial.

Typist, Female	29.34	30.43	34.91

NOTE:—Any monthly salaries reported were changed to weekly, using 4⅓ weeks per month as a conversion factor.

indicates that gains in average salaries for representative occupations varied, for the most part, from 4 to 12 per cent.

The table shows that, in 1951, of nine male occupational classes, all but junior clerks and junior bookkeepers averaged more than $50 a week. Senior clerks were the most highly paid group, averaging more than $66 a week, followed by cost clerks and accounting clerks, in that order, who received, on the average, about $9 and $11 less.

Of 18 female job categories, only secretaries received an average salary exceeding $50 a week in 1951. Senior clerks, bookkeepers, cost clerks and calculating machine operators averaged more than $40. Junior clerks were at the opposite end of the salary scale, averaging $31.56. Billing machine operators, typists and stock record clerks ranked slightly higher, receiving around $35 on the average.

It is not known to what extent the differences in salaries for male and female workers in the same occupational classification result from differences in duties performed.

Working Conditions of Office Workers Improve Although White-collar Unions Few—U.S. Survey

As far as working conditions and fringe benefits are concerned, office workers in the manufacturing industry in the United States are doing as well as, or better than, the plant workers although fewer of them belong to unions, according to a Bureau of National Affairs survey conducted recently in Cleveland, Ohio. In most cases, office staffs share in benefits won by factory personnel through collective bargaining.

These factors are a possible reason why the number of white-collar unions is comparatively small: only 4·8 per cent of the companies surveyed had such unions.

Furthermore, the 1952 annual survey of clerical rates recently published by the Commerce and Industry Association of New York, Inc., reveals that the floor on salaries paid to white-collar workers in that city is moving up. Clerical salaries as a whole have risen over the levels of October 1951, in 458 companies in New York City employing 71,604 office workers. And although the trend is general among clerks, typists, office boys, messengers, stenographers and secretaries, the highest rate of increase has been at the lower salary levels.

The Cleveland survey covers 287 managements employing 45,289 office workers in that city. Of these, 50 manufacturers, or 17·1 per cent, reported they required less than an 8-hour day of their office staffs. A large number reported a work day of between seven and 7½ hours.

A total of 250 companies, or 87·1 per cent, reported their offices were either closed on Saturday or that only some employees worked that day. Only 25, or 8·7 per cent, required their office staffs to work the full day.

While most factory employees are docked for lateness, only 29 managements, or about 10 per cent, reported that their office employees lost pay when late.

Of the companies interviewed, 68·2 per cent declared they had no age limit for new office workers.

Group insurance protection for their office staffs was reported by 213 or 74·2 per cent of the companies surveyed. Of these, 132 share expenses with the workers, 73 pay the entire cost and 58 companies give uniform insurance protection to all workers regardless of income or position. Accident insurance is provided by 53 companies who pay the full cost and 79 others who provide it on a contributory basis. Total cost of hospitalization is paid by 52 companies and shared with employees by another 53. The hospitalization plans of 43 companies cover a worker's dependents automatically. Fifty-six companies provide surgical insurance, 48 of them on a contributory basis. These insurance plans are in effect mostly in the larger firms.

Like the plant worker, the office employee gets six paid holidays a year, but eligibility requirements are lower. In 153 companies, or 53·3 per cent of those surveyed, holiday money is paid office workers as soon as they are on the payroll. In 164 companies, leave of absence for indefinite periods is granted.

Most firms where factory workers get three weeks vacation after a certain number of years reported the same holiday plan for office workers. Nineteen companies said they have no further eligibility requirements for two weeks after one year of service.

(Continued on page 98)

Normal Work Week Analysed by Size of Establishment in Canadian Manufacturing

Proportion of workers on five-day week tends to increase with size of establishment, analysis shows. Only half of reporting establishments with fewer than 25 employees are on five-day week but three-quarters of those having more than 1,000 workers are following that schedule.

An analysis made recently by the Economics and Research Branch, Department of Labour, of the normal work week in the manufacturing industries by size of establishment shows a tendency for larger establishments to have shorter working hours. The analysis is based on returns submitted by 6,600 plants engaged in manufacturing activity, as part of the Branch's annual survey of wages and working conditions in Canadian industry. The date of the survey was October 1951.*

The analysis also indicates that in the manufacturing industries the proportion of workers on the five-day week tends to increase with the size of the establishment.

The establishments making returns in the annual survey consist largely of those employing 15 or more persons. For purposes of the present study, the 6,600 plants were distributed among seven size groups. The proportion of establishments and of plant workers in each of these size groups is as follows:—

Size of Establishment (Number of Plant Employees)	Per Cent of Total Establishments	Per Cent of Total Plant Employees
Fewer than 25	32·2	3·6
25– 49	22·3	6·6
50– 99	20·1	12·0
100–199	12·7	14·9
200–499	8·4	21·5
500–999	2·9	16·9
1,000 and more	1·4	24·5
	100·0	100·0

The table on page 41 gives details on the length of the work week in establishments in each of these size groups. Examination of this table reveals considerable variations as between the different size categories. Of particular interest are the figures for the five-day week and the 40-hour week.

In studying the data in the table, it should be borne in mind that the unit being dealt with is "establishment" as distinguished from "firm". Some firms comprise a number of establishments and the work-week policy in these may be determined at the company level rather than by the units themselves. About one-fourth of the establishments upon which this study is based are branch plants of firms submitting at least two separate returns to the survey. The proportions shown, therefore, may be influenced by this factor; in effect, it might tend to magnify the proportions of the smaller sized establishments operating on a five-day, or a 40-hour, week.

*Further information on the normal work week derived from this survey has been published in the LABOUR GAZETTE for June (p. 708), September (p. 1191), and October (p. 1307).

Percentage of those on 5-Day Week to total	59·7	69·9	49·6	53·5	58·1	58·5	64·6	64·6	69·0	68·7	72·4	72·9	64·6	64·3	74·4	79·9
Total Establishments and Employees	6,729	786,396	2,138	28,455	1,478	52,206	1,335	94,138	839	117,412	557	169,232	192	133,199	90	191,754

(1) Establishments are distributed, in this table, according to the normal weekly hours reported for male employees. The entry shown in the adjacent column under employees comprises female workers only.

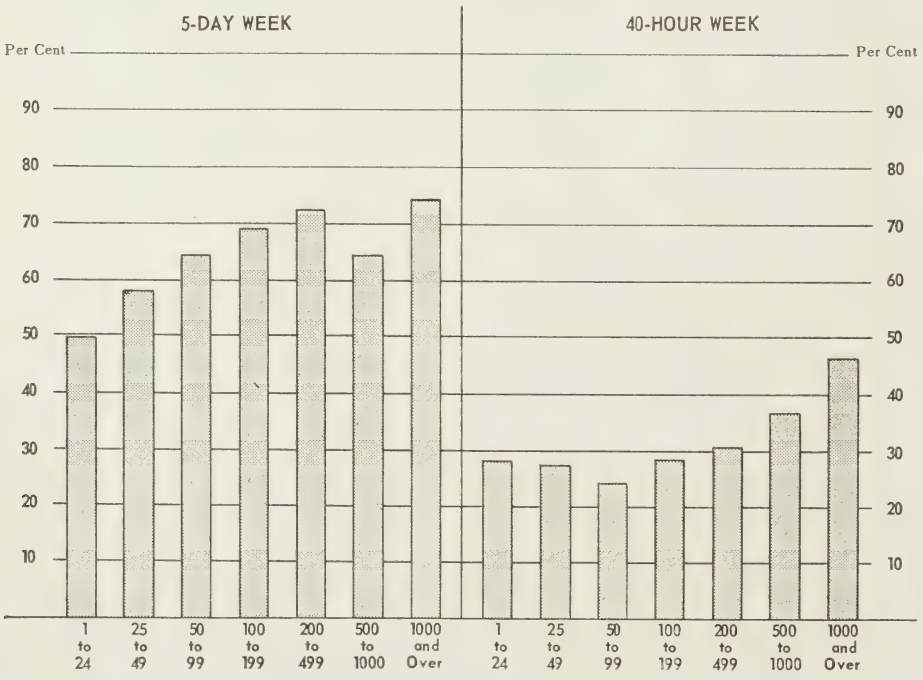
Five-Day Week

The proportion of establishments having the five-day week increases with each successive size group, with one notable exception:—

Size of Establishment (Number of Plant Employees)	Per Cent of Establishments on Five-day Week
Fewer than 25	49·6
25– 49	58·1
50– 99	64·6
100–199	69·0
200–499	72·4
500–999	64·6
1,000 and more	74·4

It will be noted that only half the establishments with fewer than 25 employees are on a five-day week but that the proportion rises to three-quarters in the case of establishments having 1,000 or more workers.

On the other hand, a comparatively low proportion of the establishments in the size group 500 to 999 employees are on the five-day week. Examination of the establishments in this size group reveals that it contains a high proportion of firms in the pulp and paper industry in which the 48-hour week is prevalent. This fact tends to modify the trend otherwise found that the five-day week is more common in larger than in smaller establishments.



Forty-Hour Week

The analysis shows that the 40-hour week is slightly more common in establishments with fewer than 25 employees than it is in establishments with 25 to 100 workers. On the other hand, an appreciably larger proportion of the establishments with 500 or more workers are on the 40-hour week and a still larger proportion are in the category with 1,000 and more employees.

Size of Establishment (Number of Plant Employees)	Per Cent of Establishments on 40-hour Week
Fewer than 25	28·1
25– 49	27·5
50– 99	24·4
100–199	28·4
200–499	30·5
500–999	37·0
1,000 and more	46·8

PERCENTAGE OF ESTABLISHMENTS ON 5-DAY AND 40-HOUR WEEK GROUPED BY SIZE OF ESTABLISHMENT

Manufacturing Industries of Canada, October 1951

It will be noted that a much higher proportion of manufacturing establishments have the five-day week than the 40-hour week. In a general way, the trends in the figures for the five-day week and the 40-hour week resemble one another, in that both reveal a greater incidence among the larger establishments. The trends are not closely similar, however.

10th Federal-Provincial Conference on Farm Labour Held in Ottawa

Delegates report movements of farm workers again successfully carried out in 1952, farmers generally satisfied with workers they received. Federal Government willing to continue joint farm labour program in 1953 if provinces so wish, Deputy Minister Arthur MacNamara indicates

Movements of workers under the farm labour program were again successfully carried out in 1952. Delegates to the 10th Federal-Provincial Farm Labour conference at Ottawa, December 3-5, reported that farmers generally were satisfied with the workers they received.

The quality of immigrant farm workers was higher than in previous years but trouble was again experienced through failure of a number to carry out their undertaking to remain on the farm for the required 12-month period.

Willingness on the part of the federal Government to continue the joint farm labour program for another year if the provinces so desire was indicated by Dr. Arthur MacNamara, Deputy Minister of Labour. Most of the delegates were of the opinion that their governments would enter into agreements for 1953 should the plan be continued.

The three-day conference was attended by directors of farm labour and other officials from all provinces except Newfoundland. W. W. Dawson, Director, Special Services Branch of the Department of Labour, presided.

Also in attendance were officials of the National Employment Service, the federal Departments of Agriculture, Citizenship and Immigration, and Labour; and representatives of the Canadian Federation of Agriculture, the United Kingdom High Commissioner's office, the Netherlands Embassy, and the United States Employment Service.

Main items on the agenda were: reports of provincial directors of farm labour and regional employment officers on the past year's activities, regional changes in farming methods and their relation to labour requirements, manpower outlook for 1953, farm labour program for 1953, and immigration program.

Address of Dr. Arthur MacNamara

Welcoming the official representatives, Dr. Arthur MacNamara, Deputy Minister of Labour, said the federal-provincial farm labour program has a history of which all can be proud. It has brought into the picture, he said, the Department of Labour and the National Employment Service; but if it had not been for the co-operation of the Department of Citizenship and Immigration and the Department of Agriculture, it would not have been possible to carry out the program.

The Deputy Minister said he did not know of anything in his field that has worked better for the farmers. In 1952, the wheat crop was the biggest ever harvested in Western Canada and he doubted if there had been fifty complaints of farmers being short of labour.

If it is the wish of the provinces that the farm labour program be continued for another year, and if they so recommend, the federal Government, he was sure, would be willing to enter into agreements with the provinces for 1953.

Provincial Directors' Reports

Prince Edward Island—Labour requirements in the province, it was reported, were lower in 1952 than in previous years. Fewer workers were needed for pulpwood operations and so more labour was obtainable locally.

The first seasonal movement consisted of 27 men to assist with the hay crop. The men were very satisfactory and many remained throughout the summer and fall. Potato harvesting requirements were lower than in former years, because of fine weather and the use of more mechanical pickers; only 504 vacancies were filled, 280 of which were brought into the province.

Immigrant farm workers generally had proved satisfactory. Under the assisted passage plan, 36 German nationals were placed in the province. An additional number was placed through the Department of Immigration. Some of these immigrants did not have previous farm experience but were willing to work and anxious to learn all they could. At least eight single men and two families from The Netherlands were placed during the year; all gave excellent service.

Two factors present difficulty in the placement of workers on the farm, it was explained. One is the lack of living accommodation for a married man with a family and the other is that additional help is required for only six or seven months of the year. Many farmers cannot afford to pay for additional help during the winter months; the livestock population is small and many farmers are able to carry on alone.

Nova Scotia—There was a brisk demand in the province for farm labour early in the spring and requirements could not be satisfied locally. Under the assisted passage plan, a group of workers arrived from West Germany and most of them proved satisfactory. A few had little or no farming experience but they seemed anxious to learn and to repay their passage money as soon as possible. They did not arrive as soon as required, however, and the delay caused some inconvenience and resulted in a number of cancellations by farmers who had requested help. Of the 36 workers in the group, 25 have remained with their original employers and six have been placed with other employers; the others left the province.

Immigration of farm workers from The Netherlands was greater than in the previous year. About 89 families, comprising 371 persons, and 80 single workers were placed on Nova Scotia farms during the year. Loans were granted to a number of immigrants to enable them to purchase their own farms.

Demands for apple pickers were light because of the small crop and most of the labour was obtained locally.

Three interprovincial movements of farm labour took place. These consisted of 240 potato pickers and 25 haymakers to Prince Edward Island and 146 haymakers to Ontario.

New Brunswick—Competition for farm labour in the province was lessened through the reduction of woods operations. This condition was partly offset, however, by a demand for labour in construction work. Spring seeding was delayed by wet weather, which development resulted in a demand for late labour. There was a shortage of labour for haymaking and a lot of hay was left uncut because the cost of harvesting was out of line with prices. No difficulty was experienced in harvesting the grain and potato crops. Approximately 900 students were employed on a daily basis for bean picking.

Immigrant workers placed on farms totalled 125 married men with families and 92 single men.

In response to a request from the state of Maine, a substantial number of workers was sent across the border to assist in harvesting the potato crop.

Quebec—The farm labour situation was less acute in 1952 because of a more normal distribution of manpower and greater mechanization, it was reported.

Principal farm labour movements consisted of Italian immigrants, sugar blockers, between 40 and 50 tobacco curers from the state of Maine, sugar beet harvesters, harvesters to the Prairie region, and potato pickers to the state of Maine.

During the year 345 Italian immigrants were placed on farms in Quebec. Farmers, on the whole, were satisfied with their services; some complained of "instability".

Sugar beet growers were supplied with 703 workers for thinning and rooting-out operations and 227 pullers. Because of the increasing use of mechanical pullers, fewer workers were required for this operation.

This year 66 boys and girls were sent to Ontario to assist with the fruit and vegetable crops; their services were reported to be satisfactory. These young workers, it seems, are glad to have the opportunity of increasing their knowledge of English and at the same time widening their experience.

Recruitment of workers for the Prairies is becoming increasingly difficult, it was stated, because of the need for a knowledge of mechanics. This year 604 were sent.

A new movement of workers took place during the year with the movement of 125 potato pickers to the state of New York. Satisfaction with the selection and co-operation was expressed by the United

States authorities. A large movement of potato pickers to the state of Maine was again successfully carried out.

Ontario—Farmers in the province had experienced a longer-than-usual season for field work, it was reported. Spring seeding went forward without a serious shortage of labour because of the favourable weather and a lull in industrial and building activity. Mechanization and good weather contributed to an early harvest.

The demand for transient tobacco harvesters was reduced because of a sharp decline in acreage, good weather and more local help. A hostel in Simcoe, Ont., relieved congestion among the thousands of workers who moved into the tobacco growing area. Curers brought in from the United States numbered 1,517, an increase of 54 over 1951.

A total of 20 farm labour camps supplied 706 boys and girls to 144 fruit growers in the province. In 1951, 24 camps supplied 1,133 young workers to 217 growers. Because of high cost of operation and the increasing availability of local labour, the Federal-Provincial Farm Labour Committee has recommended that the camp program be discontinued.

It was reported that, since 1949, about 1,300 Dutch immigrants have purchased farms in Ontario and many more are looking for properties. These families have increased the farm labour force. However, rapid industrial expansion is having a very direct effect on the labour problem. The proportion of the total population living on farms is declining steadily and in 1951 was only 14·7 per cent. Farmers, it was reported, are finding it difficult to compete with the construction industry, where wages are higher.

Farmers are showing an active interest in Workmen's Compensation. Already some 600 are covered and there has been a sharp increase in applications.

Farm placements in Ontario in 1952 were fewer than in 1951. A total of 1,066 German farm workers were brought into the province under the assisted passage plan. Another 331 single DP workers were enlisted at Ajax, Quebec and Sudbury. Some difficulty was experienced in keeping these immigrants in farm work because of the large number with special skills who were anxious to find work in their own trades. It was reported that of the whole group, 159 left farm work. Immigrant couples were easier to place than immigrant families as the latter often found existing accommodation inadequate. Altogether, there were 1,461 immigrant placements as compared with 2,091 in 1951.

Sugar beet thinning operations required fewer workers than usual because of the dry weather and 140 Italian workers borrowed from Quebec were found to be sufficient to satisfy the demand.

In the movement of workers to Ontario for harvesting, it was reported that Manitoba and Alberta supplied 174, the Maritimes and Newfoundland 349. There were 1,730 Ontario workers sent to the Prairies for harvesting by the National Employment Service, compared with 1,551 in 1951.

Manitoba—Unusually favourable weather in Manitoba rendered seeding conditions ideal, made possible the recovery of nearly all grain which had been left out during the winter and contributed to an all-time record crop.

The general labour situation was normal during the early spring. The number of placements was below that of 1951. However, the crop was harvested quickly and efficiently due to greater mechanization and the ideal weather conditions.

The 269 workers recruited from Eastern Canada for the wheat harvest were of high ability and behaviour, the farmers reported.

Manitoba sent only between 40 and 50 workers to Ontario as the appeal did not meet with much response.

Some 35 Dutch and German immigrants were placed on farms. These were very satisfactory and it was hoped they would continue in agricultural employment.

Wages showed a tendency to rise and experienced men were offered as high as $120 per month and board, it was reported.

Because harvest activities in Manitoba coincided with those of North Dakota, there was no movement of combines across the border.

Saskatchewan—In 1952 the 112,000 farmers in the province harvested the record total of 700 million bushels of grain, the largest crop in 60 years. Another 111 million bushels left over from the 1951 crop raised the year's total to 811 million bushels.

Mechanization reduced the seasonal demand for farm labour. At no time during the harvesting period was there an acute shortage of harvest labour in any of the nine National Employment Service zones.

Some 300 German workers were brought into Saskatchewan and placed on farms. A total of 100 beet workers from the Indian population went to Montana for the sugar beet crop there. Only 43 Saskatchewan workers were recruited for the British Columbia berry harvest.

Altogether, there were 4,481 placements through NES offices. Of these, 1,188 were

from Ontario and Quebec, 1,074 from Winnipeg, and 3,293 were local workers. Another 545 workers entered the province from the United States with custom combine crews, making a total of 5,026 placements.

It was estimated that some 4,000 farm workers entered the province on their own and found employment without reporting to NES offices.

Alberta—Supply and demand for farm workers were well balanced throughout the peak seasons of seeding and harvesting. Although labour demand was fairly brisk in the spring, local workers filled most vacancies.

At harvest time, the sharp demand was again met by local supply, supplemented by the east-west movement. Eastern workers became available as Manitoba and Saskatchewan finished their harvesting.

During the year, there was a large movement of immigrants to Alberta for sugar beet work. This group played a large part in cultivating and harvesting the largest beet crop in the history of the province.

A trend was reported towards a lower demand for farm workers over the years because of increased mechanization of farm work. Some difficulty was experienced in keeping immigrants on the farms.

British Columbia—A mild winter and an early spring contributed to better than average crops. Labour requirements in fruit, potatoes, hops and grain were met without difficulty until the end of May.

In anticipation of a strong demand for help with the berry crop, orders were placed for the movement of 500 women from the Prairies. However, the 92-day logging and sawmill strike which began in June released some 2,500 workers, sufficient to meet all demands. The prairie orders were cancelled after only 92 women had arrived.

Hutterites from South Alberta recruited to help with the soft fruit, hop, apple and potato crops were highly regarded by the growers.

There is a growing awareness, it was stated, that emergency situations in British Columbia must be met by local volunteers, especially where perishable crops are to be harvested. Boards of Trade and school boards were co-operating admirably in supplying local workers.

Industrial employment has seriously depleted the supply of competent permanent workers for agriculture but the situation in dairying and mixed farming is less critical than it was. Good ranch hands were scarce. Sheepherding had been gravely reduced as a result of lack of herders. As in other provinces, immigrants had not shown a desire to remain at farm work.

Farm placements were slightly higher than in 1951, and no complaints of lost crops due to lack of help were received.

Canadian Federation of Agriculture

Speaking for the Canadian Federation of Agriculture was R. A. Stewart, a director of the Federation. The Federal-Provincial Farm Labour conference, he said, helps facilitate the movement of farm labour from one part of Canada to another.

In 1953, he anticipated that the pattern would be much the same "but, of course, it will be largely influenced by weather and crop conditions". Farmers, he thought, will be more particular as to the type of help they get. At the present time, he said, there is a great deal of confusion in the minds of the farmers in regard to planning for the coming year. Under present conditions of surplus supplies and restricted markets, many farmers will curtail production and carry out operations with the minimum of hired help. Farmers must cut down expenses and there will be an effort on the part of more and more farmers to work together during peak periods.

Mr. Stewart spoke of the desirability of extending social benefits to agricultural workers. Coverage under the Unemployment Insurance Act and the Workmen's Compensation Acts, he said, would have the effect of holding workers on the farm.

Manpower Situation

W. Dymond, Economics and Research Branch, Department of Labour, presented an analysis of the current manpower situation and indicated some of the economic variables affecting the outlook for 1953.

High levels of industrial employment can be expected in 1953, he stated.

The general level of employment began to rise in mid-summer, Mr. Dymond stated, first because of seasonal activity in agriculture and construction and also because of renewed activity in the consumer goods and associated industries. The employment picture is better than last year and this is expected to be carried over into at least the greater part of 1953.

Unlike last year, this winter season is beginning with employment trends generally showing more strength. Seasonal unemployment will probably not reach as high levels during the winter of 1952-53 as it did a year ago, he predicted.

The one soft spot in the manpower outlook, he said, is in the logging industry where, because of a reduction in demand for pulps and the existence of substantial inventories, a reduction of employment is expected this winter.

A major factor contributing to high employment levels in the coming year is the increase in consumer expenditures, which lagged until July and August. In September, retail sales were more than six per cent above the comparable 1951 figure and during October, department store sales were 20 per cent higher than a year ago. As inventories are at a lower level than last year, increased expenditures will likely be followed more closely by increased production and employment, he said.

The probable level of construction employment next year, he continued, will depend upon future investment activities. A considerable volume of construction work is already assured as many large projects begun in 1952 will not be completed until late in 1953, or sometime in 1954. In addition, there are indications of increased investment activity in the service and distributive sectors of the economy. Also, the recently-announced intention of the federal Government to apply deferred depreciation regulations only on property acquired up to December 1952, will probably stimulate some increased investment activity next year in the fields concerned.

Defence expenditures will again be at high levels in 1953, with the emphasis swinging from non-durable items, and will act as a supporting influence on the economy.

With the expectation that there will be numerous job opportunities next year, Mr. Dymond concluded, the movement of workers from rural to urban areas is likely to continue.

W. K. Rutherford, Director of Employment Service, Unemployment Insurance Commission, said he concurred with Mr. Dymond's observations. He thought that the outlook for the next six months is much the same as in 1952, with the possibility of it being better from an employment point of view. The outlook is for a continuing high level of employment.

While logging operations will definitely decline, there are many favourable aspects to the situation, he said. Residential housing construction, for instance, will undoubtedly improve in the coming year. There will be the usual demands by various groups for panaceas. The farm implement workers are exercised over their situation; they want continuing employment in the industry. The backlog of farm machinery has been largely met and the industry is in a somewhat similar situation to that of the automobile industry, where the backlog has also been met.

The overall picture as compared with that of a year ago is that we have fewer unplaced applicants, he concluded.

Intra- and Interprovincial Movements

William MacGillivray, Director, Agricultural Development and Extension Service, reported that British Columbia, after much thought, has decided to discontinue farm labour camps. Conditions in the fruit and vegetable producing areas, he said, have changed to the point where the demand is not sufficient to warrant their establishment. There is no doubt that the camps have served a useful purpose and the growers have appreciated the assistance they have been to them.

International Movements

Dave Fessenden, Bureau of Employment Security, Washington, who brought greetings from the United States, said the Canadian situation closely paralleled that of the United States. Through co-operation under the Farm Labour Program, New England growers had a successful season. He expressed gratification that Canada was able to recruit so promptly on such short notice. The season was favourable but perhaps not as much so as in Canada; there was no concern over surpluses. Agricultural placement figures were up in spite of bad weather conditions.

It is impossible to forecast what the demands for non-seasonable workers will be until the impact of the proposed amendments to the Immigration Act is known, he said.

Farm Labour Requirements

It was estimated that approximately 3,500 immigrant farm workers would be required in 1953. The delegates could give only tentative estimates of their requirements but generally they will require about the same number as had been received in 1952.

On the subject of regional changes in farming methods and their relation to labour requirements, M. C. Crosbie of the National Employment Service reported that between the census years 1941 and 1951 the number of farms in Canada had decreased by about 58,000 and the total farm population by 250,000. However, there was an increase in improved land of some five million acres and the increase

in field crops was about six million bushels. It was concluded that there was an increase in the land worked with the men available. This increase was due, among other things, to the greater use of farm machinery. Sales of farm tractors doubled in 1947, with steady increases in 1948 and 1949, and another large increase in sales of heavy tractors in 1951.

In Mr. Crosbie's opinion, Canadian agriculture was not yet near the saturation point in mechanization. At the same time, some delegates expressed a doubt whether farm machinery actually did result in the hiring of less labour on small farms.

It was noted that Workmen's Compensation was helping to improve employment conditions on farms.

Dr. W. F. Darke, Agricultural Adviser to the United Kingdom High Commissioner, reported that the labour situation in Great Britain is still acute in view of the renewed food production effort. He estimated the total number of agricultural workers in the United Kingdom at 663,300.

Immigration

J. A. Paul of the Department of Citizenship and Immigration told the delegates that Germany and other North European countries where farming conditions are similar to those in Canada will be looked upon as the main source of farm immigrants in 1953.

However, he said, in some of these countries Canadian immigration offices must wait for nationals to apply. The DP phase of immigration is over and it is now a matter of persons of one country being fitted into the society of another.

The delegates agreed that immigrant labour placed on farms in 1952 was generally satisfactory. They emphasized the importance of proper selection and of having immigrant workers arrive in time for farm operations.

It was felt that quoting only the wage rate to prospective immigrants did not present a true picture and that a cash value should be placed on board. They might be shown the difference between working and living in the city and working on the farm, where living is provided.

The delegates felt there should be more co-operation among the different public and private agencies at the provincial level so that duplication of orders for immigrant help by farmers might be avoided.

Federal-Provincial Agreements

The general feeling was that most of the provinces were in favour of continuing the program next year and of entering into agreements for 1953.

Those Present

Provincial officials who attended the Conference were S. D. Peacock, Department of Agriculture, Prince Edward Island; S. E. Lewis, Director of Farm Labour, Department of Agriculture and Marketing, Nova Scotia; E. M. Taylor, Chairman, Federal-Provincial Farm Labour Committee, New Brunswick; A. J. Rioux, Director, Farm Labour Supply Bureau, Department of Agriculture, Quebec; J. A. Carroll, Assistant Deputy Minister of Agriculture, Ontario; A. J. McTaggart, Director, Ontario Farm Service Force, Department of Agriculture, Ontario; H. R. Richardson, Director, Farm Help Service, Department of Agriculture and Immigration, Manitoba; L. J. Hutchison, Director of Agricultural Representatives, Department of Agriculture, Saskatchewan; F. H. Newcombe, Director of Agricultural Extension Service, Department of Agriculture, Alberta; and W. MacGillivray, Director, Agricultural Development and Extension Service, Department of Agriculture, British Columbia.

National Employment Service officials included W. K. Rutherford, Director of Employment Service, Ottawa; W. Duncan, Chief, Employment Specialists, Ottawa; M. C. Crosbie, Employment Adviser, Primary Industries, Ottawa; D. W. Hay, Employment Adviser, Atlantic Region, Moncton, N.B.; A. Ouimet, Employment Adviser, Quebec Region, Montreal; W. Davison, Employment Adviser, Ontario Region, Toronto; H. D. Hurdon, Employment Adviser, Prairie Region, Winnipeg, Man.; F. C. Hitchcock, Employment Adviser, Regina, Sask.; and W. L. Forrester, Supervisor of General Placements, Pacific Region, Vancouver, B.C.

Departments of the federal Government were represented by J. F. Booth, F. R. Armstrong and J. Dawson of the Department of Agriculture; J. A. Paul and R. M. Winter of the Department of Citizenship and Immigration; and J. L. Forsyth, R. S. Ellis and P. Stuchan of the Department of Trade and Commerce.

Others in attendance were: R. A. Stewart, Canadian Federation of Agriculture; W. F. Darke, Agricultural Adviser to the United Kingdom High Commissioner; A. S. Tuinman, Agricultural Attaché, Royal Netherlands Embassy; F. B. Kirkwood, Canadian National Railways; D. W. Fessenden, Bureau of Employment Security, Washington, D.C., and A. F. Gillespie, Bureau of Employment Security, Boston, Mass.

Fatal Industrial Accidents in Canada* During the Third Quarter of 1952

Industrial fatalities during the third quarter of 1952 numbered 363, a decrease of three from 366 recorded during the previous quarter

There were 363† industrial fatalities in Canada in the third quarter of 1952, according to the latest reports received by the Department of Labour. This marks a decrease of three fatalities from the previous quarter, in which 366 were recorded, including 25 in a supplementary list.

As in previous quarterly articles, Table H-1 contains information as to the number of industrial fatalities classified by main classes of industries and causes. The present table is compiled in accordance with the new clause classification adopted January 1, 1952. This new classification has been drawn up in consultation with the various provincial Workmen's Compensation Boards and will be used in the preparation of statistics to be derived from the federal-provincial accident statistics program which will deal with non-fatal as well as fatal accidents. As used in the present article, the new classification contains only the major groups of causes.

During the quarter under review, six accidents resulted in the deaths of three or more persons in each case. On July 3, a fishing vessel, the *Daisy B*, disappeared off the coast of British Columbia with seven men aboard. At Glace Bay, N.S., seven miners were killed in a underground explosion July 9. Seven employees of the Manitoba Government lost their lives in a plane crash at Berens River, Man., on July 21. A railway accident at Seven Islands, P.Q., on September 12 resulted in the deaths of two construction workers and two employees of a mining company. The four men were in a railway caboose struck by a flat car rammed into it by a runaway diesel locomotive. On September 15, three tobacco workers were killed when the car in which they were travelling was in collision with a truck near Langton, Ont. At the time of the accident the three men were being driven back to the farm where they were regularly employed after spending the day working at a neighbouring farm. On September 25, at Port Arthur, Ont., four men lost their lives as the result of a dust explosion at the grain elevator where they were working.

Grouped by industries, the largest number of fatalities, 75, was recorded in the construction industry. Of these 43 were in miscellaneous construction, 20 in buildings and structures and 12 in highway and bridge construction. In the previous three months there were 55 fatalities listed in this industry, including 24 in miscellaneous construction and 18 in buildings and structures.

There were 54 industrial deaths in manufacturing during the third quarter of 1952, of which 14 occurred in the wood products group and eight in the paper products industry. During the preceding three months there were 68 fatalities recorded in manufacturing, including 16 in each of the

(Continued on page 117)

The industrial fatalities recorded in these quarterly articles, prepared by the Economics and Research Branch, are those fatal accidents which involved persons gainfully employed and which occurred during the course of, or which arose out of, their employment. These include deaths which resulted from industrial diseases as reported by provincial Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries which are covered by compensation legislation. Similarly, a small number of traffic accidents which are in fact industrial accidents may be omitted from the Department's records because of lack of information given in press reports.

*See Tables H-1 and H-2 at end of book.

†The number of industrial fatalities which occurred during the third quarter of 1952 is probably greater than the figure now quoted. Information on accidents which occur but are not reported in time for inclusion in the quarterly articles is recorded in supplementary lists and statistics are amended accordingly.

International Labour Organization

Meeting of Experts Proposes Measures to Raise Productivity

Sixteen experts of 13 different nationalities, after intensive 10-day study make specific proposals for increasing productivity within the factory. George V. Haythorne of Department of Labour was chairman

Sixteen experts of 13 different nationalities have concluded an intensive ten-day study of methods of increasing productivity in the world's manufacturing industries. The chairman was George V. Haythorne, Director, Economics and Research Branch, Department of Labour.

The meeting was convened by the Governing Body of the International Labour Organization as part of the ILO's continuing program of activities aimed at raising living standards by increasing the production of goods and services.

The experts' conclusions were embodied in a report which will be considered by the Governing Body at its next session in February. They recommended that the report should be widely publicized but agreed that it should remain confidential until the Governing Body had examined it.

The agenda of the meeting called upon the experts (1) to consider practical methods of increasing productivity in manufacturing, with particular reference to the human factors and to the organizational and technical factors involved, and (2) to advise the ILO on its future program relating to productivity.

The meeting arrived at a number of general conclusions, and also reached agreement on a series of specific proposals aimed at increasing productivity within the factory.

The session was attended by representatives of the Government, employer and worker members of the Governing Body, and by representatives of various intergovernmental and international non-governmental organizations. The experts attending were drawn from employer, worker and independent circles.

Summing up their views on the general aspects of the problem of raising productivity, the experts agreed that it was of the utmost importance, if higher productivity was in fact to lead to higher living standards, that its benefits should be equitably distributed among capital, labour and consumers. It was equally important that the demand for goods and services should be maintained at a sufficiently high level and that adequate measures should be taken to prevent higher productivity from leading to unemployment. Failure to distribute widely the benefits of increased productivity and to maintain demand and employment would mean that the conditions for continuing increases in productivity would not exist.

The achievement of higher productivity, it was agreed, called for action on the part of governments, employers and workers. Governments had responsibility for creating conditions favourable to higher productivity by promoting a balanced program of economic development and by adopting appropriate economic and social policies in such matters as foreign trade, capital formation, monopolistic practices, and the supply of raw materials.

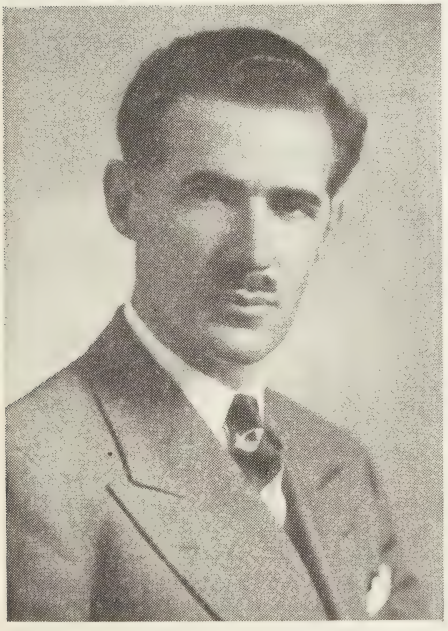
Higher productivity called for concerted efforts on the part of members of all groups engaged directly or indirectly in production. Such efforts might require in some cases far-reaching changes in the attitudes of all concerned.

Full co-operation on the part of all groups could be expected only in a society which accepted principles of social justice and in which it was recognized that the fundamental purpose of industry was to serve the needs of society as a whole.

Among their other conclusions, the experts expressed the view that the share of workers in the benefits of higher productivity might take the form in part of higher wages, in part of lower prices for the goods produced, and in part of better working conditions, including shorter hours, social services, and improved housing.

Improvements in equipment and techniques might make it necessary for some workers to change their jobs. Measures to increase productivity should therefore be accompanied by measures to protect the interests of any workers who might lose their jobs or be threatened with the loss of jobs.

There was an urgent need for further experiment, investigation and research into the influence of the various factors affecting productivity.



The experts reached a number of general and specific conclusions on the question of raising productivity at the plant level.

They agreed that primary responsibility for action in the individual undertaking rested with management. They were also in agreement, however, that no effort to increase productivity could succeed without good relations between management and the workers concerned.

Increased productivity in the undertaking called for action in three main fields: the organization and control of production, personnel policy, and plant and equipment. In each of these fields, the experts made a number of detailed practical recommendations.

The experts suggested that the ILO's work in the field of productivity should have three main objectives: (1) to promote wider understanding of the subject; (2) to ensure that increased productivity led rapidly to improvements in economic and social welfare and (3) to provide technical assistance and advice on the raising of productivity.

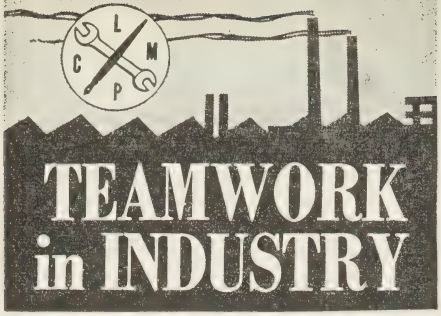
ILO Names Two Canadians to High Positions

Douglas M. Young

Douglas M. Young, Personnel Director of Lever Bros., Canada, has been named Head of the personnel office of the International Labour Office, it was announced by David A. Morse, ILO Director-General.

Another ILO appointment of interest to Canada is that of William Yalden-Thomson of Toronto to the position of Assistant Director-General. Mr. Yalden-Thomson has been Chief of Operations in charge of co-ordinating all ILO projects and activities under the Expanded Technical Assistance Program. In his new post he will continue to direct the ILO's operational activities, now being greatly expanded.

His first appointment to the ILO was in 1951 as Chief of the Employer Relations Division (L.G., Oct., 1951, p. 1332).



Mr. Young, a resident of York Mills, Ont., is chairman of the Canadian Manufacturers' Association's Committee on Old Age Pensions and a member of the Association's Industrial Relations Committee. He was President of the Personnel Association of Toronto in 1949-50 and a member of its Advisory Council.

In his new post, Mr. Young will not only be personnel chief for some 700 ILO officials throughout the world but will also assist in personnel matters affecting several hundred experts sent to less-developed countries on ILO projects.

Toronto-born and a graduate of Queen's University, Kingston, Ont., Mr. Young has served on the Ontario Regional Employment Committee of the National Employment Service and as chairman of the professional section of the Toronto Welfare Council's Committee on Job Evaluation.

He was Canadian employer delegate to the ILO's Conference of American States in Brazil in April last year.

67040—4½

Year-old LMPC Progresses Rapidly

The record of the labour-management production committee at the Maple Leaf Milling Co., in Toronto, is one of steady achievement. This LMPC, which was founded a little more than one year ago, has progressed rapidly since that time. The original impetus for the committee came from one of the employees who suggested that there was a need for some method whereby management and labour could discuss their common problems.

The committee's main objective has been expressed by I. J. Young, Plant Manager, in an article appearing in "The Flour Bag", LMPC-sponsored paper, as follows:—

"Our main objective is to improve efficiency through greater co-operation between the two groups. It is a joint enterprise. It is a two-way communication channel for the exchange of ideas and information. It should be an instrument to make possible: plant action on production, conservation, recreation, welfare, morale, absenteeism, safety and any number of important problems. It is an advisory board only. It studies problems, then makes recommendations. It is not a device to be used by either management or labour for their own ends. It is a joint venture for the promotion of their common enterprises."

Discussing the LMPC, Mill Superintendent Lloyd Rupert said that it has built up a feeling of team spirit and that its success is basically tied to the attitude of the people working in the plant.

Among the activities which the committee has engaged in are production, safety, suggestions, publicity, welfare, recreation, good housekeeping and an employees sick benefit fund.

The safety sub-committee has been particularly active and, through its efforts, a safety record of 122 days had been established up to mid-November. Two departments in the plant had gone for 350 days without a lost-time accident. The management estimates that, because of this group's work, accidents of all types have been cut by about 50 per cent.

In summing up the first year's activities of the Maple Leaf Milling LMPC, Mr. Young said:—

"I think we have done not too badly and, after having gone through this trial year, fully believe we have ended up with some worthwhile results. We, no doubt, have made some mistakes—yes—but we profit by them, and as time goes on and we continue its existence I think more beneficial results will follow."

Local 174 of the American Federation of Grain Millers (AFL) is the bargaining agent participating in this LMPC.

* * *

A story of achievement and improved labour relations was recently told in the *Cobourg Sentinel-Star*. The story was about the LMPC at the Dominion Wheel and Foundries Ltd, Cobourg plant, where an LMPC has been operating for the past two years.

In writing on the LMPC, the *Sentinel-Star* said: "The committee, which is composed of five labour representatives and two representatives of management, has proved its capabilities by developing excellent relations within the local firm and reducing or eliminating conditions which prove disadvantageous to both labour and management.

"Many changes which originated at meetings of the Labour-Management Production Committee have been made in the plant. Production materials and alterations were recommended, and both the quantity and quality of production have been considerably improved. Such measures have also tended to reduce absenteeism to a minimum.

"The successful slogan of the successful committee is 'A shop with harmony, better working conditions, better products and better production leads to better security for the employees.'"

Labour representatives on this LMPC are members of Local 189, International Moulders and Foundry Workers' Union of North America (AFL-TLC).

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service. Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Industrial Relations and Conciliation

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during November. The Board issued five certificates designating bargaining agents, ordered two representation votes and rejected two applications for certification. During the month the Board received one application for certification.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations and the Industrial Relations Branch of the Department.

Applications for Certification Granted

West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel of the deck, engineroom and steward's departments employed by Kingscome Navigation Company Limited, Vancouver, B.C. (L.G., Dec., 1952, p. 1583).

West Coast Seamen's Union (Canada), applicant, on behalf of a unit of deck, engineroom and steward's departments employed by Straits Towing Limited, Vancouver, B.C. (L.G., Dec., 1952, p. 1583).

West Coast Seamen's Union (Canada) on behalf of a unit of deck, engineroom and steward's departments employed by Vancouver Tug Boat Co. Ltd., Vancouver, B.C. (L.G., Dec., 1952, p. 1583).

West Coast Seamen's Union (Canada) on behalf of a unit of deck, engineroom and steward's departments employed by Monarch Towing and Trading Co. Ltd., New Westminster, B.C. (L.G., Dec., 1952, p. 1583).

Canadian Merchant Service Guild Inc. on behalf of a unit of deck officers on SS *Cedarton* and SS. *Birchton* operated by Gulf and Lake Navigation Co. Ltd., Montreal, P.Q. (L.G., Nov., 1952, p. 1467).

Representation Votes Ordered

The Board ordered representation votes of employees in the following applications for certification:—

1. Grand International Brotherhood of Locomotive Engineers, applicant, and Shawinigan Falls Terminal Railway, respondent (locomotive engineers) (L.G., Nov., 1952, p. 1465).

2. Grand International Brotherhood of Locomotive Engineers, applicant, and Shawinigan Falls Terminal Railway, respondent (helpers on locomotives) (L.G., Nov., 1952, p. 1465).

Application for Certification Received

Maintenance Workers Federal Union No. 493 on behalf of a unit of maintenance employees of the Canadian Pacific Railway Company (B.C. Coast Steamship Service) (Investigating Officer: D. S. Tysoe).

Applications for Certification Rejected

1. Seafarer's International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed by Howe Sound Lines Limited, Vancouver, B.C. (L.G., Nov., 1952, p. 1466). The application was rejected in view of the decision of the British Columbia Courts in the case of General Theatre Supply and Labour Relations Board (British Columbia) quashing an order of certification of the British Columbia Labour Relations Board issued in respect of a unit consisting of one employee only.

2. Order of Railway Conductors of America on behalf of a unit of road train conductors employed by the Canadian Pacific Railway Company on its Prairie and Pacific Regions (L.G., Oct., 1952, p. 1351). The application was rejected for the reason that the applicant did not have the support of a majority of the employees affected.

Conciliation and other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During November the Minister appointed Conciliation Officers to deal with the following disputes:—

1. Midland Railway Company of Manitoba and Order of Railway Conductors of America (Conciliation Officer: R. H. Hooper).

2. Union Steamships Limited, Vancouver, and Canadian Communications Association (Conciliation Officer: G. R. Currie).

3. British Columbia Steamship Co. Ltd., Vancouver, and Seafarer's International Union of North America, Canadian District (Conciliation Officer: G. R. Currie).

4. Shipping Federation of British Columbia and Northland Navigation Co. Ltd., Vancouver, and Local 38/163, International Longshoremen's Association (Conciliation Officer: G. R. Currie).

Settlement Reported by Conciliation Officer

During the month the Minister received a report from G. R. Currie, Conciliation Officer, advising of the settlement of the dispute between Canadian Pacific Railway Company (British Columbia Coast Steamship Service) and Machinists, Fitters and Helpers Local No. 3 (L.G., Dec., 1952, p. 1584).

Conciliation Board Appointed

During November the Minister established a Board of Conciliation and Investigation to deal with matters in dispute between the Searle Grain Co. Ltd., Pacific Elevators Ltd., United Grain Growers Ltd., Kerr Gifford & Co. Inc., Alberta Wheat Pool, all of Vancouver, and the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America. The Board had not been fully constituted at the end of the month.

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation established in September to deal with matters in dispute between the Canadian Overseas Telecommunications Corporation, Montreal (operators) and Overseas Communication Union Local 272 (L.G., Dec., 1952, p. 0000) was fully constituted in November with the appointment of Prof. H. D. Woods, Montreal, as Chairman. Prof. Woods was appointed by the Minister on the joint recommendation of Theodore R. Meighen, QC, of Montreal, and A. Andras of Ottawa, who had been previously appointed on the nominations, respectively, of the company and union.

Conciliation Board Reports Received

During November the Minister received the following reports of Boards of Conciliation and Investigation:—

1. Canadian National Railways, Canadian Pacific Railway Company, Toronto, Hamilton and Buffalo Railway Company and Ontario Northland Railway and various railway labour organizations acting through a joint negotiating committee representing, mainly, non-operating employees of the companies (L.G., Oct., 1952, p. 1352). Texts of the Board's report and the minority report are reproduced below.

2. McCabe Grain Company Limited (Shamrock Elevator and Feed Mills, St. Boniface) and Local 105 International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., June, 1952, p. 756). Text of the Board's report is reproduced below.

3. Keystone Transports Limited and Canadian Merchant Service Guild Inc. (L.G., Nov., 1952, p. 1467). Text of the Board's report is reproduced below.

The first five-day, 40-hour week in a British Columbia hospital went into effect January 1.

An agreement between the Vancouver General Hospital and Local 180, Hospital Employees Federal Union (TLC) provides for the reduction in working hours with no reduction in take-home pay. Nurses are included.

The agreement also provides for a three-per-cent salary increase for male employees and a two-per-cent pay boost for female employees.

Most British Columbia hospitals are on a 44-hour work week.

Report of Board in Dispute between

Canadian National Railways, Canadian Pacific Railway Company, Ontario Northland Railway and Toronto, Hamilton and Buffalo Railway Company

and

Various National and International Railway Labour Organizations Representing Non-operating Employees

On November 24, 1952, the Minister of Labour received the majority and minority reports of the Board of Conciliation and Investigation appointed to deal with a dispute affecting various national and international railway labour organizations representing non-operating employees of Canadian National Railways, Canadian Pacific Railway Company, Ontario Northland Railway, and the Toronto, Hamilton and Buffalo Railway Company (L.G., Oct., 1952, p. 1352).

The Board was composed of the Hon. Mr. Justice R. L. Kellock, Chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Paul S. Smith, QC of Montreal, and David Lewis of Toronto.

The majority report, which under the provisions of the Industrial Relations and Disputes Investigation Act constitutes the report of the Board, was signed by the Chairman and Mr. Smith. The minority report was submitted by Mr. Lewis.

The texts of the majority and minority reports are reproduced herewith.

The matters referred to this board are itemized in the notice dated July 3, 1952, served by the employee organizations concerned upon the railway companies, and are as follows:—

1. Effective September 1, 1952, rates of pay shall be increased by forty-five (45¢) cents per hour applied so as to give effect to this increase in pay irrespective of the method of payment.

2. Effective September 1, 1952, in addition to the basic wage rates, there shall be paid a cost-of-living bonus of one (1¢) cent per hour, for each rise of one point in the Index Numbers of The Cost of Living in Canada from that date.

3. All employees now or hereafter employed in any work covered by the rules and working conditions agreements between the parties hereto shall, as a condition of continued employment in such work, within sixty days following the beginning of such employment or the effective date of this agreement, whichever is later, become members of, and thereafter maintain membership in good standing in, the organization party to this agreement. Provided, that such condition shall not apply with respect to any employee to whom such membership is not available upon the same terms and conditions as are generally applicable to any other member or with respect to any employee to whom membership was denied or terminated for any reason other than the failure of the employee to tender the periodic dues, initiation fees, and assessments (not including fines and penalties) uniformly required as a condition of acquiring or retaining membership.

4. The Railway shall without cost to the organization periodically at such times and intervals as may be agreed upon, deduct from the wages of all employees now or hereafter employed in any work covered by the rules and working conditions agreement between the parties hereto all periodic dues, initiation fees, and assessments (not including fines and penalties) uniformly required as a condition of acquiring or retaining membership in such organization, and shall pay the amount so deducted to such officer of the organization as the organization shall designate: provided, that the requirements of this section shall not be effective with respect to any individual employee until he shall have furnished the Railway with a written assignment to the organization of such membership dues, initiation fees and assessments, which shall be revocable in writing after the expiration of one year or upon the termination of this agreement whichever occurs sooner.

5. Eliminate the so-called "Emergency Clause" which appeared as supplement No. 2 on page 21 of the "Master Agreement" dated January 30, 1951.

The names of the employee organizations represented before the Board are set out in Appendix 1 hereto, and the names of the railways similarly concerned are set out in Appendix 2. The number of employees directly affected in these proceedings is 143,690 out of a total number of 161,533 non-operating railway employees. The railways concerned operate 92 per cent of the total railway mileage in Canada.

At the time of the service of the notice of July 3, 1952, upon the railways, there were current between the parties collective agreements due to expire on September 1 following. Following the notice, negotiations took place between the parties from July 7 to 11, during which the railways offered an increase of 7 per cent in wage rates in settlement of all matters covered by the notice. This was refused by the employees. The parties being unable to make progress, a conciliator was appointed and further negotiations took place between July 22 and August 2, but agreement was not reached on any of the matters in dispute. This Board was thereupon appointed, its personnel being completed on August 28, 1952.

At the request of the parties, and for their convenience, the Board did not commence hearings until September 22, sittings being continued through the 23, 24 and 25 of that month when, upon joint request of the parties, the sittings were adjourned to October 3 and continued through October 6 and 7, being completed on October 8. Subsequently, the Board required and obtained on October 28 from the Economics and Research Branch of the Department of Labour further statistical material which was submitted to the parties for such comment or further evidence any of them might see fit to submit, but no further representations were made to the Board.

Dealing with the first item contained in the notice of July 3, 1952, the claim for "a flat wage increase of forty-five cents per hour," the matter is thus put in the employees' written statement:—

> Principal Factors on Which the Wage Demand is Based
>
> The Brotherhood are asking for wage and salary increases in the amount of 45 cents per hour. The factors on which their demands are based are as follows:
>
> (1) The necessity for adjusting wages and salaries to the increase in the cost of living since March 1, 1948.
> (2) The desire of the employees to obtain compensation for the lowering of their standard of living or for the deficiency in wage payments in terms of purchasing power since 1939.
> (3) Social justice, and the enactment of the moral rights of the railway employees necessitates they be not excluded from the over-all improvement of the living conditions of the Canadian people since 1939.
> (4) The obligation of the employers to continue real wage increases which were interrupted during the war years.
> (5) The necessity for giving railway employees financial recognition for their productivity and efficiency which has nearly doubled during the last twenty years.
> (6) The wish of the Canadian railway employees to regain wage parity with U.S. railway employees which existed from 1918 to 1922.
> (7) The deterioration of the economic position of the Canadian railway employees in relation to other Canadian wage earners.

In view of the fact that the above figure of 45 cents has been stated by the organizations to be the amount required to bring about parity between the Canadian and the United States non-operating railway worker, it might be desirable to begin with a consideration of No. 6 of the above heads, but we think it more convenient to deal first with Nos. 1 to 4, and as these are interrelated, we propose to consider them as a group.

In the examination of the relation obtaining between wages on the one hand and the cost-of-living index on the other, as a basis upon which the union demand for an increase might be measured, the unions reject the year 1939 as a proper starting point, although from the way in which head 2 above is stated, it might appear that that year was being taken as a base year. As put by them in their written statement:—

> The brotherhoods have repeatedly declared that they refuse to use the year 1939 as the basic year for any wage determination. The start of any discussion could be March 1, 1948.

March 1, 1948, was the date to which, under an agreement between the parties

of the 16th of July, 1948, the wage increase of 17 cents per hour thereby provided for, was made retroactive. Since that time, however, under the provisions of the Maintenance of Railway Operation Act, 14-15 Geo. VI, c. 1, enacted August 30, 1950, wage rates were increased by an additional 7 cents and standard hours of work were reduced from 48 to 40 hours per week, overtime rates applying to any excess. The effective date of the increase in wages was "the day on which the employees return to work pursuant to this Act," which may be taken to have been August 31. The effective date on which the actual reduction of hours took place was June 1, 1951. It is the contention of the railways that this last mentioned date is the date which should be taken as the starting point.

Reference to the award made in the arbitration under the statute of 1950 shows that an analagous situation arose there, the unions contending that the point of departure from which the relation between wage rates and the cost-of-living index should have been regarded on September 1, 1950, was the year 1948 after the settlement then effected. They contended that the increase of 17 cents granted at that time, however unwillingly agreed to on either side, had established a new standard of living for the employees, and that there should be no attempt to go behind the wage rate—cost-of-living relationship then established.

The railways, on the other hand, were contending that 1939 was the proper starting point, a time, in their view, of comparative stability. On this issue the arbitrator decided that he could not re-try the merits of the dispute of 1948, and accordingly took June 1, 1948, as the starting point from which to consider the situation which existed in September 1950, in view of the fact that, although the date of the settlement was July 16, 1948, and was made retroactive to March 1 of that year, the cost-of-living figure as of June 1 had then been published. In his opinion, the settlement must have taken into consideration all the then known facts.

Similarly, in the present instance, we think that the proper starting point should be September 1, 1950, for the reason that, although the 40-hour week was not to come into operation until June 1, 1951, the statute required that due regard be given to that fact in setting the wage rate increase ultimately fixed at 7 cents as of the date of the return to work. In other words, the statute operated to effect a settlement upon and from September 1950, although the employees continued to work the longer hours until June 1, 1951.

The cost-of-living index on September 1, 1950, stood at 169·8 and had risen by September 1, 1952, to 186·5, an increase of 16·7 points or 9·8 per cent. The average hourly rate on September 1, 1950, after the increase of 7 cents, was 108·9 cents for the then existing standard work week of 48 hours, or its equivalent for 40 hours, 129·3 cents. Increasing this rate by 9·8 per cent gives 12·67 cents as the amount required to adjust the wage rate to the increase in the cost of living since September 1, 1950.

The above result may be checked on the basis of average weekly earnings. In the case of the 148,463 non-operating employees concerned in the arbitration of 1950, the standard work week was 48 hours for all except the 21,500 back-shop employees who were on a 44-hour week. The average work week was accordingly 47·4 hours and weekly earnings $51.62. Increasing this by 9·8 per cent, the indicated weekly rate is $56.68, showing a deficiency in the present rate of $4.96 or 12·4 cents per hour.

The evidence shows that since the year 1939, a substantial majority of the non-operating railway employees are, at present rates, in receipt of larger real wages than at that time. There are some 280 different wage or occupational groups involved.

It would be a simple matter either to increase all groups by 9·8 per cent or to use the amount of money thereby involved to increase the rates payable to those groups who are not as well off as in 1939 in terms of real wages so as to restore them to the position they enjoyed in 1939 or even in September 1950. Such a course would seem more reasonable than to give the same increase in cents per hour to all employees, which would have the effect of improving further the position of those who are already as well or better off without, perhaps, placing the remainder in the position they enjoyed in 1939.

The unions, however, avoid putting their case on any such basis. Apparently, no one union has so far been willing to accept less in the way of an increase in cents per hour than any other. This being the case, although the unions criticize the use of average figures for the purpose of ascertaining the figure necessary to restore real wages, there appears to be no other way of considering the adequacy of present rates. If regard is not to be had to the individual rates, it is the average that must be considered.

The unions express some criticism also of the use of the present cost-of-living index on the ground that it is based on a fixed list of items established some years ago, since which time, it is contended, the scope of the average family budget has changed. The index, however, was established only as a means of measuring price changes and, at the time of the hearings, there was no other standard of measurement available for such purpose. Both parties before the Board have used it throughout.

It was to meet criticisms of this character that the new Consumers' Price Index was instituted, its first publication having occurred subsequent to the hearings. This new index covers a broader budget of items than the old index. It is perhaps worth while to set out the two indices on a comparative basis since September 1, 1950. The new consumer price index is based on 1949=100. The comparative table is as follows:—

Date	New Consumers' Price Index Base: 1949=100	Old C. of L. Index Base: 1949=100	Old C. of L. Index Base: 1935-39=100
Sept. 1, 1950	104·3	105·6	169·8
June 1, 1951	113·7	114·5	184·1
July 1, 1952	116·1	116·9	188·0
Aug. 1, 1952	116·0	116·7	187·6
Sept. 1, 1952	116·1	116·0	186·5

If one employ the new consumer price index for the purpose of measuring the spread between the wage rate and the cost of living (using that phrase in the popular sense), between September 1950 and September 1952, it will be found that the new index shows a rise of 11·3 per cent compared with 9·8 per cent when the old index is used. Applying the increase of 11·3 per cent to the existing rate of 129·3 cents per hour, an increase of 14·6 cents is called for, or 15 cents to the nearest cent. We think that the use of the new index is proper for this purpose rather than the old because of the fact that it is broader in the scope of items covered.

Checking the above calculation by increasing by the same percentage weekly earnings of $51.62 for the standard work week of 47·4 hours existing in August 1950, the weekly amount becomes $57.45, while actual earnings for the present 40 hour week are $51.72. The deficiency is $5.73 per week, or 14·3 cents per hour.

The unions have taken the point that the cost-of-living index does not include income tax and that wage deficiencies are "increased by the fact that the take-home pay of employees is greatly affected by the increase in income tax payments since 1939." The argument is that, as "corporation profits or corporation income is discussed in corporation reports mostly in terms of net earnings after payment of corporation tax," the "take-home pay" of the employee should be considered only after deduction of income tax payments. This argument is, in effect, a claim that railway employees are to be relieved of the payment of income tax in the form of increased wages. In our view, surely no one group in the community can make such a claim.

With respect to the point that the employees here concerned have not benefited proportionately with their fellows in the increase of Canadian prosperity since 1939, it is contended by the unions that the per capita disposable income of the Canadian citizen after payment of income tax had increased by 1950 approximately 50 per cent over and above the 1939 level. This does not appear to be so, however. In the consideration of this question it is necessary to recall that in the year 1939 there were some 523,000 unemployed persons, or some 11 per cent of the entire labour force. In addition there was a very substantial amount of unemployment on farms and elsewhere, which was not included in the unemployment statistics. Increases in national production was influenced by bringing into use these unemployed or under-employed persons, and the increased production would have to be spread over these additional workers as well as in bringing up the earnings of such workers to established levels. From 1939 to 1951 the number of people engaged on farms decreased by 30·6 per cent, while farm production increased from $458,000,000 to $1,167,000,000, an increase of $896 or 266·7 per cent per capita.

Again, the number of persons operating unincorporated businesses decreased in the

same period by 18·9 per cent, while the value of their production increased from $460,000,000 to $806,000,000 or 116·2 per cent on a per capita basis. Further, the number of people working for salaries and wages in industries other than agriculture in the same period increased by 77 per cent and the amount paid such persons increased from $2,480,000,000 to $4,783,000,000, an increase of 8·8 per cent per capita. Accordingly, it would appear that it is this last mentioned figure which represents the per capita increase in national production of the group to which the employees here in question belong. Looking at the situation with respect to the wage rates here in question, it appears that in 1939 the average hourly earnings of the non-operating railway employees were 57·9 cents, and in 1952, 70·5 cents, an increase of 21·8 per cent. All of the above dollar figures are in constant dollars.

Considerations of this character are, however, necessarily very general. A much more specific basis for the inquiry as to whether or not a given group in the community is receiving its due participation in the national income is furnished by a comparison of the return derived by such group for its labour with the return to other groups in the community whose working conditions can be said to be comparable. We shall postpone consideration of this aspect of the matter until a later stage. It is essentially bound up with the seventh of the heads of claim upon which the case for the employees is based.

In support of their fourth ground of claim, "the obligation of the employers to continue real wage increases which were interrupted during the war years," the unions point to the trend shown by the index of average steam railway real wages based on the index of wage rates published by the federal Department of Labour, which shows an increase of 1·99 per cent annually in the period 1913 to 1950. This rate of increase is compared with the Canadian general average of 2·7 per cent. The unions point out that in 1943 the index of real wages of steam railway employees stood at 171·2 as against the general average of 171·0. Since 1943 the general average had risen to 200·4 by April 1952, while the index for steam railways rose as high as 189·0 but had declined to 177·0 by that time. The inference which the unions seek to draw from these figures is that because steam railways show a lesser rise than the general average, therefore railway wages have not kept pace with the other industries included in the general Canadian average.

We do not think that such a conclusion is sound. Unless the relation existing between wage rates in 1939 is known, it is quite impossible to use the above indices to establish the proposition that a greater percentage rise in one industry than in another or others establishes a state of deficiency in those showing the lesser increase. An industry already paying a high rate in 1939 might well not show as great an increase by 1952 as an industry in which the rate paid in 1939 was low. To bring the point closer to the matter in hand, in 1939, according to the Annual Review of Employment and Payrolls issued by the Dominion Bureau of Statistics in 1951, the annual average of weekly wages and salaries for all manufacturing industries was $22.79, as compared with the figure for steam railways of $30.17. The increase in the case of all manufacturing to 1951 was $28.46, as compared with an increase for steam railways of $27.51. To speak of the result in percentages only, namely, 125 per cent for manufacturing as compared with 91 per cent for steam railways, does not give the proper perspective.

It would therefore appear that, far from being an industry in which earnings in 1939 were low, steam railways were well ahead of manufacturing industries as a whole.

The fifth ground upon which the wage claim is put is that of increased productivity and efficiency on the part of railway employees in the performance of their duties, which they say has "nearly doubled during the last twenty years." They estimate that the productivity of the Canadian labour force has risen 85 per cent since 1939, and claim that railway employees are no exception. No basis, however, upon which measurement of increased productivity in the case of railway employees can be made is suggested other than what is described as admittedly "a very rough approach." On the basis of freight tons carried as related to the total number of employees (654 tons per employee in 1939 as against 757 tons in 1950), an increase of 15·8 per cent over 1939 is shown. As the employees themselves say, however, employee productivity is in reality the productivity of the industry as a whole, and other factors than the efficiency of the individual worker are also responsible for any increase in productivity. The ability of a worker to produce is determined by the conditions under which he works, the character and capacity of tools, machines or equipment, the amount of power with which he is supplied; the effectiveness with which management

organizes and supervises his movements; his hours of labour; and his own competency.

The employees refer to the fact that the percentage of the total payroll of the Canadian Pacific Railway charged to operating expenses in 1951, which was, according to the annual reports, 7·4 per cent smaller than in 1939, as "proof of the tendency of payroll expenditure to decrease in proportion to total expenditure." This is not a deduction which can be made for the purpose stated, however, for the reason that, as pointed out by the railways, the figures to which the employees refer show that in 1939 the percentage of total payroll charged to total operating expenses in the case of the Canadian Pacific Railway was 61 per cent and in 1941, 55·35 per cent. Although the figures fluctuated between 1941 and 1945, reaching a low of 51·76 per cent in that year, thereafter the figures increase to 56·45 per cent in 1951. It is said by the railways that the major reason for the drop from 1939 to 1941 was the adoption of depreciation accounting in 1940, resulting thereafter in regular depreciation charges to operating expenses in place of retirement charges made only when equipment was actually retired from the company's books.

On the part of the railways, two bases are suggested for the purpose of measuring increased productivity, the first being on the basis of traffic units, namely, a combination of revenue ton miles and revenue passenger miles, weighted according to the formula adopted by the Inter-State Commerce Commission of the United States. The second basis suggested is gross ton miles in the case of freight service. Similar figures in passenger service are not available. On the first basis of traffic units per man hour, the increase from 1939 to 1950 is 17 per cent, while the increase on the second basis of gross ton miles per man hour, is 12·1 per cent. The railways explain the difference between the two as being related to the very large increase in passenger business during and since the war. It is said that variations in passenger business can be handled with much less change in man hours worked than is the case with variations in freight business. However this may be, these figures do show a substantial increase.

The quotation from the employees' statement referred to above is, however, again applicable, namely, that the increase is attributable to all the factors in the industry. While the employees in the railway industry, as in any other industry, should be entitled to share with management and the public generally in productivity gains, there is no way of showing that, in view of the increase in real wages since 1939, they have not done so.

Coming to the sixth head of claim, the demand for an increase of 45 cents per hour for each and every employee, an increase on the average of 35 per cent, is to place the non-operating employee on the same wage scale as that which prevails on United States railways. As put by the employees, this demand is based on the "principle of equal pay for equal work," which is a reasonable and understandable principle where governing conditions are the same. For example, two men equally qualified, doing the same work in the same shop may reasonably expect to be remunerated on the same basis, and the same is no doubt true throughout a given locality. The evidence before the Board indicates, however, that this is a principle which is not always applied in fact throughout the length and breadth of this country where the going rates in urban centres may differ from those current in the same trades in less populous places. The same is true as between different geographical sections of the country.

In considering the question as to the adequacy or inadequacy of any particular wage rate or set of rates, some standard of measurement is necessary, and if the governing conditions were the same or reasonably similar, the standard furnished by the wage scale paid to American railway employees would no doubt constitute a standard by which the scale of wages paid to Canadian railway employees might well be judged. The question is as to whether or not the governing circumstances in the two countries are comparable.

The employees point out in the first place that, commencing in 1918 and for some years thereafter, equality as between the two countries did exist in that the scale of wages fixed by the McAdoo award in the United States was by Order in Council of the Government of Canada applied to all railway lines in Canada. The situation thus brought about arising out of conditions due to the war of 1914-1918 continued until 1922, and during this period both wages and freight rates in Canada followed a course generally similar to that obtaining in the United States, although the level of Canadian freight rates did not quite attain that in the United States. Since 1922 the history of wage and freight rate changes in the two countries has diverged. Without going into the matter in detail, it is sufficient to say that

after 1922 freight rates advanced in the United States, and since June 30, 1946, have amounted to an effective advance of 78·9 per cent. In the same period wage rate increases on United States railways have borne a close relationship to increases in freight rates.

On the other hand, from 1922 to 1948 there was no change in general freight rates in Canada although there were changes in individual rates made necessary by local conditions. Between 1941 and 1943 wages were increased by the wartime cost-of-living bonus which was followed by wage increases in 1944 and 1946, with the inclusion of the cost-of-living bonus in the basic rates in 1944. These were again followed by an increase of 17 cents per hour in 1948 and a further increase of 7 cents on August 31, 1950, with a reduction in working hours from 48 to 40 becoming effective June 1, 1951. Increased freight rates were also authorized in 1949, 1950 and 1952.

The employees point out that the Canadian railways now pay to the American employees of roads owned by them in the United States the American scale of rates, and further, that United States railroads operating in Canada pay their Canadian employees on the American scale. The employees also allege that certain Canadian steel companies have put into effect in their plants wage scales current in the steel industry in the United States. The unions take the position expressly that railway "revenues do not enter into wage determination," and that "railway freights and revenue are of no concern to" this Board. That is to say in effect, as we understand it, that the question as to whether or not the railways can obtain freight and passenger rates which would permit them to pay wages on the American scale is a matter to which this Board should pay no attention in passing on the claim for payment to these employees of a wage rate commensurate with the American scale. While a conciliation board, it is true, has nothing to do with the fixing of freight or passenger rates, it can scarcely be claimed that this Board should accept the mere fact of the payment by the American railways of a certain wage scale as conclusive of the propriety of the claim to payment of the same scale by Canadian railways.

When one comes to consider the per capita gross national product in Canada and the United States over any relevant period such as from 1946 to 1951, one finds that while the Canadian figure in the first of the years mentioned was $931 and rose in the last mentioned year to $1,440, the corresponding American figures were $1,509 and $2,123. All these figures are in American dollars. The Canadian economy is one based on the exchange of a number of primary or semi-processed products as against the importation of a large number of products produced outside the country. In 1951 the relationship of exports to gross national product was 18·4 per cent, whereas in the United States the corresponding figure was 4·6 per cent. Accordingly, to a much greater extent than is the case with the United States, Canadian prices are determined in a world market and not internally. The smaller domestic market for many of its products, together with the greater dependence on outside markets for the disposal of so much of its product, creates of itself a fundamental difference in the economy of Canada when compared with the United States, and provides an explanation for the higher level of wages in the latter country.

The unions point to the prosperity of the Canadian pulp and paper industry in support of their proposition that wage levels do not enter into "export possibilities" of Canadian products. That industry, however, is not free from the influence of world competition as was seen during the 1930's when it was depressed. The natural advantages of the industry in the way of supply and accessibility of raw materials and power may well help to explain its current prosperity and ability to pay wages which approach the American scale. In the month of March 1952, for example, the average hourly earnings of employees in the pulp and paper industry in Canada were approximately 10·4 per cent below the United States figure. The tobacco industry in Canada provides a similar illustration. The wage level in both countries in March 1952 was practically the same.

However, if one compared the corresponding figures for all manufacturing in Canada and the United States at the period mentioned, the American figure was some 28·3 per cent higher than the Canadian: the durable goods industry was 24·9 per cent higher; shipbuilding and repairing 40·5 per cent; automobile 21·4 per cent; electrical apparatus and supplies 21·9 per cent; machinery manufacturing 35·9 per cent; agricultural implements 18·7 per cent; transportation equipment 31·6 per cent; non-ferrous metals smelting and refining 12·3 per cent; chemical and allied products 27·9 per cent; rubber products

33·5 per cent; and coal mining 48·9 per cent—to give some examples only. It would appear that the governing conditions surrounding the various industries mentioned must be essentially different in the two countries.

Information furnished by the railways based on data applicable to the year 1951 shows that the population of Canada per mile of railroad was 328 as against the United States figure of 662, and that the relevant figure for eastern Canada was 527 as against 1,043 in the case of territory served by the New York Central Railroad and 1,106 in the case of territory served by the Pennsylvania Railroad. In western Canada the corresponding figure was 161 as against 367 in the case of territory served by the Chicago, Burlington and Quincy Railroad, the Great Northern and Northern Pacific Railroads. None of the named American railroads is a transcontinental railway as is the case with the Canadian National and Canadian Pacific Railways, but the American railways mentioned serve as a convenient example with respect to the situation in eastern and western Canada respectively.

Again the higher density of population in the United States as compared with Canada is reflected in the following figures:—

—	Revenue Frt Ton Miles per Mile of Road (000)	Passenger Miles per Mile of Road (000)	Operating Revenues per Mile of Road
			$
Canadian Railways	1,479	71	24,911
Canadian National (Lines in Canada)	1,427	67	24,312
Canadian Pacific Ry.	1,577	79	25,217
U.S. Class 1 Roads	2,862	153	45,994
Canadian National (Eastern Lines)	1,711	101	33,866
Canadian Pacific (Eastern Lines)	1,991	139	38,523
New York Central R.R.	3,813	377	75,233
Pennsylvania R.R.	5,414	478	103,139
Canadian National (Western Lines)	1,144	33	14,817
Canadian Pacific (Western Lines)	1,365	48	18,393
Chicago, Burlington & Quincy R.R.	2,111	94	30,212
Great Northern Ry.	2,168	71	29,827
Northern Pacific Ry.	1,716	48	25,228

Comparative revenue figures per mile of road in Canada and the United States in the period 1946 to 1951 show the following:—

Year	Freight Revenue per Mile of Road			
	All Canadian Railways	Canadian Nat'l. (Lines in Canada)	Canadian Pacific	U.S. Class 1 Roads
1946	12,558	11,904	12,769	25,406
1947	14,365	13,309	14,668	30,89[illegible]
1948	16,516	15,301	16,785	35,153
1949	16,504	15,484*	17,150	31,112
1950	17,895	16,859	17,983	34,544
1951	20,039	19,132	20,662	38,219
	Total Operating Revenues per Mile of Road			
1946	16,967	16,177	17,289	33,489
1947	18,556	17,364	18,857	38,104
1948	20,702	19,447	20,857	42,625
1949	20,866	19,844*	21,329	37,874
1950	22,311	21,268	22,244	41,862
1951	24,911	24,312	25,217	45,994

*Excluding Newfoundland district.

When one comes to consider the traffic handled per employee on railways in the two countries in the same period as above, the situation is as follows:—

—	Operating Revenues per Employee					
	1946	1947	1948	1949	1950	1951
	$	$	$	$	$	$
All Canadian Rys.	4,415	4,723	5,125	5,167	5,602	5,710
U.S. Class 1 Roads	5,612	6,424	7,291	7,198	7,762	8,144

The situation disclosed by the last mentioned figures is reflected in the relation of operating revenues to each dollar paid in wages given for the same period:—

OPERATING REVENUES RELATED TO EACH DOLLAR PAID IN WAGES 1946-51

Year	All Canadian Railways	Class 1 Railroads in the U.S.
	$	$
1946	1.99	1.92
1947	2.00	2.10
1948	1.89	2.13
1949	1.89	2.05
1950	2.01	2.16
1951	1.94	2.07

*Estimated

It will be observed that in the case of the Canadian railways each dollar spent in wages in the year 1951 produced less revenue than had been the case in 1946, notwithstanding the increases in freight rates in the interim.

The railways also point out that the Canadian railways labour under a further disadvantage with respect to American railroads in the generally higher cost of equipment, materials and supplies in Canada, and they state that, with respect to nine items which the railways were obliged to purchase in 1951, the cost to the Canadian railways exceeded by approximately $50,000,000 the cost of the same articles in the United States. The railways admit, however, that with respect to such items as ties and lumber, they enjoyed an advantage over American railroads in the same year to the extent of $1,650,000, but they say that with this exception and that of steel tires, costs to the Canadian railways of necessary supplies are in excess of the prices for which the American railways are able to purchase the same commodities, the percentage ranging from 6·5 for brake shoes to 61·7 for rolled steel wheels, while coal, the largest single item of consumption, shows an excess of 53·8 per cent. The result of the differing situations in the two countries is illustrated in the following table:—

OPERATING RATIOS OF RAILWAYS IN CANADA AND THE U.S.

Year	All Canadian Railways	U.S. Class 1 Roads	Can. Nat. (in Can.)	Canadian Pacific
1946	86·8	83·3	88·2	86·5
1947	88·0	78·3	91·9	87·0
1948	92·3	77·3	96·6	91·8
1949	92·6	80·3	96·9	91·9
1950	86·9	74·5	91·1	85·5
1951	89·9	77·4	94·4	88·9

The present request of the employees would involve a cost to the railways of $158,370,210. The total net operating income of the Canadian National and Canadian Pacific Railways in 1951 was $48,600,000.

There would appear, therefore, to be nothing in the above review of the Canadian economy as opposed to that of the United States to suggest that the railways industry in Canada should be able to operate on the same basis as the industry in the United States, from the standpoint of wage scales.

While at first glance, therefore, the American railway industry might seem to offer a reasonable standard by which the Canadian railway wage rate could be measured, the validity of any such comparison disappears on analysis. Governing conditions are not the same or reasonably similar, and accordingly, some other standard of measurement must be looked for.

In connection with the seventh head under which the unions state their claim, namely, "the deterioration of the economic position of the Canadian railway employees in relation to other Canadian wage earners," they state that

> During the last two decades a great change has taken place in the economic position of the railway employees within the general Canadian wage structure. Some decades ago the special skill, the great amount of responsibility and hazards connected with railway work received their proper financial recognition. Slowly the railway worker has lost all his gains. His remuneration has fallen below earn-

ings in other industries and his wage increases are smaller than those obtained by other workers in Canada.

We have considered this statement with respect only to the non-operating railway workers who are the concern of this inquiry. They look back to a time when their earnings were in excess of other industrial groups in the community. The present request is for the restoration of former conditions, but the point of view set forth in the paragraph quoted above does not inquire into the reason for the fact to which attention is drawn, namely, that "other workers in Canada" during the last two decades have received greater wage increases than the railway workers. In so far as the non-railway groups are called upon to exercise comparable skills and to measure up to comparable responsibilities, there would not appear to have been or to be any valid reason why the one should ever have had or should now receive more in the way of remuneration than the other. It surely cannot be a valid reason for now paying greater remuneration to the railway group, simply that its remuneration has been in fact greater than other groups in the past. It seems to us that if the non-operating railway employees receive or should be placed on a basis of comparable remuneration for comparable work vis-a-vis other groups in the community, the case of the railway worker cannot, in justice to the other groups or to the community as a whole, be put on any higher basis.

In elaboration of their point of view, the unions refer again to the increase in the index of the general average of wage rates of all industries in Canada between 1913 and 1952 in comparison with the history of the index of steam railway rates. It is sought to be contended on the basis of these figures that the wages of the railway workers have "lagged behind" those in other industries by some 53 per cent.

More specific comparisons are made between the increases since 1913 in certain named industries and the increases in the case of steam railways, and a similar comparison is made with respect to the period since 1939. For example, it is pointed out that in April 1952 the index of wage rates in the case of the logging industry stood at 251·3 over 1939, mining 232·5, manufacturing 266·2, construction 219·0, transportation and communication 218·7, laundries 237·2; while in the case of steam railways it was, as already stated, 207·4.

We have already pointed out the unsoundness of this argument and it is not necessary to repeat that discussion.

In the inquiry as to a standard furnished by industry outside the railway industry with which wage rates in the railway industry may be justly compared, it is obvious, as already indicated, that the criteria of comparison should include as far as is reasonably possible, such matters as similarity of work and working conditions, similarity in the proportions of male and female employees and skilled, semi-skilled and unskilled workers, as well as wide territorial distribution and regularity of employment.

With respect to the last mentioned, the parties are agreed that railway employment offers a high degree of security. The unions in their written statement say "Work on the railways becomes a family tradition, the son proudly follows his father in the same employment, the daughter works in the offices of the same company, and brothers and sons-in-law continue the family tradition." It is also said that "railway service is a lifetime career." The fact that such statements can be made indicates that in the past, at least, most railway occupations have offered stability of employment.

Railway occupations cover a wide range, from that of the skilled craftsman to the unskilled labourer, and the distribution of the employees is across the entire country, in areas where industry is concentrated and where wages generally are high, as well as in less concentrated or agricultural areas where rates are lower. For a majority of railway occupations, rates of pay, also, are uniform across the country, and where differences still exist, these are rather between eastern and western Canada than between larger and smaller geographical areas. The railway wage structure has been developed by collective bargaining over a long period of time and recognized relationships have been established between rates of pay for various occupations. As a result, the adjustment of any particular rate may be impossible without changing the rates of a number of occupations which may already compare favourably with rates paid generally in outside industry.

Again, the railways, by agreement with their employees, have, with respect to the mechanical trades, established one uniform rate for the fully-qualified craftsman rather than different rates for each trade, and less provision is made in the railway wage structure for grading craftsmen in different classes than is the practice in

outside industry. Accordingly, if the adequacy or inadequacy of each several wage rate within the railway wage structure is not to be tested by comparable particular rates in outside industry in the same area of the country (and the unions reject this approach), it is obvious that it cannot be said that the railway wage structure as a whole is inadequate because a particular wage rate in a particular area may be found to be deficient when compared with the rate paid for the same occupation in outside industry. The search for a standard of comparison of the non-operating railway employees as a whole must be answered by one which will furnish the same or similar diversity of occupation and wide-spread distribution throughout the country, as well as the other matters to which we have already referred.

In the arbitration under the Maintenance of Railway Operation Act, 1950, it was thought by the arbitrator that a proper standard of comparison was furnished by the durable goods industry, which comprises the following industries: Wood Products, Iron and Steel Products, Transportation Equipment, Non-ferrous Metal Products, Electrical Apparatus and Supplies, and Non-metallic Mineral Products.

The group of industries comprising durable goods includes the major heavy industries, particularly those based on iron and steel and the manufacture of equipment. It has a relatively low proportion of women workers and from this standpoint gives a comparison in keeping with the composition of the non-operating railway group which is largely male, except for office workers. Of approximately 143,000 non-operating railway workers, approximately 7 per cent are female. In the durable goods industry the corresponding figure is 10 per cent, although in the electrical goods industry, for example, female employees make up 28 per cent of the whole. The average earnings of durable goods employees have been consistently higher than non-durable goods, and higher also than the average of all manufacturing industries. While the present inquiry is concerned with the adequacy or inadequacy of "rates," the use of earnings for purposes of comparison is valid provided earnings are not distorted in the one case or the other by items not common to both.

Criticism of the validity of the comparison of railway earnings with earnings in the durable goods industry is made by the unions on the basis that in the former, salaried personnel are included, while in the latter, only hourly rated employees are included. It is said that the salaried railway personnel included in the railway figures are generally more highly paid than employees who are paid on an hourly basis. As put by the employees in their written statement:—

> The average earnings figures of railway employees are *brought up* by the addition of salaried employees, while the exclusion of salaried personnel in DBS statistics of durable goods industries brings the average figure *down*. The railways have also included in the average figure certain groups of clerks whose pay is *above* and outside the collective agreements.

The italicizing is ours.

This statement, however, involves a misconception, as the earnings figures in the case of the railway employees to which reference will be made does not in fact include the higher salaried employees at all. The salaried employees whose earnings are included in the railway figures have a lower average earning than the rest of their fellows among the non-operating employees. Accordingly, the inclusion of these salaried employees does not affect the railway figure in the way the employees contend, but, if anything, has a contrary effect. The situation in the durable goods industry appears to furnish an exact parallel in this respect in that, for example, in the figures for the week ending October 31, 1951 (a period when a particular study of the matter was made by the Dominion Bureau of Statistics), the average weekly earnings of office workers was $54.16 as against $56.36 for hourly rated employees. It is to the earnings of the hourly rated employees only that we refer for purposes of comparison.

It may be pointed out here also that the durable goods figures include what are known as "shift differentials," and that the figures are to that extent enhanced.

The use of the durable goods industry as a basis of comparison is also criticized by the employees on the ground that it includes the wood products industry. It is said that furniture making and work in saw and planing mills or in the making of miscellaneous wood products where semi-skilled or unskilled workers are employed and where the work is to some degree seasonal, renders the comparison inappropriate.

It is to be noted, however, that the railways themselves operate planing mills, the lumber being used in the construction and repair of railway freight cars, and the railways claim that they pay higher rates for this work than is paid in saw and planing mills generally.

The employees make a similar objection based on the inclusion in durable goods of the non-metallic minerals industry, which is composed of the clay products and glass products industries. The employees in this industry are, however, a comparatively small group, comprising in August 1952 some 20,000 out of a total of some 430,000 durable goods employees, and the average weekly earnings in the non-metallic minerals industry in August 1952 were $57.19, and in the durable goods industry as a whole, $57.43.

Objection is again made on the ground of the inclusion in durable goods of the electrical apparatus and supplies industry, for the reason that it is composed of 28 per cent female workers while there are only 7 per cent female employees among the railway group. However, the over-all percentage of female employees in the durable goods industry is 10 per cent. Moreover, the average hourly rate in electrical goods as at July 1, 1952, was higher than the average for the durable goods industry as a whole. Accordingly, the inclusion of electrical goods has an enhancing rather than a lowering effect on the durable goods figures.

Reference is also made by the employees to the award of 1950 in which the arbitrator made comment with respect to "motor vehicles, parts and accessories" which is one of the groups included in the transportation equipment industry. It is apparent, however, that in that comment, the arbitrator was dealing with a contention that railway earnings should be compared with earnings in the motor vehicles, parts and accessories industry alone, a suggestion not advanced in the present inquiry.

The employees also point to the fact that the transportation equipment industry (part of the durable goods group), includes "railroad and rolling stock equipment" which includes some non-operating railway employees. It is therefore said that, to the extent of this inclusion, the comparison is really a comparison of the same thing with itself.

In August 1952 the average weekly earnings of the transportation equipment worker were $58.85, while, as already mentioned, the corresponding figure for durable goods as a whole was $57.43. If one were to exclude the workers employed by the railway companies, the figure $58.85 would become $60.68, and the corresponding figure for durable goods would become $57.81 instead of $57.43. This is not an appreciable change.

It would not constitute a valid comparison for present purposes to compare non-operating railway workers with workers in any one of the industries comprising the durable goods group, and it is not proposed to do so. The proposed comparison is between non-operating railway workers and workers in the durable goods industry as a whole. In our opinion, such a comparison is a valid one. The durable goods industry, like the non-operating railway industry, is composed of skilled, semi-skilled and unskilled workers. While it is undoubtedly true that in some of the industries making up the durable goods group the proportions of skilled, semi-skilled and unskilled workers are different from the proportions in the case of the non-operating railway group, nevertheless, when the comparison is with the durable goods group as a whole, the proportions on balance do not appear to be greatly different. For this reason the inclusion of the industries objected to as above would appear valid. Furthermore, wood products and non-metallic minerals—more especially wood products—have the added advantage of wide geographic distribution not shared to the same extent by the other industries in the durable goods group. No other group of workers in the Canadian economy furnishes, in the opinion of the Board, a comparison which answers all the requirements as well as the durable goods industry. It may be observed that a Presidential board in the United States in 1948 also considered the comparison of durable goods to non-operating railway employees a proper one.

It is not without interest to observe the relation which has obtained in the United States in recent years between average hourly earnings in the durable goods industry and in the case of the non-operating railway employees, as well as with that prevailing in the manufacturing industry as a whole.

The following are the figures from 1946 to July 1952:—

TRENDS IN AVERAGE HOURLY EARNINGS OF NON-OPERATING RAILWAY EMPLOYEES AND EMPLOYEES IN DURABLE GOODS AND ALL MANUFACTURING IN THE UNITED STATES 1946 TO 1952

—	1946	1947	1948	1949	1950	1951	1952*
Non-operating employees	1.037†	1·100	1·224	1·501‡	1·511	1·683	1·747
Durable Goods	1·156	1·292	1·410	1·469	1·537	1·678	1·734°
All Manufacturing	1·086	1·237	1·350	1·401	1·465	1·594	1·649°

*July 1952.

†The non-operating employees in the United States went on a 40-hour week effective September 1, 1949. Non-operating employees used in the table cover 73 classes.

‡September 1949.

°Preliminary.

SOURCE: *Report to the President by Emergency Board,* appointed February 24, 1950, pursuant to sec. 10 of Railway Labor Act. No. 81, table 2, p. 35;

Hours and Earnings, Bureau of Labor Statistics, Washington and current data received from Railroad and Airline Wage Board, Washington.

From a somewhat inferior position in 1946, the non-operating railway worker in the United States has since attained parity with the worker in the durable goods industry. This fact would seem to be additional evidence that the comparison we propose to make in the present instance is not an unreasonable one.

On September 1, 1950, the average hourly earnings of the durable goods worker were 112·9 cents, the average hours worked per week were 41·5, and the average weekly earnings $46.85. On the same date the average hourly rate of the non-operating railway employee was 108·9 cents, the average hours worked 47·1 per week, and the average weekly earnings $51.29. On June 1, 1951, on which date the standard work week of the railway worker was reduced to 40 hours, the average hourly earnings of the durable goods worker had risen to 123·8 cents, while average weekly earnings were $52.12, average hours worked being 42·1. By August 1, 1952, the situation had become:—

—	Average Hourly Rate	Average Weekly Hours Worked	Average Weekly Earnings
Durable Goods	139·4	41·2	$ 57.43
Railways	130	41	54.30

The railway rate had, accordingly, by that date, fallen below the durable goods rate by 9·4 cents, but the offer of the railways of an increase of 7 per cent, which is equivalent of 9 cents per hour, would have equalized matters.

We think there is another element, however, which properly calls for consideration at this point. The railways placed in evidence a chart showing, on a quarterly basis, the average hourly earnings in durable goods since February 1945, as well as the average hourly earnings of the non-operating railway employees between major wage changes over the same period. In the railways' brief, in reference to this chart, the following paragraphs appear:—

120. It will be observed that prior to June 1, 1946, railway employees and Durable Goods Manufacturing were at approximately the same level. The effect of the wage increase of 10 cents per hour granted railway employees from June 1, 1946, was to push their wage rates substantially above Durable Goods. They were, however, overtaken during 1947 after wages had been freed of all controls. The increase of 17 cents per hour effective March 1, 1948, again established railway earnings above Durable Goods, but the subsequent rise in the latter eliminated this advantage. The increase of 7 cents per hour effective August 31, 1950, did not quite bring railway earnings up to Durable Goods, but the conversion to the 40-hour week June 1, 1951, pushed them above the level then current.

121. At the present time average hourly earnings of railway employees of $1.30 per hour compare with average hourly earnings for Durable Goods of $1·396 at June 1, 1952. The offer made by the railways of an increase of 7 per cent, which would average just over 9 cents per hour, was based largely on a comparison with the last figure then available for Durable Goods of $1·396 as at April 1, 1952. The effect of this offer would have been to bring hourly

earnings of non-operating employees practically in line with those of Durable Goods.

Since June 1, the figures in the durable goods industry have been as follows:—

	Hours	Cents per Hour
July	41·4	138·3
August	41·2	139·4
September	41·8	141·1

Since 1950, the upward movement in the durable goods industry has been at a fairly rapid rate. In December of that year, average hourly earnings were 116·4 cents. A year later the figure had become 134·6 cents. While in 1952, although the rate of increase declined, the trend continued upward from 136·4 cents in January to 141·1 cents in September. Further, there have been, during the past summer, a number of wage adjustments effected in substantial segments of the durable goods industry, and some of these have contained retroactive clauses. The effect of these agreements has not been, as yet, fully reflected in the published figures. For this reason, as well as for the reason that there will doubtless be further bargaining in the industry during the period to be covered by the railway contracts, we think it likely that further upward revision of the monthly figures may occur. There is the further known fact that in some of the wage settlements made this year provision has been made for deferred increases to become operative later this year and in 1953.

In view of the manner in which the paths of earnings in the durable goods industry and in that of the non-operating railway employees have, as the railways' chart shows, crossed and re-crossed in the past, and the likelihood of some continued upward movement in the former, we think it reasonable, in setting the increase for the non-operating railway employees with reference to the standard afforded by the durable goods industry, to give effect to the considerations just reviewed in order that earnings in the railway industry may be kept in touch with earnings in durable goods.

With these matters in mind and having regard to the increase required to maintain real wages since September 1, 1950, we think that an increase on the basis of sixteen cents per hour (leaving to one side for the moment the question as to a percentage or straight cents per hour increase "across the board") would be fair and reasonable for the purposes of the contracts now to be renewed. We think that this gives fullest effect to all the factors upon which the claim for increase has been or can be reasonably based. In using, as we have done, the durable goods industry as a basis of comparison, fullest effect will also be given to the unions' claim for "improvement". The proposed increase will, of course, for the present at least, place the railway worker in a more favourable position than the durable goods worker, but our proposal anticipates that the margin between the two will again close.

At first sight, the question might arise as to why the principle we have applied in assessing the increase required to maintain, as at September 1, 1952, the wage rate level established on September 1, 1950, in terms of constant dollars, should not also be applied in assessing the amount required to maintain the relationship between railway earnings and durable goods earnings over the same period. In other words, it might be suggested that if the percentage increase in the consumers' price index is to be applied to the railway rate established on September 1, 1950, to determine the rate which should obtain two years later, should not the percentage increase in the durable goods rate in the same period be applied to the 1950 railway rate to produce the proper 1952 rate.

The answer, in our opinion, is that employment of the consumers' price index is for the purpose of maintaining the level of wages throughout the period in terms of constant dollars, while the use of the standard afforded by earnings in the durable goods industry is for the purpose of maintaining railway wages, as nearly as may be, at the same level as earnings in durable goods, but the employment of that standard is not to maintain whatever accidental difference between the two may exist on any particular date, whether such difference should be in favour of the one or the other.

The employees have pointed out that the figures with respect to the durable goods worker do not include the value of such items as group insurance, sickness and accident insurance, hospital and medical aid, holidays with pay, and pensions, which obtain in the case of many industrial employees, and that is so. The railways also have, and have had for many years, pension plans, vacations with pay, and, something which is unique in the case of the railways, pass privileges in favour

of employees and their families. The railways do not have, however, the other benefits mentioned above. From this fact, the argument on the part of the employees is that there should be a corresponding increase in the wage scale of the railway employee to compensate for items lacking. In our opinion, however, the matter cannot be so dealt with. We think the only proper way is that benefits such as are above mentioned should be negotiated as such, and not included in the wage rate itself. As there has been no claim for any of these benefits as such, it is not possible to deal with the matter on the basis put forth.

Percentage vs. Cents per Hour

The present demand by the unions has been for an increase in the form of an equal amount in cents per hour to every employee. This is rested by them upon the nature of the basic wage structure and the interrelationship of the various rates of which it is composed. They contend that as a result of the unemployment which prevailed in 1939, the unskilled worker then had to accept a wage which was not related to the real value of his service. It is said that with the passing away of unemployment and the growth of competition in the labour market, the tendency was to reduce or eliminate what the unions regard as excessive wage differentials which had developed in less prosperous times. They point out that had all increases in the past been by way of percentage rather than by way of straight increases in cents per hour "across the board," the effect would have been to increase enormously the differentials established in slack times. Accordingly, they ask that any increase at the present time should again take the form of an equal amount in cents per hour to all workers.

The railways do not contend that all increases should invariably be on a percentage basis. They do say that, while all increases since 1939 have been on a cents per hour basis, at the present time it is important that in any increase to be granted that practice should not be continued.

The railways point out that during the late war, a cost-of-living bonus was instituted based on a weekly amount designed to protect the basic living standards of wage earners receiving not more than 50 cents per hour in 1939, it being considered that those receiving in excess of that amount could fairly be required to absorb some of the increase in living costs in a time of national emergency. Following the war, the National War Labour Board continued to authorize increases of a uniform amount per hour, a policy designed to protect basic living standards and at the same time to require those receiving more than the basic wage to absorb some portion of the increasing costs, thus limiting the inflationary effects involved in the war effort.

In the contention of the railways, this policy was governed by short-term conditions arising out of the war and the effects of the war, and they point to the resulting effects upon wage relationships as between various classifications of railway employees. For example, in 1939 a machinist's helper received 70·9 per cent of the rate payable to a fully-qualified machinist, whereas in 1952 this rate had advanced to 82 per cent. Again, an unclassified labourer in 1939 received 50·6 per cent of the machinist's rate, but in 1952 70·3 per cent, while the minimum clerical rate in 1939 was 54·4 per cent of the machinist's rate and in 1952 72·3 per cent. The result was that while the machinist's rate over the period increased by 94 per cent, a number of other rates increased all the way from 113·4 per cent to 244·9 per cent.

The railways have submitted evidence to show that up to the present time the effect of the uniform increases in cents per hour has not been to throw rates of pay of certain individual categories in railway service seriously out of line with rates payable in outside industry, but that a situation has now been reached where the rates paid to the skilled employee in relation to those paid to the less skilled are beginning to render the former unattractive and not worth the effort involved in qualifying for the higher rate. In the brief filed by the employees, the paragraph already referred to, in which reference is made to the fact that railway service is a lifetime career, contains this further statement:—

> It is therefore most important that the financial prospects should be attractive, both for the entrant and for those already in the industry. At present, however, new skilled labourers are not attracted to the industry.

It is true that this paragraph relates to the employees' contention that all railway wages are low when compared with that which ought to prevail, but the statement quoted agrees significantly with the situation as seen by the railways and rather

points to a conclusion that the differentials between skilled and unskilled rates ought not, at present at least, to be further narrowed.

These considerations and the fact that real wages have been impaired by 11·3 per cent since September 1950, would justify making the entire increase we propose in the form of a percentage, but we think that the change from the practice of former years might well not be made in one step. We therefore recommend that existing rates be increased by 7 per cent plus seven cents (the equivalent of 16·05 cents).

Escalator Clause

The demand for the inclusion of an "escalator" or cost-of-living clause in the new agreement has for its background the history of a climbing cost-of-living index since 1939 and its effect upon each wage increase almost immediately after the same had been negotiated. The employees refer also to the fact of the inclusion of such a provision in wage agreements in outside industry in Canada in the past few years. In particular, they refer to what might be called a sample of such agreements received by the Department of Labour during the first eight months of 1951. Approximately one-fifth in number of these agreements covering 40 per cent of the 374,000 workers involved included some such clause. The employees also point to the fact that as of March 1, 1951, a clause of this character has been included in the agreements reached by the eastern railroads in the United States, which railroads include the American branches of the Canadian National and Canadian Pacific Railways.

While it is true that the cost-of-living index in Canada advanced from January 1939 to January 1952 to a level of 191·5 points, since the last mentioned date, however, the index has fallen to 186·5 on September 1, 1952, and to 185 on October 1. The corresponding figure for the consumers' price index is 116. As to the agreement made by the American railroads in 1951, it is to be observed that the term of that agreement was from March 1, 1951, to October 1, 1955, while the agreements here under consideration are for one year only, of which something less than 10 months is at this date left to run. It would seem, therefore, that a clause of this character is inappropriate in a short-term agreement at such a time as the present when the trend of living is downwards.

Union Shop and Check-off

In connection with this demand, the employees point out that in 1952 the Carriers Conference of the eastern United States railways concluded an agreement with fifteen of the seventeen unions who are before this Board, providing for a form of union shop and check-off of union dues, and that the Canadian National and Canadian Pacific Railways are parties to this agreement with respect to their branch lines in the eastern United States. It appears that the railroads in other parts of the United States have not as yet such a provision in their agreements with their employees.

The employees here concerned also point to the provisions of Section 10 of the Industrial Relations and Disputes Investigation Act, under which the certified bargaining agent bargains collectively on behalf of all the employees, and that thus the working conditions of non-union as well as union members are affected by the agreements so brought about. The unions complain that employees who do not become union members, in effect, take the benefits flowing from the collective bargaining conducted by the unions, without sharing the cost, and that the only source of funds with which the unions may carry on these activities is membership dues.

With respect to the check-off, the unions point out that the railways already deduct a large number of items from each individual pay-cheque covering a variety of matters, and that, therefore, the deduction of union dues should not be a matter which can be reasonably objected to. They point also to a trend in industry toward some form of union shop and check-off, and indeed the railways admit that there is a trend in that direction. The unions also contend that under Section 6 (1) of the statute already referred to, Parliament has authorized the inclusion in collective agreements of a union shop clause. It is contended that this section expresses public policy on the matter and that a board such as this Board ought not to do otherwise than report in favour of this demand.

In answer to these contentions the railways refer to the fact that under the union shop provision here in question, willingness on the part of an applicant for employment with the railways to become a member of one of the unions here concerned would become a prerequisite to employment, and refusal to join would automatically involve discharge, regardless of the length of service or the fitness of the employee to perform the duties of his employment. It

should perhaps be said that the unions' proposal is not merely to affect employees hereafter entering the railways' employ, but all existing employees as well.

The railways say that under existing agreements with the unions, the latter have the right to make a grievance of the discharge by the railways of any employee, which grievance then becomes the subject of review under the appropriate machinery provided by the collective agreements. Under a union shop clause, however, the discharge of an employee, once he has been deprived of his membership under the provisions provided by the constitution of the unions themselves, is automatically required of the railways without any right of review in which the railways have any part. Thus there is a lack of mutuality in the two provisions.

The railways also contend that from the standpoint of the employee, the latter, under a union shop agreement, would lose his present right of protest by resigning from the union in the event of disagreement on his part with the policy adopted by the majority on any question, as resignation from the union would involve discharge from his employment.

The railways emphasize the loss of freedom of the person and the substitution of compulsion which would be involved in acceptance on their part of the union shop, and they are unwilling, not only from their own standpoint but as well from that of their employees, to agree to such a provision. The railways agree that, in the interests of good labour relations, unionism among their employees should be strong and stable, but in their view, unions remain thus by so acting that the employees will become and will remain members of the union as a result of a conviction that their interests are being served by membership in a union, and that the union itself will be a better instrument of service to the employee if it has to depend upon demonstrating its service rather than upon compulsion. The railways contend that the existence of the so-called "free-rider" is a lesser evil than the loss of personal freedom which would inevitably follow adoption of the union ship. They cite specific instances of long term employees, who declined for reasons of their own to become union members, who had to be discharged for that reason, upon the institution in other industries of the union shop.

Like the unions, the railways point to the Industrial Relations and Disputes Investigation Act, but draw a different conclusion as to the public policy therein laid down. They point to Section 3 which preserves to every employee the right to membership in any trade union, and to Section 4 (2) (b) under which the employer is prohibited from imposing any condition in a contract of employment which seeks to restrain an employee from exercising his rights under the statute. They accordingly contend that as Section 6 (1) operates only with the consent of the employer, in the absence of such consent, the policy of the statute is to leave the employer complete freedom of choice in the matter.

If our appreciation of the fundamental basis of the desire for the union shop be correct, it is the sense of injury cherished by the union member toward those who stand outside the membership but who, nonetheless, along with the union member, reap the benefits unavoidably accruing to all employees from the activities of the union, without in any way contributing to the expense involved in the maintenance of the union. Such a sentiment is natural and understandable. At the same time we find it difficult to believe that of the 143,000 non-operating railway employees, some 10,000 to 15,000 are actuated by no other motive in refraining from becoming union members than a desire to profit from the work of others without cost to themselves. So far as the evidence goes, it rather indicates that refusal to join may stem from a variety of motives.

To give effect to the union proposal would be to substitute compulsion for effectiveness in the interests of the employees as a basis for attracting members. So far as we know, the only organizations in our democratic society in which membership has been made a condition of the right to work, are those with respect to which the legislature has by statute so stipulated, in the public interest and for its protection against loss or injury which might otherwise be occasioned by incompetence. Examples are afforded in the case of the various professions. The statute which is here in question, namely, the Industrial Disputes Investigation Act, does not so provide. Employees are left free by the statute to join one or more unions as they see fit, or not to join any union, save that the employer "may" agree to a term in a collective agreement "requiring as a condition of employment membership in a specified trade union or granting a preference of employment to members of a specified trade union"; Section 6 (1). The statute, however, carries the matter no further. If the

employer does not see fit to agree to such a term, the statute imposes no compulsion to that end upon either him or his employees. Therefore, for a board of the character of this Board to say that the employer ought to agree to such a term would be to go further than the legislature itself has seen fit to go. Such a statement by the Board would undoubtedly involve a finding in the present case that the grounds upon which the attitude of the railways is based are entirely inadequate and unreasonable, a finding we do not think we could make. However that may be, we think that the statute, properly understood, precludes, in the circumstances of the present case, a clause of the character here under consideration. The following sections are relevant:—

3. (1) Every employee has the right to be a member of a trade union and to participate in the activities thereof.

4. (2) No employer, and no person acting on behalf of an employer, shall

(a) refuse to employ or to continue to employ any person, or otherwise discriminate against any person in regard to employment or any term or condition of employment because the person is a member of a trade union; or

(b) impose any condition in a contract of employment seeking to restrain an employee from exercising his rights under this Act. . . .

6. (1) Nothing in this Act prohibits the parties to a collective agreement from inserting in the collective agreement a provision requiring, as a condition of employment, membership in a specified trade union, or granting a preference of employment to members of a specified trade union.

(2) No provision in a collective agreement requiring an employer to discharge an employee because such an employee is or continues to be a member of, or engage in activities on behalf of a union other than a specified trade union, shall be valid.

The respective constitutions of a number at least of the unions here in question provide that no member may hold membership in any other railway labour organization admitting to membership the same classes of employees, or any other organization or alliance that is dual to any of the purposes of the union.

The proposed union shop clause, so far as relevant, is as follows:—

All employees now or hereafter employed in any work covered by the rules and working conditions agreement between the parties hereto shall, as a condition of continued employment in such work . . . become members of, and thereafter maintain membership in good standing in, the organization party to this agreement,

with the following proviso, which has two branches, namely,

That such condition shall not apply with respect to

(a) any employee to whom such membership is not available upon the same terms and conditions as are generally applicable to any other member;

(b) any employee to whom membership was denied or terminated for any reason other than failure of the employee to tender the periodic dues, initiation fees and assessments (not including fines and penalties) uniformly required as the condition of acquiring or maintaining membership.

The insertion of this clause in a collective agreement between the railways and the unions obligates the railways (1) to require from their employees their agreement to join a particular union, an agreement which, by virtue of the provision in the union constitution already referred to, involves an undertaking not to join any other union, and (2) to discharge them if they refuse. This is the very thing which the statute, by Section 6 (2), prohibits.

To require each employee to join such a union calls for an offer on his part to become a member on the basis of the union constitution, which becomes a fundamental part of the contract of membership. It is obvious that there can be no reason for "denial" of any such application when accompanied by the required dues, and that therefore any suggestion that the situation is saved by the existence of the second branch of the proviso to the proposed clause is groundless. It is out of the question for an employee to offer to join such a union and at the same time to stipulate that, contrary to the constitution, he shall have the right to remain or become at any time during his membership a member of some other union. That would not be an offer to join that union at all. If such a thing were possible, an

employee could propose membership containing any reservation he saw fit, and thus avoid the penalty of discharge by going through the form of offering to join on his own terms. There can be no membership but membership upon the one footing, namely, that provided for by the constitution. Accordingly, in our view, the proposed clause, being contrary to the express terms of subsection (2) of Section 6, is invalid and one which the railways are precluded by the statute from entering into. Writing the proposed clause into the collective agreement automatically writes into it the union constitution. Any suggestion, therefore, that the latter may be "severed" from the former is, in our view, out of the question.

We therefore think that the statute precludes a clause of the nature of that here proposed in any collective agreement with a union the constitution of which contains a provision of the character under discussion.

Check-off

With regard to the check-off, the Board is of opinion that, as every employee now has the same right as any other creditor to assign the whole or any part of any debt, present or future owing to him, the proposed clause is one that should properly form part of the new agreements.

Emergency Clause

This clause owes its inception to the suggestion of a government official prior to the settlement of 1950. The suggestion arose out of the world situation which then existed. The Board does not think that sufficient reason now exists for the continuance of this clause.

Contract Term

Should it be open to us, upon the terms of reference, we would recommend that the term of the new contracts should run from the date of ultimate agreement between the parties, in view of the fact that less than ten months now remains of the new contract term.

Negotiations for Settlement

In addition to the other duties which the statute imposes upon a board of this character, it is provided by Section 32 (1) that

> A conciliation board shall, immediately after appointment of the chairman thereof, endeavour to bring about agreement between the parties in relation to the matters referred to it.

During the hearings at Montreal, the Board suggested to the parties before it that each should appoint a small group, the railway group to meet with the chairman of the Board and the nominee of the railways on the Board, and the union group to meet with the chairman and the nominee of the unions on the Board. It was thought that, under such an arrangement, in the initial stages at least, the parties would feel more free to discuss possible terms of settlement. Two meetings with each of these groups were accordingly held, at the first of which in each case the Board members present explained that it was the desire of the Board to carry out the obligation placed upon it in this regard by the statute, and to do so in any way possible. It was suggested to each of the small groups representing the respective parties that they should obtain instructions from their principals as to how far each was prepared to go toward settlement, and that at a later meeting in each case the Board members should be informed so that the area in dispute might be surveyed and, if possible, a basis of settlement reached.

At the second meeting with the railway group, the Board members were apprised that the railways would not stand on their 7 per cent offer if the unions were prepared to negotiate within some area which would take into account the amount required to bring the date settled in 1950 in line with the rise in the cost of living since that time, and having regard also to the current rate in the durable goods industry. The Board members meeting with the employee group on the second occasion were advised by that group, however, that they had no suggestion to make.

Accordingly, the matter of a possible settlement had to be left in this position.

Dated this 21st day of November, 1952.

Respectfully submitted.

(Sgd.) R. L. Kellock.

Minority Report of Board Member David Lewis

To the Hon. Milton F. Gregg, V.C.,
Minister of Labour,
Ottawa, Ontario.

Sir:

With great regret, I do not find it possible to agree with the recommendations made in this case by my colleagues. My regret is the greater because I fully appreciate the importance of finding a basis for settling the dispute.

The increase in wages which my colleagues recommend is, in my respectful view, substantially lower than is justified by all the facts and circumstances of this case. The majority recommendation of 16 cents per hour is only 1 cent more than the increase demanded by the rise in the cost of living, calculated on the basis of the new Consumers' Price Index. It is my considered conviction that a recommendation which gives the employees concerned in these proceedings only one cent more than the adjustment necessary to make up their loss consequent upon the increase in their cost of living, fails to take into account the many other, and equally important, factors which should govern this case.

Similarly, I cannot find any justification for refusing to recommend an adequate form of union security to the unions here involved, at a time when the trend toward increasing union security in all industry is striking and unmistakable. The history of the railway unions, dating back half a century, is one of consistent responsibility. To deny such labour organizations a measure of union security which has in fact been granted to numerous trade unions in other fields is, in my respectful submission, unjustified and unjustifiable. It is all the more so when both the Canadian National and the Canadian Pacific Railways are parties to collective agreements in the United States which grant to their employees across the line precisely the union security provisions which the unions here requested for their Canadian members.

Wages

Myths die hard. The myth that railway workers are particularly highly paid is no exception. I have no doubt that it is a myth and a false one. The evidence placed before the board proved to my satisfaction that, as far as the 143,000 and more employees involved in these proceedings are concerned, they are behind rather than ahead of their fellow-workers in other basic industries.

The Railways informed the Board that the average hourly earnings for these employees is $1.30 per hour. It is to be noted that these are their *average* earnings. The unions informed us that in the basic steel industry the labour rate is $1.43½ per hour; the middle rates ranging from $1.71 to $1.76 per hour. In the case of Massey Harris, the base labour rate is $1.37 per hour and the average earnings are $1.71 per hour. Consolidated Mining and Smelting, owned by the CPR, pays the common labourer a rate of $1.48 and the average for its employees is $1.66. The base rate for employees of the Toronto Transportation Commission is $1.51.

I have no doubt that these examples could be multiplied many times. It is a fact that in the organized sectors of basic and important industry in Canada, the *lowest labour rates* are higher, and in some cases substantially higher, than the *average*

earnings of the railways employees here concerned. This, in my view, is the key to a proper analysis and understanding of the issues involved in these proceedings.

Furthermore, the non-operating railway employees have lagged behind in other respects. They won the forty-hour week only in June, 1951, and that after a strike. Moreover—and this was shocking news to me—they enjoy only two of the accepted fringe benefits in industry. They get annual vacations with pay of one week up to one year, 7 days up to three years and two weeks after 5 years of service. And the railways have a contributory pension plan.

However, the employees *do not have any paid statutory holidays.* Only if they work on such holidays do they get paid, although at the rate of time and a half. There are no shift premiums. Perhaps most important of all, *there is no health and welfare insurance plan for them,* not even a contributory one.

The railways made a great deal of the free transportation privilege which is accorded to their employees. I should not wish to belittle this benefit; it is certainly of value to employees who have occasion to travel. However, there are three comments that may fairly be made.

First, the rules governing the free transportation privilege to employees provide safeguards against the use of this privilege interfering with revenue-producing traffic.

Secondly, and for this reason, the benefit does not cost the railways anything.

Thirdly, this form of benefit is common in most other industry. Employees of large retail establishments and in consumer goods industries commonly receive reductions for purchases made by them from their employers

The conclusion is therefore inescapable, to my mind, that the free transportation privilege does not set the railways apart from other industry and is not a cost to them. It is therefore not the kind of benefit which may fairly be considered in a discussion of fringe benefits generally.

As far as the annual vacations are concerned, the scheme of the railways is certainly not at the top of the list. It is true that slightly more than one-half of the durable goods workers receive two weeks after five years. It is, however, also true that about a third of the employees in the group enjoy two weeks' vacation after one, two or three years of service, instead of five. And it is also true that a growing portion of Canadian industry provides vacations of three weeks after fifteen, twenty or twenty-five years of service, while there is no three-week vacation for any of the non-operating employees. It is, therefore, clear that the vacation plan of the railways is, at best, no more than the average in Canadian industry and is certainly not an advanced plan.

Paid statutory holidays are standard in present-day collective agreements. Thus some 73 per cent of the employees in the durable goods industries covered in a survey made by the Department of Labour as at October 1951, were paid for six, seven, eight and nine statutory holidays, although not worked.

Only 13 per cent of the employees in this group did not enjoy this benefit, the remaining 14 per cent received from one to five paid holidays. In the same group of industries, and on the same date, over 85 per cent of the employees had some form of health and welfare insurance plan.

The above simple facts should once and for all lay the myth that the railways employees are in the vanguard with regard to wages and the like. They may have been at one time, they are no longer ahead of other basic industry. On the contrary, they have begun to lag behind, clearly and shockingly.

For this trend I can find no justification, and I believe it to be the nation's duty to halt it. The railways comprise one of the most essential industries of the country. One of the two major systems is owned by the Canadian people; the other came into existence as a result of huge monetary and land grants by the nation. One frequently hears a remark which is as amusing as it is revealing. It is said that the Canadian people own the CNR but have not paid for it; but that they have paid for the CPR and do not own it. Historically, this is not too exaggerated a description.

Railway employment requires skill and a great sense of responsibility. The hours of work must be adjusted to the demands of freight and passenger traffic, and to the inconvenience of employees. Many of the workers concerned here have to meet the public, whether in the station, the ticket office, the express office, the dining car or the sleeping car.

Certainly there are compensations. Employment on the railways has more security, although during the thirties railway workers suffered lay-offs and wage cuts like their brothers. A job on the railways also has an honourable status in the labour force of the country. But these are reasons

for more, not less consideration. It is not the custom in our civilization to pay less for higher regarded labour.

In view of all the above factors, it is impossible to justify the levelling down process which has latterly characterized the wages of non-operating railway employees. This is the more reprehensible since the Canadian people have a direct interest in and control over the railway industry, and the unions before us have enjoyed a half-century of collective bargaining.

One of the grounds on which the Unions based their demand for a 45 cent hourly increase was to achieve parity with wages of similar groups on the United States Railways. Both sides of the dispute spent a great deal of time analysing the relevant considerations. The Railways presented many arguments in opposition to the request for parity which have been adequately summarized in the Majority Report.

It is worth noting, in passing, that the Railways have set six and one-half per cent as an objective for the return on their net investment. Their sole justification for this rate of return for Canadian Railways is that a similar rate has been set for American Railways by the United States Interstate Commerce Commission. The Unions are, in my view, justified in chiding the Railways about their double standard in this respect. If the Railways' submissions are valid, that the differences in the two economies do not justify parity of wages, then surely it follows that these same differences cannot justify parity in return to capital. If, on the other hand, the Railways feel they are right in asking the same rate of return in spite of the differences, then they cannot successfully oppose the employees' request for the same wages. I appreciate that this does not meet the merits of the problem, but it does puncture the air of righteousness with which the railways rejected the employees' demands.

However, a study of the growth of the economies in the United States and Canada since the end of the last war reveals striking and conclusive facts which fully justify the unions' protest against the size of the disparity between railway wages in the two countries.

It is undoubtedly true that the per capita wealth in Canada is considerably lower than the per capita wealth in the United States. It is also true that by and large Canadian wages and salaries, as well as other income, tend to be lower than in the United States. These are some of the facts on which the Railways founded their attack on the request for parity of wages for one group of Canadian workers.

However, there are other equally relevant facts. Some of them are graphically presented in the following tables 1 to 10. These tables cover, some in total amounts and some in per capita calculations, the accepted indices for the measurement of economic growth of a country. They compare the economic growth in Canada and in the United States from 1946 to 1951 inclusive. They are, in other words, a measure of the rate of growth in the two countries since the end of the second World War.

1. GROSS NATIONAL PRODUCT 1946-51 IN MILLIONS OF DOLLARS

Year	Amount	Canada Per Cent Rise Over 1946	Amount	United States Per Cent Rise Over 1946

9. TOTAL NON-AGRICULTURAL WAGES AND SALARIES PER MEMBER OF THE LABOUR FORCE 14 YEARS OF AGE AND OVER

Year	Amount	Canada Per Cent Rise Over 1946	Amount	United States Per Cent Rise Over 1946
1946	1,050	.....	1,887	.....
1947	1,200	14·28	1,996	5·77
1948	1,371	30·57	2,134	13·08
1949	1,453	38·38	2,098	11·18
1950	1,517	44·47	2,261	19·82
1951	1,748	66·47	2,652	40·54

10. GROSS DOMESTIC INVESTMENT AS PERCENTAGE OF GROSS NATIONAL PRODUCT 1946–1951

Year	Canada	United States
	p.c.	p.c.
1946	11·6	10·7
1947	15·4	13·3
1948	17·2	14·5
1949	18·0	13·9
1950	17·7	15·8
1951	17·9	14·6

The relevant columns in the above tables are the ones showing the percentage increases over 1946. They disclose that on every index of economic growth, whether in total amounts or in per capita amounts, the rate of growth in Canada since the end of the second World War has been substantially greater than the rate of growth in the United States. Furthermore, this is true not only for the period as a whole, but year by year. In fact, even in 1949, the year in which the United States suffered a slight recession, the Canadian economy continued to show consistent advance.

What the above tables clearly show is that since the end of the second World War, the gap in economic development and wealth between Canada and the United States has been steadily narrowing. In absolute figures Canada is still below the United States. In relative terms, however, our rate of increase has for the past six years been substantially higher. This must be a matter of pride for every Canadian.

But what has happened to the gap between Canadian and American Railway wages during the same period? Non-operating Railway employees in the United States received, from 1946 to July 1952, increases totalling *67 cents* per hour, plus a 20 per cent adjustment for reduction of the standard work week to 40 hours. On the other hand, non-operating Railway Employees in Canada received during the same period increases totalling *34 cents* per hour, plus a 20 per cent adjustment for reduction of hours. In short, the disparity between the wages of the said employees in the United States and their counterpart in Canada increased by 33 cents from 1946 to the present.

Thus, at the same time that the gap between the Canadian economy and the American economy substantially narrowed, the gap between Railway wages in Canada and Railway wages in the United States widened. This cannot, in my view, be justified on any basis. Surely it was to be expected that as the disparity between

the two economies narrowed, the disparity in wages of employees would also narrow; that at least it would not increase. In fact, as has been shown, the disparity in railway wages has increased to a shocking extent.

Of particular relevance are Tables 4 and 9 above. The first gives the totals of non-agricultural salaries and wages year by year from 1946 to 1951; the second gives the per capital non-agricultural salaries and wages covering the same period. In both tables the rate of increase for Canada is strikingly greater than that for the United States. When we reach the year 1951, the increases over 1946 for Canada are 81·95 per cent and 66·47 per cent as against 53·63 per cent and 40·54 respectively for the United States.

What these two tables graphically disclose is that the gap between Canadian and American wages as a whole has been steadily narrowing at an encouraging and significant rate. Railway employees have a right to feel resentment and indignation that at the same time the disparity in their own wages has been as steadily increasing.

This fact is further illustrated in one of the exhibits filed by the Railways. This exhibit compares the average hourly earnings for Canadian and United States employees in Steam Railways, manufacturing as a whole, durable goods as a group, and a number of individual industries. It also shows the percentage by which American wages exceed Canadian in every case.

The striking fact which emerges is that the percentage by which Railway wages in the United States exceed those in Canada is the third highest in the entire Exhibit. Only Coal Mining and Leather and Leather Products show larger differences. American Railway wages are higher than Canadian by 45·4 per cent. Wages in manufacturing as a whole in the United States are higher than in Canada by 28·3 per cent, and wages in the Durable Goods industries show a disparity of only 24·9 per cent. In other words, the difference between American and Canadian Railway wages is 17·1 per cent higher than the disparity in wages for all manufacturing and 20·5 per cent higher than the gap in wages for the Durable Goods industries.

The facts disclosed by the tables and exhibits referred to show that Canadian wages generally have advanced in some relation to the economic growth, particularly as compared with the rate of progress in the country to the south of us. Railway employees, however, have not only not shared in this advance, but their relative position has actually worsened.

It is impossible to draw any other conclusion from the above facts than that Railway wages have not kept pace with the advance in the Canadian economy. Whatever justification there may be for some differential between Canadian and American wages, there is no justification whatever for the disparity in railway wages having grown substantially during a period when the disparities in the economy as a whole and in wages as a whole were decreasing.

From the incontrovertible facts which have been analysed, it is impossible to draw any other conclusion than that the Unions' demand for parity with American wages is fully and thoroughly justified, at least to the extent to which the differential has grown since the end of the second World War, that is to say, to the extent of 33 cents per hour. If my final recommendation is somewhat lower, as it will be, it is because I realize that it is not possible to apply comparisons of this sort or of any other sort mechanically.

Before dealing with the basis for the increase which, in my view, should be recommended, it is necessary to comment briefly on a few other matters because of their importance to any discussion of Railway wages.

In their presentation to the Board, the Railways did not deny the Union contention that there have been increases in efficiency and productivity in the railway industry, but they did seek to minimize their extent. To my mind, there is no doubt that there has been a substantial increase in productivity and a reduction in unit cost in Railway services as in all industry. This has, in fact, been admitted by Railway spokesmen on other occasions.

In an address at the Annual Dinner of the Canadian Railway Club in Montreal delivered on February 1, 1952, Mr. E. A. Bromley, Vice-President of the Canadian National Railways, stated

> During the past twenty years in fact, our efficiency has doubled. . . . It is true that our efficiency of operation is steadily increasing and we are making steady progress in the improvement of Railway facilities and equipment.

Giving evidence before the Board of Transport Commissioners on September 24,

1952, Mr. F. V. Stone, head of the Department of Research of the Canadian Pacific Railway, stated

> Our rail costs are coming down over the long time because there has been an increase in the efficiency of Railway Transportation.

It is generally difficult to measure productivity and it would seem to be particularly difficult to measure it in the case of Railway services. However, there was no reason to assume that there had not been progress in Railway productivity and the above statements of authoritative spokesmen for the two Railways fully support the contentions of the Unions that that increase has been significant and substantial. It is surely an established principle in Western democracies that the employees of industry are entitled to share in technological advance. This is another reason why I cannot conscientiously agree with a recommendation which provides only one cent above the amount required by the rise in the cost of living.

The Railways also, and quite properly from their point of view, emphasized the growing competition from road, air and water transport. No one would wish to minimize this problem. However, the unions gave two replies, each of which deserves attention.

They pointed first to the testimony on this point given before the Board of Transport Commissioners by Mr. Stone, the CPR official mentioned earlier. The following extracts from Mr. Stone's evidence are relevant.

He stated, "I doubt very much whether truck transport has actually increased percentage-wise more than rail transportation . . ." and he continued,

> . . . Trucks have been operating now for quite a number of years and airplanes are now in the picture. Notwithstanding that, the total volume of railway traffic has been increasing, and it has been increasing at a rate at least equal to, if not greater than, the increase in the physical output of all goods and services in Canada. This seems to indicate that there has been room for all of the forms of transportation notwithstanding the fact that other forms of transportation are growing . . .

I fully suspect that Mr. Stone's evidence is accurate and valid. The problem is apparently not mere competition but the lack of regulation of all transportation instead of regulation for railway transportation only.

The spokesman for the Unions before this Board informed us that the railway employees in their submissions to another body had urged regulation of all forms of transportation. He expressed the opinion that that was the proper answer to the problem of competition which faces the railways, rather than asking the railway employees to carry the load.

Another point which the Railways stressed was the question of additional revenues which they would require to meet the unions' wage demands. The unions took the position that the question of revenues which they would require to meet increased costs was a matter for the Board of Transport Commissioners and not for a Conciliation Board dealing with wages.

The establishment of freight rates is a matter of national policy. The factors which enter into the problem are related to the entire national economy, including the import and export industries which are so important to Canada. Decisions to keep freight rates at certain levels are made on the basis of national considerations. Such considerations are responsible for certain differentials in freight rates and for keeping transportation costs on certain basic and important commodities which move across and out of the country at substantially lower levels.

The unions take the position that the railway employees alone should not be made to bear the burden of decisions and policies which are made by a national agency and the national Parliament for the benefit of the entire national economy. If such decisions and policies involve adjustments, the burden, in the submission of the unions, should be spread across the nation and not alone on the railway workers.

In my view, this position of the railway employees, is valid and unanswerable. The question of additional revenue to which the Railway may or may not be entitled as a result of the eventual wage settlement, is a matter for the Board of Transport Commissioners. That agency alone has the legal competence and the financial information to make a decision on the matter.

In the light of the above discussions, I now come to the question of what is a justified and justifiable recommendation on wages. In seeking a group of industries which may fairly be compared with the non-operating railway employees, the Chairman of this Board as arbitrator in another

dispute in 1950, settled on the group of durable goods industries as the most comparable. I agree that to the extent that such comparisons can be made, the durable goods group is as fair, subject to one reservation, as may be found. My reservation relates to the inclusion of the wood products industry in the comparison, but with this I shall deal later. For the moment I am prepared to use the group as a whole as the basis for measuring the wage adjustment, appropriate in this case.

My respectful difference with my colleagues is that I cannot accept as valid the proposition that the earnings of the railway employees should be mechanically placed at the same level as the average earnings of the durable goods group. This is, in effect, one of the two bases for the majority recommendation, the other being the rise in the cost of living. In stating this, I am not losing sight of the fact that my colleagues have made an allowance of some five cents against probable further advances in the durable goods average during the next 10 or 12 months.

I adopt a statement made by the spokesman for the railways, although in a different context. He said, "We submit that the influence of the *general wage trend* is the important thing if a comparison is to be made with railway wages for such a diverse group as the non-operating employees" (Italicizing mine).

In attempting to measure an appropriate wage adjustment it is seldom, if ever, justifiable to apply an average in a different group of industries automatically and mechanically. The appropriate application is one that is based on the "general wage trend", and this is the basis which should, in my view, be used here.

There are other and even more compelling reasons why the *rate* of increase rather than the actual increase in cents is the appropriate measure in the comparison between the average in the durable goods industries and the employees here concerned. The first reason concerns the inclusion in the durable goods group of the wood products industry. In my opinion, this industry has no place in any comparison with railway employees.

It must first be noted, to avoid any misunderstanding, that the wood products group here referred to does not include the manufacture of paper products. It does not, in other words, include the pulp and paper industry, nor miscellaneous paper products. This industry is not one of the durable goods group.

The wood products industry comprises saw and planing mills, furniture manufacturing and miscellaneous wood products. This industry is in large measure highly seasonal; it is in substantial measure small-scale; it is unskilled to a much larger proportion than the other industries in the group and than railway employees; it is unorganized to a much greater extent than the other industries in the durable goods group, and certainly than are railway employees. In short, the wood products industry falls within the category of the less organized, seasonal and low-paid industries. It is, therefore, quite inappropriate to take this sort of industry into the comparison.

Secondly, it is important to bear in mind that the statistics on the durable goods industries cover unorganized as well as organized, small-scale as well as large-scale, uneconomic as well as economic units; small, private companies and partnerships as well as public corporations. How can it be appropriate to compare wages in some small, unorganized plant manufacturing glass or clay products or even steel equipment or auto parts with wages in gigantic national railway system? Yet such plants are included and affect the over-all average in the statistics.

Surely it is necessary to take account of all these important factors. They serve to explain why the average for iron and steel products as at August 1, 1952, was 145·5 cents, while the middle rate in basic steel is over $1.70. They also explain why the average for transportation equipment on the same date was 146·4 cents, while the average for Massey Harris was $1.71.

In short, the actual hourly or weekly earnings in the durable goods group as a whole are dragged down by the inclusion of the wood products industry and of unorganized as well as organized units, small scale as well as large scale industry, and uneconomical as well as economical establishments.

For the above reasons I find it impossible to agree that the earnings of the railway employees involved in these proceedings should be the same as the average earnings of employees in the durable goods industry. The result of such a proposition and its application is to level down the wages of railway employees to earnings which are affected by factors which do not obtain in the case of the railways.

In my view, the proper application of the comparison between Railway wages and those in the durable goods group is to

give the employees before this Board the same, or approximately the same rate of increase during the period under review.

As of August 31, 1950, the date on which the last railway settlement became effective, a certain relationship was established between the weekly earnings of the Railway employees here in question and the employee in the durable goods group. No case has been or can be made out for destroying that relationship adversely to the Railway employees. As at the date mentioned, the average weekly earnings of the Railway employees were 51·62, while the average weekly earnings of the durable goods workers were 46·85. I do not believe that it can be shown that the differential was not thoroughly justified in view of the factors and differences which were discussed earlier.

The following table gives the percentage increases which have taken place in all manufacturing, in the durable goods group as a whole, and in the industries making up the durable goods group. One column shows the percentage increases in hourly earnings and the other in weekly earnings, from September 1950 to August 1952, the term of the last agreements between the Railways and the seventeen unions before this Board.

Percentage Increases
in hourly and weekly earnings
as at August, 1952—over September, 1950

	Hourly	Weekly
All manufacturing	23·5	21·9
Durable goods	22·9	22·5
Wood products	9·9	9·7
Iron and steel products	24·8	22·7
Transportation equipment	19·7	21·6
Non-ferrous metal products	32·2	25·8
Electrical apparatus and supplies	21·0	21·1
Non-metallic mineral products	24·1	24·3

It will be noted from the above table that, even when the wood products industry is included, the percentage increases for the durable goods group as a whole during the two years under review were 22·9 per cent in hourly earnings and 22·5 per cent in weekly earnings. I believe that it is this rate of increase which is properly applicable to the non-operating railway employees.

My recommendation is, therefore, that the wages of the Railway employees in these proceedings be increased by a number of cents equivalent to a 20 per cent increase on the average. The present average earnings of these employees is $1.30 per hour. The increase which I, therefore, recommend is an average of 26 cents per hour. This order of increase is fully justified by all the facts which appear to me relevant.

The validity of this recommendation may be fully supported on another basis. Even if one accepted the principle of establishing some kind of parity between the average earnings of the durable goods worker and those of the Railway employees, one arrives at the same final rate as the above recommendation produces, if proper allowance is made for some other relevant factors.

At September of this year the durable goods hourly average was 141·1 cents. To this must be added some adequate provision for the probability of continuing advance in the durable goods earnings during the next year, as well as a proper allowance for the difference in fringe benefits between the two groups. Thus, the September average for the durable goods group was higher than the August one by almost 2 cents, and even the September increase did not include a number of increases already in effect and some others which are to come into effect during the period of the Railway agreement here in dispute.

Prognostication is always difficult, and there are no precise ways of measuring what the likely future advance in the durable goods industry may be. We can only be guided by the past, making allowance for influences which can be foreseen.

As shown in the earlier table, the increase in the durable goods industries over the two year period from September 1950, to and including August 1952, was between 22½ per cent and 23 per cent. This is an average annual rate of increase of slightly more than eleven per cent. It is, however, reasonable to assume that the rate of increase during the next year is likely to be substantially smaller.

The cost of living seems to be stabilized at the present time. While one cannot be certain that another upward trend may not come, it seems less rather than more likely. The pressure on wages exerted by the rising cost of living will, therefore, likely be less in the next year than it was in the past two years. It is also reasonable to assume that as a general wage level goes up, the rate of increase slows down.

For these, among other reasons, it would not be reasonable to forecast the same rate

of increase during the next twelve months as during the past twenty-four months. I would, therefore cut the rate of increase in half as a forecast of what is likely to happen during the next twelve months. I appreciate that my doing so is entirely arbitrary, but it is necessarily so. There is no way, to my knowledge, by which it is possible to make such a forecast with any scientific accuracy. It seems to me, however, that the above analysis is not too invalid and the forecast based on it not too unreasonable.

An adjustment of 5·5 per cent must therefore be made on this count on the September average earnings of the durable goods workers of 141·1 cents. This amounts to 7·8 cents.

We must now attempt to evaluate the fringe benefits which the durable goods worker obtains and the Railway employees in these proceedings do not. I pointed out early in this report that the only fringe benefits which the Railway employees have (aside from travel privileges) are annual vacations with pay and pensions. I also pointed out, by reference to Government information, that the annual vacations with pay obtaining on the railways are substantially below the vacation plans obtaining in about one-third of the durable goods group.

On the Railway Pension Plan, the union spokesman before this Board expressed the view that it was less advanced than Pension Plans obtaining in other industries. However, no evidence was produced to support this statement.

Even if we assume that no allowance is due in respect of annual vacations and pensions, there still remains the shocking fact that the Railway employees in question do not enjoy any paid statutory holidays and do not have any health and welfare plan. I leave out of consideration shift premiums because they are included in the figures of average earnings for the durable goods industries.

With great respect, I cannot agree that merely because the unions in this case have not asked for these fringe benefits, no account should be taken of their value in arriving at a recommendation regarding the wage increase. If we are to apply to the Railway employees the income or its equivalent of the durable goods worker, then surely we cannot ignore the monetary value to him of statutory holidays and health and welfare plans. This is particularly valid, it seems to me, in view of the fact that so large a proportion of the durable goods workers enjoy these benefits.

There is no difficulty about calculating the monetary value of statutory holidays. In the case before us, I calculate that value to be one-half of one cent per hour per employee, for one paid statutory holiday. I see no reason why these employees, with such a long history of collective bargaining, should be given the benefit of less than eight paid holidays which is common in most, if not all basic organized industry in Canada. This means a monetary allowance of four cents per hour.

It is much more difficult to calculate the appropriate monetary allowance for Health and Welfare plans. Such plans vary in the proportion of employer contribution as well as in the cost. They vary in value all the way from about 1½ cents per hour to 3 or 4 cents per hour. It would, it seems to me, not be unreasonable in the circumstance to allow 2½ cents to the Railway employees for the equivalent of a Health and Welfare plan.

If the above adjustments are made, we arrive at a figure of average earnings of 155·4 cents per hour (141·1 plus 7·8 plus 4 plus 2·5). My recommendation of an average hourly increase of 26 cents would result in average hourly earnings of 156 cents.

This confirms and, in my respectful opinion, fully supports the recommendation made on the basis of the rate of increase in the durable goods industries since September 1950. I am further strengthened in my recommendation by reference to the increases granted by the Railways to some of the operating unions. Thus the Engineers have been given an increase of 11 per cent. On the basis of information supplied by the Railways, I have calculated what the 11 per cent increase to these employees would amount to in terms of hourly increases on the basis of the number of hours worked per month by the non-operating employees. My calculations indicate that CPR passenger engineers received an increase, on the hourly basis as stated, of 27·4 cents minimum and 32·8 cents maximum. CPR freight engineers received 24·7 cents minimum and 29·3 cents maximum on the same basis. CNR passenger engineers received 28·5 cents per hour minimum and 34·3 cents per hour maximum. CNR freight engineers received 25·9 cents minimum and 30·7 cents maximum. And the Board was informed that in periods of relatively heavy traffic the amount of time worked by operating personnel tends to be at or around the maximum rather that at or around the minimum.

67040—6½

However that may be, I can see every justification for a recommendation which, if supported by other valid grounds, aproximates in cents the minimum increase granted to other employees of the Railways.

It is my belief that the Canadian people would be in support of the principle that employees of a basic industry like the Railways deserve and are entitled to wages which compare favourably with the leaders of the land rather than with the stragglers. It is also my belief that the Canadian people would agree that the employees and the Union here concerned should not be penalized, relatively to the gains made by other employees and other unions, because the Railway unions have through the years acted moderately and responsibly.

Form of Increase

Regarding the issue as to whether the increase this time should consist of a number of cents across the board or be on a percentage basis, I am in agreement with the conclusion of my colleagues. I believe there is validity in the desire of the railways not to continue the process of erosion of differentials. I also agree with my colleagues that the change to the percentage increase basis need not be, and should not be, made in one settlement.

I therefore propose that the recommendation made above of an average increase of 26 cents per hour be applied at this time in two ways, namely, an increase of 10 per cent on present wages plus an across the board increase of 13 cents per hour.

Cost-of-Living Escalator Clause

If I understand the reasons for the objections to an escalator clause correctly, they are basically two. The first is a general objection to an escalator clause in a one-year agreement, particularly in view of the fact that there is always a considerable time-lag between the filing of an application for freight increases by the Railways and the handing down of a decision by the Board of Transport Commissioners.

The second objection is based on the belief that the rise in the cost of living in the next twelve months is not likely to be substantial, if there is any rise at all.

The answer to the second objection is obvious. If the rise in the index should prove to be unsubstantial, then the escalator clause would not come into operation. Its presence in the agreement would be of some psychological value to the employees and would do the railways no harm.

The answer to the first objection is, in my view, also clear. As the unions pointed out in their submissions, the increase in the cost-of-living index between September 1, 1950 (169·8), and September 1, 1951 (189·8), was of the order of 20 points or 11·8 per cent. On the other hand, there was actually some decrease in the index in the second year of the last contract, namely, between September 1951 and September 1952.

However, the fact that there have recently been years in which the rise in the cost of living was substantial, as substantial as 11·8 per cent, fully justifies the desire of the employees to have protection against such an eventuality. The fact of the matter is that at the end of the two-year period of the last agreement, the employees lost the equivalent of some 15 cents per hour in their purchasing power.

As to the not unreasonable argument that the Railways are under a particular handicap because of the way in which the price for their service is set, the unions again gave, what seems to me, a conclusive answer. The existence of a collective agreement, without an escalator clause, subjects employees to a time-lag in exactly the same way as the railways are subjected to it by the process of obtaining additional revenue. Thus the employees lost purchasing power every month from September 1950 to January 1952. Throughout those 15 months there was a continuous rise in the cost of living, and every month, progressively, the purchasing power of the employees was reduced. An adjustment based on the cost of living made at the end of the period does not compensate them for the losses in purchasing power which they suffered throughout the period.

The question therefore resolves itself into whether this Board should give greater weight to the possible loss of the railways caused by the time-lag referred to or to give greater weight to the loss of the employees and their families. One or the other must, by the circumstances referred to, be placed at a disadvantage. I have no hesitation in concluding that this Board should give greater weight to the possible loss to the employees, since it would directly affect the welfare of their families.

I would therefore recommend the inclusion of an escalator clause in this collective agreement providing for adjustments

at quarterly intervals, so as to reduce possible dislocation by more frequent adjustments. Since the new Consumers' Price Index is now in effect, it would be necessary for the Unions and the Railways to work out a formula appropriate to the new Index.

Union Shop and Check-off

My second major disagreement with my colleagues is their failure to recommend an adequate form of union security. The actual proposals of the Unions in this case are set out in full in the report of the majority of the Board.

A great deal has been written and said on the principles of the union shop. Those opposing a form of effective union security base their opposition on the ground that it interferes with the liberty of the employees to join or not to join as they wish. They point to the fact that such freedom is not only basic to our democratic system but is also safeguarded in the statutes governing labour relations.

Philosophical discussions of principle on issues of this sort are always difficult, and reconciliation of differences is even more difficult. The premises on which the protagonists proceed are much more in the nature of beliefs than of logical conclusions. They are dictated more by experience and motives than by intellectual analysis.

Appeals to the principles of liberty and freedom have, in industrial history, frequently been used to oppose necessary social progress. It is a historical fact that the introduction of laws against child and female labour, laws to establish minimum wages or maximum hours, those relating to safety measures in industrial undertaking, or laws governing combines, to give only a few examples, were in their day opposed because they were alleged to interfere with the liberty of the individual. Undoubtedly they did so interfere, but in the interests of a higher and more universal form of liberty. Today it is universally recognized that all such laws of protection have been milestones on the road of humanity's progress.

I have a strong conviction that the propositions about liberty and freedom voiced against union security will in time be shown to be as misapplied as in the examples given. There is, after all, no interference with any citizen's liberty when, on seeking employment, he is informed that there is a recognized trade union in the industry, that such union acts by law on behalf of all the employees and that, consequently, he is required to take his place and to play his part as a member of that union. Nor is there any loss of liberty in informing an employee that there has been a trade union bargaining collectively on behalf of all employees for a long time, that he, as well as the others, has benefited from that collective bargaining and that, by decision of the vast majority of the employees, it is now proposed to require every employee to take his place and play its part in the union and to contribute to its upkeep and administration.

Surely it is not possible to deny that in most cases the interference is not with the liberty of the employee, but rather with his greed and indifference. The reason why an employee fails to join his appropriate union in an industry which has enjoyed a long history of collective bargaining is, in the vast majority of cases, disinterest and, in some cases, sheer selfishness and parasitism.

In my view, therefore, it is a mistake to be impressed with arguments regarding liberty in matters such as the union shop. It is of much greater relevance to consider two other basic principles of democratic behaviour, namely, that every right involves an obligation and that every member of a community should contribute to its upkeep and to its necessary services from which he benefits. The principle of liberty in a modern democracy must be given positive application through the widest possible participation by all citizens in the instruments of democracy.

The non-operating employees of the Railways in this dispute have enjoyed collective bargaining for many decades. As a result of that collective bargaining all of the employees, whether members of the unions or not, have gained many rights and numerous benefits. Surely, it is neither fair nor democratic that a proportion of the employees should enjoy the rights gained for them by their fellow employees without themselves carrying out their corresponding obligation to be active and participating citizens in their industrial community. And similarly, it is neither fair nor democratic that some employees should enjoy the benefits gained for them by the Unions without making any financial contribution to the servicing of the collective agreements from which they benefit, and of carrying on the necessary and costly activities of the agency which serves them.

There are other and more practical considerations which the Unions drew to the Board's attention. The wider the membership in the Unions, the more do they

reflect the wishes of the employees and the more difficult does it become for a small group of demagogues to gain control.

There is also the effect of the resentment which union members justly feel against "free Riders". The resentment is entirely justified and understandable and it results in ill-feeling among employees which cannot but be harmful to efficiency. The above and similar considerations more than outweight, in my view, the alleged loss of freedom.

There is a further and important practical consideration applicable to all industry and to the railway industry in particular. The lack of union shop and check-off provisions in a collective agreement places on the committees and personnel of the unions a terrific burden of canvassing for membership and of collecting dues. This burden is particularly great in the case of the Railways because the employees are scattered from east to west and from north to south across the country. The union-management and employee-employer relationship would surely benefit if the time and efforts spent by committees and personnel on these things were available for servicing of the agreements and for study, discussion and consideration of policies.

The evidence before the Board establishes that the principles on which the Railways claim to base their position are certainly not such as to be incapable of adaptation, to put it gently. The evidence is that the Eastern Carriers in the United States concluded agreements with 15 of the 17 unions before this Board providing for exactly the same form of union shop and check-off of union dues as are requested here. Further, the Canadian National and Canadian Pacific Railways are parties to those agreements, since they have branch lines and employ workers in eastern United States. Surely the unions in Canada cannot be blamed for resenting the refusal of the Railways to grant their Canadian employees what they have already granted their American employees.

The reply of the Railways is that in the Carriers' Conference of the Eastern United States they form a very small part and they, therefore could not refuse to go along with the other railways. This appears to me to be more in the nature of an evasion than a justification. If the principles to which the Railways claim to cling are as strong as they make them out to be, then surely it was their duty to stand on them in the United States as in Canada. Furthermore, if the American Railways, which had raised the same principles, could see fit to grant the Union Shop and check-off, then again, the principles cannot be as sacred as they are here alleged. It seems to me provocative, to say the least, to refuse the Unions before us a privilege which has been granted to the same unions in the United States.

On this issue, as on the one of wages, we have here a case where an industry which should be in the vanguard is proving to be among the most intractable. The Railways filed an exhibit which contained the conclusions of an analysis made by the Department of Labour of 937 Collective Agreements covering some 610,279 employees. The date of publication of the results of this analysis would seem to be May 30, 1952.

The Exhibit shows that collective agreements covering 32·8 per cent of the total number of employees under review contained provisions for a closed shop, union shop, or a modified union shop. Agreements covering 12·7 per cent of the employees contained provisions for maintenance of membership in its various forms. Thus a total of 45·45 per cent or almost one-half of the employees in the survey were covered by collective agreements providing for the highest forms of union security.

The same survey shows that some 22 per cent of the employees covered were working under collective agreements providing for compulsory check-off in combination with closed or union shops, for the Rand Formula or modified Rand Formula, and for compulsory check-off for all union members. Some 15 per cent were covered by collective agreements containing provisions for voluntary irrevocable check-off and some 5 per cent provisions for some sort of combination of voluntary and compulsory. Thus some 42 per cent of the employees under review in the aforementioned survey were covered by agreements providing for either compulsory check-off of one form or another or voluntary but irrevocable check-off. Another almost 33 per cent were working under agreements providing for voluntary revocable check-off or voluntary check-off without specifying whether it was revocable or irrevocable. Altogether, therefore, close to 75 per cent of the employees in the survey enjoyed some form of check-off.

The above are the facts about union security and check-off in Canadian industry. And it was admitted before the Board that the trend continues in the direction of greater union security. In the light of these facts I can find no justification for

rejecting the request of the Unions in this case. In my respectful view, these Unions have such an unassailable history of responsible leadership that if any Union is entitled to the privilege, they are entitled to it beyond question.

To ask the Unions before us to stand on the sidelines and watch the parade along Union Security Avenue growing in size and strength for other and younger unions, with a much more turbulent history, while they are refused admission to that Avenue, is to ask for the unreasonable and to beg for trouble.

With some trepidation, and with great respect, I must take issue with what appears to be a main ground for the rejection by my colleagues of the Union Shop request. If I understand their argument correctly, it is that the prohibition against membership in a dual union which is contained in the Union Constitutions, would bring a Union Shop provision in the collective agreement into conflict with subsection (2) of Section 6 of the Industrial Relations and Disputes Investigation Act. The said subsection reads:—

> (2) No provision in a collective agreement requiring an employer to discharge an employee because such employee is or continues to be a member of, or engages in activities on behalf of a union other than a specified trade union, shall be valid.

The first point to note is that this subsection is not concerned with the conditions which a union may or may not attach to membership in the organization. It is concerned only with the point that a provision in a collective agreement which requires the discharge of an employee for membership or activity in a dual union, shall not be valid. In other words, it safeguards the right of employees to change their union affiliation.

Put conversely, the subsection does not invalidate a Union Shop provision if it does not require the discharge of an employee for membership or activity in a duel union. This the union shop clause proposed in this case does not require; it excludes such a ground for discharge by expressly limiting the application of union membership as a condition of employment. It does so by the following proviso:—

> That such condition shall not apply with respect to . . . any employee to whom membership was denied or terminated for any reason other than failure of the employee to tender the periodic dues, initiation fees and assessments (not including fines and penalties) uniformly required as the condition of acquiring or maintaining membership.

Surely, if an employee is refused, or is expelled from membership because he is a member of or active in another union, he is so refused or expelled for a "reason other than failure of the employee to tender the periodic dues", etc. By the express words of the proposed clause, therefore, the condition does not apply to him. He need not in the circumstances be discharged.

The clause proposed to this Board, therefore, not only does not conflict with Section 6 (2) of the Act, but expressly meets its requirements.

The fact is that the proviso in the proposal of the Unions, quoted above, goes even further. Union constitutions provide many other grounds for disciplining members or for refusing or expelling from membership. Some are political grounds directed against communists or fascists. Some are general grounds, such as excessive attacks on the organization, its members, or officers, or working against the welfare of the organization or its members.

None of such other grounds would bring the proposed Union Shop into operation. The proviso quoted above clearly means that if an employee is refused admission into the Union or is expelled from membership for any cause other than failure to pay the normal dues, he cannot for that reason be discharged, whether the refusal to admit or the expulsion was due to dual unionism or to any other violation of the Union constitution except the requirement to pay dues.

The Union Constitutions do not affect and are not affected by the statute or the proviso in the proposed Union Shop clause. The Union, party to the collective agreement, would continue to admit and discipline members in accordance with its constitution. But in certain cases, defined by the Act and provided for in the proposed clause, union membership would cease to be or would not become a condition of employment for the employee or employees concerned. The two things are separate in fact and, in my respectful opinion, severable in law.

In my respectful submission, therefore, there is nothing in the proposed Union Shop clause which brings it into conflict

with the law. On the contrary, the proposed clause fully meets the requirements of the law.

In any case, all a Board of Conciliation is required to do is to make a recommendation. In doing so, it can amend or alter any proposal made by either side. Therefore, even if any doubt remained on the point discussed above, the Board was at liberty to point out the problem and suggest a solution. It would surely not be difficult to incorporate into the collective agreement the precise words of Section 6 (2), notwithstanding anything contained in the constitutions of the seventeen unions concerned.

On the question of the check-off of dues, the Railways made much of the inconvenience and cost. One cannot be impressed by these arguments. The Railways informed the Board that they now make numerous deductions for government, "for relatively small groups" and "for commercial companies" although in the case of the latter the Railways are compensated for the work involved. I have not been able to find it on the record, but my impression is that someone suggested that the deductions in some cases number over sixty or seventy. In view of all this, it is surely not much to ask the Railways that they co-operate with their unions in checking off membership dues.

I am, therefore, glad to agree with my colleagues in their recommendation for a check-off of union dues. However, I must emphasize again that, in my view, a voluntary check-off is a totally inadequate form of union security for the industry and Unions concerned in these proceedings.

Conclusions

The recommendations of this Minority Report may be summarized as follows:—

(1) An increase to non-operating employees of ten per cent of their present wages plus an additional 13 cents per hour across the Board, effective as of September 1, 1952 (the last agreement having expired on August 31).

(2) A cost-of-living escalator clause providing for quarterly adjustments and based on a formula to be worked out by the parties on the basis of the new Consumers' Price Index.

(3) Provisions for the Union Shop and check-off of union dues in the terms of the clauses proposed by the Unions.

Dated this 24th day of November, 1952.

Respectfully submitted.

(Sgd.) David Lewis.

Report of Board in Dispute between

McCabe Grain Company Limited (Shamrock Elevator and Feed Mill, St. Boniface)

and

Local 105, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America

In this dispute the employer is McCabe Grain Company Limited and the employees are those employed in the Shamrock Elevator and Feed Mill located at St. Boniface, Manitoba. This is a relatively small part of the operations of the company which is a large grain company. The number of employees varies from approximately twelve to twenty-four depending on the season.

The union was certified as bargaining agent for these employees on November 16, 1951. During the course of the hearings before this Board, however, it appeared that the union had previously been certified as bargaining agent in the company's seed plant which is located in St. Boniface near the Shamrock Elevator and Seed Mill. It appears that the company and the union did negotiate and sign an agreement covering these other employees. When this fact was communicated to the Board the company indicated that if the parties were permitted to resume direct negotiations an agreement might be consummated on a similar basis to the agreement in effect between the same company and the same union in their seed plant. The Board agreed and in fact encouraged the resumption of direct negotiations. However, it

appears that the parties have not yet been able to arrive at an agreement and it is necessary for the Board to formulate a report.

The basic issues in dispute between the union and the company are union security and rates of pay and those matters relating directly to wage rates.

It is the considered opinion of the Board that the agreement consummated between these two parties in their seed division should constitute the basis of agreement between the same parties in the Shamrock Elevator and Feed Mill except for the following clauses:—

1. *Hours of Work and Overtime*

(a) Forty-four (44) hours shall constitute a standard work week, consisting of eight (8) hours per day, from Monday to Friday inclusive, and four (4) hours on Saturday. (We understand that the forty-four (44) hour week is now in effect.)

(b) Overtime shall be paid after eight (8) hours in any one day at the rate of time and one-half from Monday to Friday inclusive, and at the same rate after four (4) hours on Saturday.

2. *Wages*

Rates of pay for work performed in the standard day shift shall be as follows:—

General Labour starting rate ·88½ cents per hour plus 5 cents C.O.L.B.

General Labour after 60 days ·98½ cents per hour plus 5 cents C.O.L.B.

With regard to the other classifications of employees, we recommend that the existing differential between the various jobs be maintained.

In addition to the foregoing rates the company should pay a variable cost-of-living bonus of ·25 cents per point per week for each point rise in the official Cost-of-Living Index in excess of 185·0. It is understood that no reduction shall be made below the index floor of 185·0.

It will now, of course, be necessary to adjust the Cost-of-Living bonus to the new consumer index.

3. *Union Security*

In view of the fact that this is the first agreement between these parties we cannot recommend an advanced form of union security. However, we do think that some form of union security should be granted at this time and would recommend a voluntary revocable check-off.

4. *Retroactivity*

The standard rates of pay as recommended shall be effective the same date that the Agreement is considered effective. However, no other clause in the Agreement shall be deemed to have a retroactive effect.

We understand that actually some of the above recommendations have been implemented by the company and are now in effect. The main factor therefore, which has been keeping this matter open is that no agreement has yet been signed. We feel very strongly that in the interest of harmonious labour relations in the plant this should be done without delay. Negotiations have been carried on for approximately one year in respect of a relatively small group of employees. On the part of the employer this has necessitated the attention from time to time of three or four company executives and the amount of time which has been spent in these negotiations cannot possibly be measured. From the Employees' point of view there is always a certain feeling of insecurity in the knowledge that negotiations are pending and that no agreement is in effect. The object of the Industrial Relations and Disputes Investigation Act is basically to promote harmonious relations between employers and employees and with this end in view to provide machinery leading to the consummation of collective agreements between the parties. From the employees' point of view the execution of an agreement has great importance as it means the recognition of the right of the union to bargain for them and to carry on its legitimate activities

On November 30, 1952, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between the McCabe Grain Company Limited (Shamrock Elevator and Feed Mill, St. Boniface) and Local 105, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., June, 1952, p. 756).

The Board was composed of H. G. H. Smith, QC, Chairman, who was appointed by the Minister on the joint recommendation of Clarence D. Shepard, QC, and Léon Mitchell, who had previously been appointed on the nominations of the company and union respectively. All members of the Board reside in Winnipeg.

The text of the Board's report is reproduced herewith.

in their interest. Until such an agreement is entered into therefore, there is always a certain feeling of insecurity as mentioned above and this feeling is not conducive to the best employer-employee relations in the plant. From the employer's point of view, as we have pointed out above, the longer negotiations are protracted the more time is taken which in itself does not tend towards the most satisfactory relationships in the plant. For these reasons we feel that it is to the mutual interest of the employer and the union to consummate an agreement without delay so that the irritations which are bound to exist may be removed. Actually the parties are practically in agreement in principle and it is our considered opinion that the situation should be reduced to writing as soon as possible.

All of which is respectfully submitted.

(Sgd.) H. G. H. Smith,
Chairman.

(Sgd.) C. D. Shepard,
Member.

(Sgd.) Léon Mitchell,
Member.

Report of Board in Dispute between

Keystone Transports, Limited, Montreal
and
Canadian Merchant Service Guild, Inc.

On November 20, 1952, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Keystone Transports, Limited, Montreal, and Canadian Merchant Service Guild, Inc. (L.G., Nov., 1952, p. 1467).

The Board was composed of Prof. B. S. Keirstead, Chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, John Bumbray, QC, and M. Swerdlow, who had previously been appointed on the nominations of the company and union respectively. All members of the Board reside in Montreal.

The text of the Board's report is reproduced herewith.

The Hon. Milton F. Gregg,
Minister of Labour,
Ottawa, Ont.

In the matter of the Industrial Relations and Disputes Investigation Act and dispute affecting Canadian Merchant Service Guild, Inc., applicant, and Keystone Transports, Limited, respondent.

Sir:

I have the honour to present the report of the Board of Conciliation appointed in the above case. The Board held the following meetings: Oct. 22, Oct. 24, Oct. 25, Oct. 31, Nov. 4, Nov. 7, Nov. 15 and Nov. 20.

The issues between the parties were as follows:—

(a) The Guild wished recognition in the wording of the contract that overtime was worked by deck officers employed on the Company's ships. The Company refused such recognition on the grounds that deck officers were professional employees who worked by the month, not by the standard day.

(b) The Guild wished a total compensation at the end of the navigation season of 45 days pay in lieu of leave, overtime, extra services, etc. The Company were willing to pay a total of 34 days pay in lieu of leave, extra services, etc.

After hearing evidence, the Board encouraged the two parties to re-open collective bargaining, under the auspices of the Board, which attempted to play an appropriate conciliatory role. This was done. Eventually the two parties reached the point where the Guild offered to accept 40 days compensatory pay and to drop any reference in the wording to overtime, and the Company offered 37 days, without reference to overtime. The Board suggested the figure of 38 days, and had reason to believe that this figure would be accepted by both parties. However, the Company subsequently refused to concede 38 days, and even withdrew its offer of

(Continued on page 121)

Collective Agreements and Wage Schedules

Recent Collective Agreements

Welfare plans providing for life insurance, sickness and accident, hospitalization, medical or other benefits are contained in five of the agreements summarized in the accompanying article. In each case the employer pays the whole or part of the premium.

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized here. Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in a separate article following this.

Mining

Metal Mining—*Kimberley and Chapman Camp, B.C.—The Consolidated Mining and Smelting Company of Canada Limited and the International Union of Mine, Mill and Smelter Workers, Local 651.*

Agreement to be in effect from June 1, 1952, to May 31, 1953, and thereafter, subject to 2 months' notice. This agreement is similar to the one between the company's plant at Trail, B.C., and Local 480 of the union, summarized below under "Manufacturing", with the following classifications and the corresponding basic hourly wage rates added: barman $1.97½, electric shovel operator $1.88½, chief flotation operator $1.84, miner-timberman $1.79½.

Manufacturing

Clothing—*Toronto, Ont.—National Garment Manufacturers Association (Men's Utility Clothing, Sportswear, Etc.) Representing Certain Firms and the United Garment Workers of America, Local 253.*

Agreement to be in effect from May 1, 1952, to April 30, 1953, and for a further term of one year, subject to 30 days' notice.

Union security: closed shop. The manufacturers will engage workers directed to them by the union in response to their request. If the union fails to provide the required help within 48 hours, the manufacturers may engage such help from the open market.

Check-off: irrevocable check-off of union dues.

Hours: 40 per week—Monday through Friday between 8 a.m. and 5 p.m. *Overtime:* time and one-half for work done during periods other than the above. In the slack period, when there is not sufficient work for all employees, the available work shall be divided as equally as possible among the employees.

Statutory holidays: 6 specified *paid* and 2 unpaid holidays will be observed. Time and one-half will be paid for work on one unpaid holiday and double time and one-half for work on 2 paid holidays. No employee shall be required to work on the other 4 paid and one unpaid holidays. New employees, who are not members of the union, must work for the firm for 6 weeks before being eligible for holiday pay.

Vacation pay amounting to 2·5 per cent of gross earnings will be granted to employees after 3 months' service; after 3 years' service employees will receive 4 per cent of gross earnings. Union members transferring from one shop, party to this agreement, to another are to receive vacation pay without a 3-months employment period.

Wages: both piece-work and time-work rates are increased by 5 cents per hour over the previous rates. Trainees and beginners will start at 60 cents per hour, this rate to be increased to 65 cents at the end of 30 days' employment and to 70 cents per hour after 3 months' employment. Where piece-work rates prevail, a worker is to be placed on piece work as soon as he is able to earn more than hourly rates provide. In the event of an increase or decrease in the cost of living either party has the right to open the wages part of the agreement on March 1 and September 1, any wage changes agreed upon to become effective May 1 or November 1.

The manufacturers agree not to engage in the practice of "contracting" their work to others.

Welfare fund: up to April 30, 1952, manufacturers were contributing 1·5 per cent of their payroll to the United Garment Workers' Welfare Fund; "thereafter with the consent here given by both parties to this agreement, a moratorium is declared for a period of one year, expiring April 30, 1953. However, if deemed necessary by the Board of Directors of the Welfare Fund, the matter of the moratorium may be referred to the Union and the Association of Manufacturers in writing for further consideration or changes".

Seniority shall prevail in case of lay-offs, shop stewards to retain top seniority.

Provision is made for the *settling of disputes* and for the establishment of a *special committee* to investigate and make recommendations in the matter of prices on garments and homework.

Furniture—*Toronto, Ont.—The Toronto Upholstered Furniture Manufacturers Association Incorporated and the Upholsterers' International Union of North America, Local 30.*

Agreement to be in effect from March 29, 1952, to September 15, 1953, and thereafter from year to year, subject to 30 days' notice. However, the question of wages may be re-opened for discussion should conditions warrant such re-opening.

Union security: closed shop. The employer agrees to employ only union members in good standing. The union will be notified whenever additional workers are required. Should the union be unable to supply such workers within 24 hours, the manufacturer may hire workers from any other source, but such new workers must immediately join the union.

Check-off: compulsory for all eligible employees after they have worked the probationary period of 4 weeks.

Hours: 8 per day Monday through Friday, a 40-hour week. Labourers may work an additional hour per day at the regular rate, provided such hour is spent in cleaning up or in performing other duties to meet fire insurance requirements. *Overtime:* time and one-half for work in excess of 40 hours per week; double time and one-half for work on 8 (previously 7) specified *paid holidays*. If overtime is necessary, permission from the union is required in advance. A firm shall not hire extra help unless the present staff cannot fill the required order by working 6 hours overtime per week. During the slack period there will be equal division of work. No working partner shall perform work in the shop while the worker who regularly performs such work is laid off or is working part time.

Rest periods: employees will be allowed two 15-minute rest periods a day.

Vacations with pay: after 3 months' continuous service one week, after 3 years' service 2 weeks. However, employees with less than one year's service, who are granted one week, must sign a statement that they will continue in the employ of the firm up to December 31 of the year in which they receive their vacation. Should they leave their job without the manufacturers' consent they shall only be entitled to 2 per cent of their earnings.

Hourly wage rates: upholsterers, seatmakers, trimmers, cutter in charge of cutting department $1.40; operators, cutters, springers, cushion fillers, polishers, assemblers with one or more years' experience $1.30; labourers, first 3 months 95 cents, thereafter $1; labourers who have been receiving a 10 cent cost-of-living bonus shall continue to receive same; learners, under 18 years of age 48 to 68 cents, over 18 years of age 63 to 83 cents.

Escalator clause: in addition to the above rates employees will be paid a cost-of-living bonus of 25 cents per week for every point increase in the cost of living since September 1, 1948, as reported by the Dominion Government. Adjustments will be made downward on the same basis.

Welfare plan: the employer agrees to pay towards the Upholsterers' International Union Social Security Plan an amount equal to 3 per cent of the payroll.

Provision is made for *grievance procedure*.

Printing and Publishing—*Truro, N.S.—The Truro Printing and Publishing Company Limited and International Printing Pressmen and Assistants' Union of North America, Local 551.*

Agreement to be in effect from September 10, 1952, to September 9, 1953, and thereafter, subject to 60 days' notice.

Union security: closed shop.

Hours: 8 per day Monday through Friday, 4 on Saturday, a 44-hour week. If it becomes necessary to employ a night shift, the hours for same shall be 8 per shift Monday through Friday, a 40-hour week. *Overtime:* time and one-half for the first 4 hours of work performed before or after the regular day or night hours, double time thereafter and for work on any Sunday or statutory holiday. Six (previously 3) specified holidays will be *paid holidays*.

Vacations with pay: after one year's service one week, after 2 years' service 9 working days, and after 3 years' service 2 weeks. One month's sickness will be allowed per year before pay for annual vacations will be affected.

Hourly wage rates: binderymen, pressmen, compositor, monotype from 43 cents during first 6 months to $1.13½ after 10th 6 months; monotype keyboard from 43 cents to 91½ cents after 7th 6 months; press assistant (feeder) from 43 cents to 86½ cents after 6th 6 months; platen feeder, proof reader, proof corrector from 37½ cents to 70 cents after 6th 6 months; bindery girls from 37½ cents to 59½ cents after 4th 6 months. (The above rates represent increases of 8 per cent over the previous rates.) Men-in-charge will receive a differential of not less than 10 per cent of the journeymen's rate.

Night shift differential: employees on the night staff will be paid a differential of 10 per cent of the regular daily rate.

Seniority: in cases of lay-offs, rehiring and promotion the personnel involved shall be agreed upon between the departmental foreman and the company; in all cases seniority shall be taken into consideration.

Provision is made for *grievance procedure* and the setting up of a *Labour-Management Committee*.

Automobiles — *Windsor, Ont. — Chrysler Corporation of Canada Limited and the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, Local 195.*

Agreement to be in effect from June 17, 1952, to June 17, 1954, and thereafter from year to year, subject to notice. Either party shall be entitled to re-open the agreement once, after June 17, 1953, on the general level of wage rates only. This agreement is similar to the one previously in effect (L.G., Jan., 1951, p. 60), with the following changes:—

Overtime at the rate of time and one-half is now paid for work on both Saturdays and Sundays (previously only for work on Sundays).

Vacations with pay: vacation payments are increased for employees with 10 and more years' seniority: after 10 years' service employees will now be paid 2½, and after 15

years' service 3, weeks' vacation pay. (Previously all employees with 5 or more years' seniority received 2 weeks' vacation pay.)

Wage rates for the various classifications are not given in the agreement. According to press reports employees received a general increase of 4 cents per hour with an additional 8 cents per hour granted to tool, die and maintenance classifications.

Welfare plans: effective as of June 15, 1952, the life insurance is increased from $3,000 to $3,600 and the sickness and accident insurance from $21 to $28 weekly benefit.

Automobiles — *Windsor, Ont. — The Ford Motor Company of Canada Limited and the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, Local 240 (Office Employees).*

Agreement, following strike (L.G., Aug., 1952, p. 1157), to be in effect from June 2, 1952, to June 2, 1954, and thereafter from year to year, subject to notice.

Check-off: the company agrees to deduct from the pay of every employee in the bargaining unit covered by this agreement, who so authorizes, the regular monthly membership dues and to remit same to the union. The authorization may be revoked on June 2 in any year hereafter on 15 days' notice.

Hours: 8 per day 5 days a week, a 40-hour week.

Statutory holidays: salaried employees will be paid one and one-half times their equivalent hourly rate for work on 7 specified holidays and hourly rated employees double time and one-half for work on 6 specified *paid holidays.*

Vacations with pay: salaried employees who were on the active roll of the company as of December 1 of the preceding year will be granted 3 weeks if they had 15 or more years' seniority, and 2 weeks if they had less than 15 years' seniority, as of that date. An employee who was not on the active roll as of December 1 of the preceding year, but who was so as of June 1 of the current year, shall be entitled to one week. Hourly rated employees with one and less than 3 years' seniority will be granted one week, those with 3 or more but less than 15 years' seniority 2 weeks and employees with 15 or more years' seniority 3 weeks, provided in each case that the employee has worked at least 200 days during the preceding year. If he has worked less than 200 days, he will be entitled to vacation pay amounting to 2, 4 or 6 per cent of his actual earnings during the preceding year, depending on the number of years of seniority he has to his credit.

Wages: salaried employees will receive an increase of $5.20 per month and hourly rated employees of 3 cents per hour, effective June 15, 1952; further increases of the same amounts will be granted effective June 15, 1953, all such increases to be added to the base rate.

Escalator clause: all employees shall be paid a cost-of-living allowance on the following basis: for every 1·3 point rise in the Dominion Bureau of Statistics' cost-of-living index above 164 salaried employees will be granted an allowance of $1·733 per month and hourly rated employees an allowance of one cent per hour. Adjustments will be made quarterly, upwards or downwards, but in no event will a decline in the index below 164 provide the basis of a reduction in the salary or wage scale. Employees were granted a cost-of-living increase of $8.66 per month for salaried employees and of 5 cents per hour for hourly rated employees September 1, 1950, and one of $5.20 per month or 3 cents per hour March 1, 1951. Based on the above formula, the agreement provides for further cost-of-living allowances of $8.66 per month or 5 cents per hour effective June 1, 1951, of $10.40 per month or 6 cents per hour effective September 1, 1951, and of $1.74 per month or one cent per hour effective December 1, 1951, bringing the total cost-of-living allowances up to $34.66 per month for salaried employees and to 20 cents per hour for hourly rated employees for the period when the cost-of-living index stood between 190·0 and 191·2.

Provision is made for *seniority rights* and *grievance procedure.*

Metal Products—*Oshawa, Ont.—Fittings Limited and United Steelworkers of America, Local 1817.*

Agreements to be in effect from May 1, 1952, to April 30, 1953. Notice of termination or of proposed revision may be given during March 1953, and negotiations upon any such proposal shall take place not later than the first week of April 1953. Any provision not so terminated or proposed to be revised is to remain in force pending such negotiations.

Check-off: the company will deduct the amount of monthly union dues and special assessments from the pay of all employees eligible to be members of the union and remit same to the union.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work in excess of 8 hours per day and for any work on Saturdays and Sundays, provided that if on any one week-day more than 4 hours overtime is worked such overtime will be paid for at double time; double time and one-half for work on 8 specified *paid holidays.*

Rest and wash-up periods: the prevailing rest period will be observed. Employees will be allowed a 5-minute wash-up period prior to the end of the mid-shift and at the end of the shift.

Vacations with pay: after 3 months' service one week, after 3 years' service 2 weeks with pay on the basis of 2 per cent and 4 per cent, respectively, of an employee's gross earnings during the preceding year.

Hourly wage rates for certain classifications: foundry division—patternmakers $1.42 to $1.70; moulders $1.40 to $1.50, learners $1.28 to $1.31; lathe hands, miller hands $1.36 to $1.50; melter $1.38 to $1.44, crane operators $1.28 to $1.43, furnace repair $1.36 to $1.38, tap man $1.32 to $1.37, skimmer $1.28 to $1.37; sand mixers, board men, mould dump off, oventender, sorting and inspection, fork lift truck, general labour $1.28 to $1.31; maintenance division —fitters $1.50 to $1.70; mechanical maintenance $1.32 to $1.49, helpers $1.28 to $1.31; stationary engineers $1.28 to $1.54, carpenter $1.32 to $1.39, painter $1.28 to $1.38, welder $1.38 to $1.49, electricians $1.42 to $1.59, improver $1.37 to $1.42, helper $1.22 to

$1.36; machine division—bench hands $1.50 to $1.70, setting up taps and dies $1.38 to $1.42, setting up machines $1.22 to $1.32; machine production, adults $1.22 to $1.27, juniors 99 cents to $1.16; juniors and females to start at 99 cents and to receive an increase of 2½ cents per hour every 6 months until the rate of $1.16 has been reached. (The above rates are 6 cents per hour higher than the previous rates. Piece-workers are granted an increase in their hourly earnings of 4 cents per hour.)

Off-shift differential: employees required to work night or swing shifts will be paid a shift premium of 10 per cent on their earned pay amount. For shifts beginning after 12 noon the night premium will be paid starting at 4 p.m. and for shifts beginning before 12 noon starting at 6 p.m. When night operations cease rates will return to regular schedules. In the case of swing shifts the 10 per cent premium will be paid beginning with the start of shift.

Welfare Plan: forming part of the agreement is a Welfare Plan which provides (a) life insurance of $1,500 for men and $1,000 for women—total cost to be borne by the employer; (b) sickness and accident benefits of $25 per week for men and $20.50 for women—total cost to be borne by the employer; and (c) a combined plan including the Blue Cross Plan for hospitalization benefits and the Physicians' Services Incorporated Plan for medical, surgical and obstetrical care—the cost to be borne equally by the individual employee and the employer.

Seniority: other things being equal, seniority shall operate on a departmental basis. Lay-offs and re-employment will be based on length of service.

Provision is made for *grievance procedure* and the *safety and health* of employees.

Metal Products—*Toronto, Ont.—The Canada Metal Company Limited (Toronto Division) and International Chemical Workers Union, Local 453.*

Agreement to be in effect from June 2, 1952, to June 1, 1953, and thereafter from year to year subject to notice.

Check-off: voluntary but irrevocable.

Hours: 8 per day 5 days a week, a 40-hour week (previous agreement provided a 44-hour week). *Overtime:* time and one-half for work in excess of an employee's regular daily hours, provided the employee works his full scheduled work week; double time and one-half for work on 8 specified *paid holidays*.

Rest and wash-up periods: all employees, except shift workers, will be granted one 10-minute rest period in the forenoon and one 5-minute wash-up period before noon.

Vacations with pay: after one year's service one week, after 2 years' service 2 weeks, after 15 years' service 3 weeks and after 25 years' service 4 weeks. Employees with less than one year, but more than 3 months of service will be entitled to one week, with pay equivalent to 2 per cent of their earnings. (Previous agreement provided for one week after one year, 2 weeks after 2 years, and 3 weeks after 25 years of service.)

Hourly wage rates for certain classifications: oxide, mixed metal, dross departments—lead hands $1.45½ to $1.55½, No. 1 operators $1.41 to $1.44½, No. 2 operators $1.16 to $1.40; maintenance department—machinists $1.37 to $1.67, tradesmen $1.37 to $1.62, lead hand $1.52 to $1.62, maintenance men $1.42 to $1.55½; foundry and bushing department—lead hand $1.78 to $1.87, floor moulders $1.55½ to $1.77½, machine moulders $1.37 to $1.66½, pit fire lead hand $1.50 to $1.55, pitman $1.44½ to $1.49; cleaners—lead hand $1.45½ to $1.55½, dresser finishers $1.38½ to $1.50. The above rates include a general increase of 21 cents per hour granted to all hourly rated employees. Five cents per hour of this increase shall be retroactive to date when the 40-hour week was inaugurated in the different departments.

Shift differential: employees will receive a shift bonus of 6 cents per hour for work on the 3 p.m. to 11 p.m. shift and a bonus of 8 cents per hour on the 11 p.m. to 7 a.m. shift (an increase of 3 cents per hour in either case over the previous shift differential).

Seniority: it is mutually recognized that skill, ability, efficiency and good conduct are related to seniority standing. The seniority of an employee shall be considered in determining lay-offs, re-hirings, transfers and upgradings. Seniority shall be on a departmental basis; however, in the event of a lay-off due to a reduction of work or discontinuance of operations employees having a seniority standing of 18 months or more will receive plant-wide seniority privileges.

Provision is made for *grievance procedure*, an *apprenticeship plan* and *a Union-Company Safety Committee*.

Metal Products—*Trail, B.C.—The Consolidated Mining and Smelting Company of Canada Limited and the International Union of Mine, Mill and Smelter Workers, Local 480.*

Agreement to be in effect from June 1, 1952, to May 31, 1953, and thereafter, subject to 2 months' notice.

Check-off: as a result of a majority decision of a Mediation Committee headed by Hon. Gordon McG. Sloan, Chief Justice of British Columbia, the company is obligated to deduct, effective from June 1, 1951, from the pay of each employee, as a condition of his continued employment, the sum of $2 per month and remit same to the union. Under the terms of the present agreement, Hon. G. McG. Sloan will be asked whether it was his intent that any increase in union dues be deducted from the pay of non-union members and both parties agree to be bound by his decision. Each employee from whose pay the above amount ($2 or "a sum equivalent to union dues" depending on the decision of the Chief Justice) is deducted shall have the right to vote as if a member of the union in good standing at any election of local officers of the Union. Initiation fees, special union assessments and union dues in excess of the $2 (if any and subject to the decision of the Hon. G. McG. Sloan) will be deducted by the company from the pay of employees who so authorize; such authorization may be revoked at any time.

Hours: the regular working week shall constitute 40 or 42 hours or the equivalent. *Overtime:* time and one-half for work in excess of 8 hours in any one day and for

work on an employee's regularly assigned days off duty; double time and one-half for work on 7 specified *paid holidays* (previously double time for work on 6 paid holidays).

Vacations with pay: after one year's service one week, after 2 years' service 2 weeks and after 20 years' service 3 weeks. Employees with less than one year's service shall be entitled to a vacation, not exceeding one week, with pay amounting to 2 per cent of wages earned during the previous year. For each period of 30 consecutive days an employee is absent from work during the year, without proper cause, there shall be deducted from the vacation pay to which he would otherwise be entitled one-twelfth of such pay.

Hourly wage rates: steam engineer, second class $1.93, third class $1.79½, toolmaker $1.92½, melter $1.88½, journeyman tradesman $1.88, journeyman operator $1.84, painter $1.79½, repairman, chief operator, special $1.79½, first class $1.75, second class $1.70½; operator, special $1.66, first class $1.61½, second class $1.57; helper $1.52½, labourer $1.48. (The above rates represent an increase of 10 cents per hour, except for tradesmen who were granted an increase of 14 cents per hour.)

Shift differential: a premium of 5 (previously 4) cents per hour will be paid for work on the afternoon shift and of 10 (previously 8) cents per hour for work on the night shift.

Provision is made for a *Safety and Industrial Hygiene Committee*, *seniority rights* and *grievance procedure*.

Chemical Products—*Beauharnois, P.Q.—Dominion Tar and Chemical Company Limited (Dominion Alkali and Chemical Company Limited) and International Chemical Workers Union, Local 379.*

Agreement to be in effect from May 15, 1952, to May 15, 1953, and thereafter from year to year, subject to notice.

Check-off: voluntary but irrevocable.

Hours: for day workers—8 per day Monday through Friday, 4 on Saturday, a 44-hour week; for shift workers—42 per week on the basis of a 7-day operation consisting of 8-hour shifts averaged over a 4-week period. *Overtime:* time and one-half for work in excess of the regularly scheduled hours in any one day or in any one week and for work on Sundays, except where such work is part of the regularly scheduled shift; double time for work on 7 specified *paid holidays*. Employees required to work 2 or more hours overtime without notice at least 2 hours prior to the beginning of their regular shift shall be given a meal allowance of $1 for the period from 2 to 4 hours overtime and an additional 50 cents for any part of each additional 4-hour period of overtime.

Vacations with pay: after one year's continuous service one week, after 3 years' continuous service 2 weeks; employees with less than one year's service will be granted one-half day for each complete month of service.

Hourly wage rates: production department—operator $1.52, rectifier operator $1.47, operator helper "A" and mercury recovery man $1.42, operator helper "B" $1.31, stationary engineer $1.61, cell reconditioning (lead hand) $1.47, cell reconditioner $1.31; tank car reconditioner $1.52, helper $1.42; maintenance department—chief tradesman, stationary engineer $1.61, bulldozer and trackmobile operator $1.54; tradesman "A" $1.54, "B" $1.47, "C" $1.41, helper $1.31; shift serviceman $1.52, payloader operator, fireman, stores attendant, brakeman $1.31; labourer, janitor $1.22. (The above rates are from 6 to 8 cents per hour higher than the previous rates.) A starting rate of 7 cents per hour less than the regular rate may be paid for not more than 2 months. Effective November 15, 1952, stationary engineers and chief tradesmen will be granted an increase of 2 cents, and all other employees an increase of one cent, per hour.

Off-shift differential: a premium of 5 (previously 3) cents per hour shall be paid for all regularly scheduled work performed on all shifts other than the day shifts.

Clothing: the company agrees to make available, at cost, standard working clothing in a minimum number of sizes and types and to replace or repair employees' clothing which may have been destroyed or damaged by causes beyond their control. It will also supply, free of charge, laundry service to employees working in the cell room and to any maintenance men exposed to mercury.

Seniority: departmental seniority shall be recognized for promotions and filling of vacancies and plant-wide seniority for layoffs and recall.

Provision is made for *grievance procedure* and the *safety and health* of employees.

Oil Refining—*Vancouver, B.C.—Shell Oil Company of Canada Limited (Shellburn Refinery) and the Oil Workers' International Union, Local 596.*

Agreement to be in effect from September 1, 1952, to August 31, 1953, and thereafter, subject to two months' notice. This agreement is similar to the one previously in effect (L.G., Nov., 1951, p. 1533) with the following changes:—

Hourly wage rates are increased by 6½ per cent. For cleaning or doing repair work inside certain specified pieces of uncleaned refinery equipment employees will now be paid the regular rate plus 10 cents per hour instead of $1.45½ or the regular rate plus 5 cents per hour, as previously.

Night-shift differential: employees will now receive 7 (previously 5) cents per hour for work between 4 p.m. and 12 midnight and 14 (previously 8) cents per hour for work between 12 midnight and 8 a.m.

Transportation and Public Utilities

Transport Drivers—*Province of Quebec—The Automotive Transport Association of the Province of Quebec and the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local 106.*

Agreement to be in effect from October 1, 1952, to September 30, 1953, and thereafter from year to year, subject to 2 months' notice.

Union security: maintenance of membership for all union members as of March 23, 1949.

Check-off: the company agrees to deduct monthly union dues from the pay of any eligible employee who so authorizes. All employees hired on or after March 23, 1949, shall, as a condition of employment, authorize the company to deduct such union dues.

Hours: 10 per day Monday through Friday, 5 on Saturday, a 55-hour week. The starting and stopping hours shall be mutually agreed upon between the employer and the union representatives and shall not be varied except with the consent of both parties. *Overtime:* time and one-half for the first 6 hours of work in excess of the standard working hours in any one shift; double time thereafter and for work on Sundays and on 6 specified holidays, 5 of which are *paid holidays.* Effective February 1, 1953, time and one-half will be paid for all work in excess of 10 hours Monday through Friday and after 5 hours on Saturday or for work in excess of 50 hours per week.

Vacation with pay: employees with less than 3 years' continuous service shall receive a vacation with pay calculated at 2 per cent of the wages earned; employees with 3 or more years of continuous service shall receive 2 weeks' vacation with pay calculated at 4 per cent of their total earnings during the year in which they earned their vacation.

Wages: for wage rates see under "Truck Drivers, Montreal" in the article "Collective Agreement Act Quebec" below (p. 98). The rates for employees at branches of the companies located outside of the Metropolitan area of Montreal shall be 5 cents per hour lower than the rates for their respective classifications in the Montreal zone.

Welfare plan: the employer shall pay the sum of $3.50 each calendar month for each eligible employee who has worked a minimum of 80 hours during that month, to cover the following benefits: (a) loss of life, natural death $2,000, accidental death $3,000, dependents up to $500; (b) dismemberment up to $1,000; (c) loss of time, general helpers $25 others $30 (per week); (d) hospital benefits, room and board up to $5 per day, other hospital charges up to $100, ambulance up to $10; (e) surgical benefit, maximum reimbursement $200; (f) medical benefit, per visit (at hospital) $3; (g) polio benefit, maximum reimbursement $2,500.

Seniority: in promotions, lay-offs and re-hiring: (a) length of continuous service; (b) ability, qualifications and skill, and (c) family responsibilities will be considered in the order named. The union representatives shall receive favourable consideration as to seniority in the event of a lay-off due to lack of work.

Safety: a safety campaign will be immediately inaugurated; the union agrees to provide an educational course for its members to develop safety.

Provision is made for *grievance procedure.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the repeal of one agreement and the amendment of six others, all summarized below.

A request for the amendment of the agreement for retail stores at Roberval was published in the *Quebec Official Gazette* of October 25; another request for the amendment of the agreement for barbers and hairdressers at Rouyn and Noranda was gazetted October 31. Requests for the amendment of the agreements for the building trades (elevator construction section), for millinery workers and for the sheet metal fabrication industry at Montreal, as well as for the clock and watch repair industry in some cities and towns of the province were gazetted November 8. Requests for the amendment of the agreements for truck drivers, for the building trades and for hospital and charitable institution employees at Quebec, as well as for the printing industry at Montreal were all published in the issue of November 15.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties to certain agreements.

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Ladies' Cloak and Suit Industry, Province of Quebec

An Order in Council, dated November 6, and gazetted November 15, amends the previous Orders in Council for this industry (L.G., Aug., 1949, p. 987; Jan., 1950, p. 77; April, 1951, p. 543, and previous issues). Amendment to be in effect from July 1, 1952.

Vacation: after one year of continuous service, every employee is entitled to an annual vacation of 2 weeks with pay instead of one week as formerly; an employee with less than one year's service is entitled to as many whole working days (previously ½ days) as his number of months of continuous service. If an employee's service is terminated, for any reason, before a year of continuous service, he will receive, in lieu of vacation with pay, a sum equal to 4 per cent (previously 2 per cent) of the wages earned by him during that portion of the year of continuous service spent in the employ of his employer between July 1 and June 30.

Men's and Boys' Shirt Manufacturing Industry, Province of Quebec

An Order in Council, dated November 6, and gazetted November 15, amends the previous Order in Council for this industry (L.G., Feb., 1952, p. 178).

Industrial jurisdiction: as previously in effect this agreement applies to all employers engaged in manufacturing fine, sports, military and night shirts, as well as underwear and pyjamas, for men and boys over 14 years of age. It does not apply to the manufacture of garments already covered by an existing agreement extended under this Act. However, the present amendment now provides that effective January 1, 1953, this agreement also applies to shirts for boys of 6 to 14 years of age, and will also apply to work shirts, when in either case the manufacturing of the above garments represents at least 25 per cent of the total production of an employer in the course of the calendar year 1952, and from year to year, the same conditions applying. The present agreement, as amended herewith, does not apply to underwear of knitted fabrics, nor to shirts, pyjamas or garments of any description up to and including the age of 6 years.

Printing Industry, Montreal

An Order in Council, dated October 15, and gazetted October 25, amends the previous Orders in Council for this industry (L.G., May, 1949, p. 604; June, 1951, p. 827; June, 1952, p. 780, and previous issues). Another amendment to this agreement was published in the *Quebec Official Gazette* of June 7, 1952.

Minimum hourly wage rates: a schedule of minimum rates for apprentices forms part of this amendment as follows: apprentices (composition ruling, cutting, etc. departments)—from 53 cents per hour in first 6 months to $1.45 in second 6 months of sixth year in zone I, from 46 cents to $1.18 in bone II and from 43 cents to $1.12 in zone III; apprentices (printing shops, all presses) —from 54 cents per hour in first 6 months to $1.37 in second 6 months of fourth year in zone I, from 45 cents to $1.13 in zone II and from 40 cents to $1.04 in zone III; apprentices in fifth, sixth and seventh years on platen presses, card presses, envelope presses, etc.—$1.43 to $1.47 in zone I, $1.14 to $1.17 in zone II and $1.08 to $1.11 in zone III; apprentices in fifth, sixth and seventh years on rotary presses, flat cylinder bed presses, etc.—$1.48 to $1.64 in zone I, $1.18 to $1.42 in zone II and $1.12 to $1.29 in zone III.

The present amendment now provides for a distinction between apprentices in the press department in zone I, II and III. Apprentices of the press department in zones II and III are now governed by certain regulations previously applicable to apprentices of the composition, ruling, cutting, etc. departments, only. Other provisions of this amendment include the revision of regulations applicable to the industrial jurisdiction of this agreement.

Garages and Service Stations, Rimouski

An Order in Council, dated October 15, and gazetted October 25, amends the previous Orders in Council for this industry (L.G., Jan., 1950, p. 78; Aug., 1951, p. 1108). Agreement to remain in effect until April 13, 1953, and thereafter from year to year, subject to notice.

Hours: regular working hours are reduced from 10 to 9 per day and from 60 to 54 hours per week. Working hours are now distributed between 7 a.m. and 9 p.m. Monday through Saturday instead of between 7 a.m. and 11 p.m. Monday through Friday and on Saturday between 7 a.m. and 6 p.m., as previously. Shift work provisions are included as formerly.

Overtime: time and one-half for all time worked beyond 9 p.m. Monday through Saturday or for work in excess of 9½ hours per day or 55 hours per week; time and one-half for work on Sundays and holidays when 3 or less service stations are open, double time when more than 3 are open. (Previously time and one-half for work in excess of 60 hours per week; double time for work on Sundays in accordance with the provisions of the Weekly Day of Rest Act to all employees except servicemen who were paid their regular rate plus 10 per cent.)

Minimum hourly wage rates: mechanic, fitter, machinist, electrician, bodyman, wheelwright, welder, painter, upholsterer, glazier, vulcanizer—class "A" $1.25, class "B" $1.10, class "C" 90 cents per hour; service men and apprentices from 50 cents per hour in first year to 85 cents in fourth year. (The above rates are from 10 to 25 cents per hour higher than those previously in effect.) Minimum rates for spare parts clerks (previously stock room clerks) are now 95 cents per hour for class "A", 85 cents for class "B"; apprentices from 50 to 75 cents per hour. (Previously stock room clerks were paid 73 cents per hour for class "A", 59 cents for class "B", 49 cents for class "C", 33 cents and 39 cents per hour in first and second years respectively.) Minimum rates and classes of apprentices and spare parts clerks are limited in proportion to the total number of such workers employed in an establishment. Higher wages than the minimum rates fixed in the present agreement will not be reduced in any way for the duration of this agreement.

Cost-of-living escalator clause published in the LABOUR GAZETTE of August 1951, is not included in this amendment.

Vacation: in addition to one week with pay after one year of continuous service, previously provided for, employees are now entitled to a second week with pay after 5 years of continuous service. However, it is provided that although the first week will be given between April 1 and November 1 of the current year (date to be fixed by the employer), the second week (at the option of the employer), may be given at any time of the year, or that remuneration equal to one week's wages or 2 per cent of the wages earned by the employee during the current year (12-month period ending April 1) may be given in lieu thereof.

Transportation and Public Utilities

Truck Drivers, Montreal

An Order in Council, dated November 6, and gazetted November 8, amends the previous Orders in Council for this industry (L.G., Sept., 1948, p. 995; Aug., 1949, p. 989; April, 1951, p. 547; Feb., 1952, p. 179).

Overtime: effective from February 1, 1953, time and one-half will be paid for all work in excess of 10 hours per day, Monday through Friday, and after 5 hours on Saturday, or in excess of 50 hours per week. Overtime allowed after 10 hours per day or 5 hours on Saturday is not to be included in calculating overtime in excess of the weekly work. Overtime rates on Saturday for furniture moving operations will be paid at the rate of time and one-half for the first 10 hours. No provision is made in this amendment for any revision of the regulations previously providing double time for work on Sundays or any of 6 specified holidays (5 of which are paid holidays).

Minimum hourly wage rates for a standard work week unchanged at 55 hours per week: junior helpers starting at 45 cents per hour are paid 50 cents after 6 months; helpers (general) from 73 cents to 83 cents after 6 months; dockmen, warehousemen, checkers from 87 cents to 97 cents after 6 months; chauffeurs, chauffeur (semi-trailer) from 88 and 93 cents to $1.03 and $1.08 respectively, after 6 months. (The above rates after 6 months for helpers (general), dockmen, warehousemen, checkers are 5 cents per hour higher than those previously in effect and the rates for chauffeurs and chauffeurs (semi-trailers) are 10 cents per hour higher; other rates are unchanged.)

Vacation: one week with pay after one year of continuous service as previously provided for. This amendment now provides for 2 weeks' vacation with pay or 4 per cent of total earnings of the year which entitles them to the vacation, after 3 or more years of continuous service. (Previously 2 weeks with pay after 3 or more years of service but the second week could be cancelled, upon mutual agreement between employer and employee, provided the employee received compensation equal to 2 per cent of wages earned.)

Other provisions include regulations governing eligibility of employees to insurance and to holidays with pay.

Longshoremen, Checkers and Coopers (Ocean and Inland Navigation), Sorel

An Order in Council, dated October 8, and gazetted October 31, amends the previous Order in Council for this industry (L.G., April 1951, p. 547). The names of 2 additional stevedoring companies are added to the list of contracting parties. The present agreement, as amended, will remain in effect until January 31, 1953, and thereafter from year to year, subject to notice.

Overtime: double time (previously time and one-half), for work done on Sundays or any of 5 specified holidays; time and one-half for work on Saturday between 1 p.m. and 6 p.m. (the last provision is added). Other overtime provisions which remain unchanged include time and one-half for work during meal hours, and double time after 6 p.m. and for work on Sundays or any of 5 specified holidays for workers engaged in the handling of explosives.

Minimum hourly wage rates: for loading grain—$1.38 for work between 7 a.m. and 6 p.m.; $2.07 for work between 7 p.m. and 6 a.m.; for unloading grain out of lake and ocean vessels into the elevator—$1.28 per hour between 7 a.m. and 6 p.m.; $1.53 per hour between 7 p.m. and 6 a.m.; for loading or unloading of cargoes not otherwise specified from or to vessels and/or railroad cars, cleaning or bunkering of vessels and erection of grain fitting—$1.33 for work between 7 a.m. and 6 p.m.; $1.99½ for work between 7 p.m. and 6 a.m.; for loading or unloading of vessels and/or railroad cars and cleaning same from sulphur, china clay, potash, cyanamid, pitch and other similar strong cargoes not including phosphates—$1.48 for work between 7 a.m. and 6 p.m.; $2.22 for work between 7 p.m. and 6 a.m.; water boy (employed on the handling of any cargo, except grain) $1.23 for work between 7 a.m. and 6 p.m., $1.84½ for work between 6 p.m. and 6 a.m. (Minimum rates shown above for work between 7 a.m. and 6 p.m. are 30½ cents per hour higher than those previously in effect; minimum rates shown above for work between 7 p.m. and 6 a.m. are from 45½ to 84½ cents per hour higher than the rates formerly in effect for work done between midnight and 6 a.m., which rates were the highest of 2 separate scales of minimum rates formerly fixed for work between 7 p.m. and midnight and from midnight to 6 a.m.

Service

Hospital and Charitable Institution Employees, Sherbrooke

An Order in Council, dated October 15, and gazetted October 25, repeals the previous Orders in Council for this service (L.G., Nov., 1944, p. 1369; July, 1946, p. 931; Jan., 1947, p. 51) from October 21, 1952.

(Concluded from page 39)

On the whole, office staffs share in the benefits won by factory personnel through collective bargaining. On the other hand, they have fewer regulations on working conditions, as these are left in most cases to the discretion of branch or department heads.

Industrial Standards Acts, etc.

Recent proceedings under the Industrial Standards Acts, etc.* include eight new schedules, and the amendment of one other, all summarized below.

NOVA SCOTIA

Construction

Carpenters, Sydney

An Order in Council, dated October 10, and gazetted October 22, makes binding the terms of a new schedule for carpenters at Sydney, to be in effect from November 1, 1952, to May 31, 1953, and thereafter until rescinded.

The terms of this schedule are similar to those which were previously in effect and summarized in the LABOUR GAZETTE of March 1951, p. 360, with the exception of the following:—

Hours are unchanged at 8 per day, 40 per week. However, it is now provided that distribution of regular hours may be arranged to conform to certain conditions, subject to mutual consent of employers and union.

Minimum hourly wage rate for journeymen carpenters is increased from $1.40 to $1.80 per hour. Apprentices' rates are increased from 71½ cents to 97 cents per hour in first 500 hours and from $1.26 to $1.63 per hour during eighth 1,000 hours. Employees required to work on scaffolds 50 feet or more will receive 5 cents per hour extra for the first 10 feet and an additional 10 cents per hour every 20 feet thereafter. (The last provision is new.)

NEW BRUNSWICK

Construction

Plumbers, Moncton

An Order in Council, dated October 23, and gazetted November 5, makes binding the terms of a new schedule for the plumbing and pipefitting trades in the zone comprising the area within a radius of 5 miles from the City Hall in the City of Moncton and including the Village of Dieppe, to be in effect from November 1, 1952, until December 31, 1952.

The terms of this schedule are similar to those which were previously in effect and summarized in the LABOUR GAZETTE., December 1951, with the exception of the following:—

Minimum hourly wage rate for work done during regular working periods is increased from $1.25 to $1.40 per hour and for work done during special working periods from $1.33 to $1.50 per hour. Weekly hours are unchanged at 44 per week.

Carpenters, Saint John

An Order in Council, dated October 23, and gazetted November 5, makes binding the terms of a new schedule for the carpentry industry within a radius of 15 miles from the County Court House in the City of Saint John, to be in effect from October 1, 1952, until June 15, 1953.

Hours: 8 per day, Monday through Friday, a 40-hour week.

Overtime: $2.18 per hour during the first 4 hours worked in excess of regular hours, or on Saturday; $2.90 per hour for all other overtime, and for work on Sundays or any of 9 specified holidays (an increase of one). (Overtime rates are unchanged from those previously in effect.)

Minimum hourly wage rate is increased from $1.37 to $1.45 per hour for work during regular working periods. Work done during special working period will be payable at the rate of 8 hours' pay for 7 hours' work.

Painters, Saint John

An Order in Council, dated October 23, and gazetted November 5, makes binding the terms of a new schedule for painters, decorators and paperhangers in the zone comprising the area within a radius of 15 miles from the County Court House in Saint John, to be in effect from October 15, 1952, until December 31, 1952.

The terms of this schedule are similar to those previously in effect and published in the LABOUR GAZETTE, April 1952, with the exception of the following:—

Minimum hourly wage rate for work done during a regular working period is increased from $1.15 to $1.24 per hour and for work done during a special working period from $1.28 to $1.32 per hour. Weekly hours remain unchanged at 40 per week.

Specified holidays are increased from 8 to 9.

ONTARIO

Construction

Electrical Workers, Cornwall

An Order in Council, dated October 9, and gazetted October 25, makes binding the terms of a new schedule for the electrical

*In six provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the LABOUR GAZETTE, August, 1951, p. 1110.

repair and construction industry in the Cornwall Zone, to be in effect from November 4, 1952, during pleasure.

The terms of this schedule are similar to those previously in effect and summarized in the LABOUR GAZETTE, December 1951, with the exception of the following:—

Minimum hourly wage rate for work during regular working periods and for night work is increased from $1.50 to $1.65 per hour. Weekly hours are unchanged at 44 per week.

Specified holidays are reduced from 8 to 7 by the deletion of Remembrance Day.

Plumbers, Ottawa

An Order in Council, dated October 9, and gazetted October 25, makes binding the terms of a new schedule for the plumbing and heating industry at Ottawa, to be in effect from November 4, 1952, during pleasure.

The terms of this schedule are similar to those which were previously in effect (L.G., Jan., 1951, p. 65) with the exception of the following:—

Minimum hourly wage rate is increased from $1.70 to $1.95 per hour. Regular hours are unchanged at 8 per day, 40 per week.

Sheet Metal Workers, Ottawa

An Order in Council, dated October 16, and gazetted November 1, makes binding the terms of a new schedule for sheet metal workers at Ottawa, to be in effect from November 11, 1952, during pleasure.

The terms of this schedule are similar to those previously in effect and summarized in the LABOUR GAZETTE, November 1950, with the exception of the following:—

Minimum hourly wage rate is increased from $1.57 to $1.82 per hour for a regular work week of 40 hours.

SASKATCHEWAN

Construction

Carpenters, Swift Current

An Order in Council, dated October 17, and gazetted October 25 makes binding the terms of a new schedule for carpenters at Swift Current and within a radius of 5 miles, to be in effect from November 4, 1952, during pleasure.

Minimum hourly wage rate for journeymen carpenters $1.55 per hour; for carpenters who are not journeymen $1.30 per hour.

ALBERTA

Manufacturing

Garages and Service Stations, Edmonton

An Order in Council, dated October 6, and gazetted October 15, amends the previous Orders in Council for this industry (L.G., Dec., 1946, p. 1779; Jan., 1951, p. 65).

Hours: 8 per day, 44 per week (a reduction of 2½ hours per week). If distribution of working hours fixed in this amendment is impractical, weekly hours may be varied to provide an average of 44 hours in a period of 4 weeks, but in no case will the total hours worked in any one week exceed 48 hours.

Overtime: time and one-half, as previously, for work in excess of regular hours and on Sundays and specified holidays.

Minimum hourly wage rates for mechanics are increased from $1.25 to $1.45 per hour for class AA, from $1.15 to $1.35 for class A1, from $1.05 to $1.25 for class A. The classification mechanic class B is deleted. Minimum rates for other employees are not affected by this amendment.

Through a suggestion of the LMPC, the work-flow in one section of the Robinson Industries Ltd., in Hamilton has been considerably improved. The committee suggested that "job run" forms for machine operators be posted on bulletin boards in advance of the time to start a new operation. In this way, the operators could have a good part of the procedure for starting a new press job done while the last job was still being finished. In addition this suggestion enabled them to know what type of ink to use; if it was the same as the preceding, unnecessary cleaning of presses was eliminated. The idea has also resulted in considerable savings in ink.

Local 540 of the International Printing Pressmen and Assistants' Union of North America (AFL-TLC) is the bargaining agent participating in this LMPC.

The Labour-Management Co-operation Committee (LMPC) in the Express Department of the CNR at Montreal is showing steady progress. A report in the November issue of *The Mount Royal News* (newssheet of "Mount Royal" Division 39 of the Canadian Brotherhood of Railway Employees and Other Transport Workers), under the heading "Labour-Management Committee Going Places," said:—

"This Committee really is doing a job. In addition to a number of matters being attended to, there is a much better relationship existing around the sheds these days. For our part, let us remember that co-operation works both ways. Let us do our part."

The "News" also plans to run a monthly column on the LMPC "to summarize its activities or report special events in connection with its work."

U.S. Amends Coal Mine Safety Act to Permit Closing of Unsafe Mine

Federal inspectors, formerly without authority to enforce compliance with their recommendations, now have power to shut down mines where imminent danger of explosion, fire, flood or hoisting accident exists

By virtue of its power to regulate interstate and foreign commerce, the Congress of the United States has adopted legislation which permits federal inspectors of coal mines to close down a mine when they find there is imminent danger of a major disaster or where the safety requirements of the Act have not been complied with. State co-operation in the enforcement of the federal law is provided for.

Where a state elects to co-operate through its official mine inspection or safety agency, a joint inspection by the federal inspector and a state inspector must be made.

The Act is designed to remove the causes of and prevent such major disasters as mine fires, explosions, inundations, or man-trip or man-hoist accidents. The enactment and enforcement of laws with regard to general accidents, and safety, health and welfare of mine employees are left to the states.

Amendments to the Federal Coal Mine Safety Act, 1941, which give to the federal Government of the United States enforcement powers for the prevention of major disasters in coal mines were signed by President Truman on July 16. Under the amending Act, federal inspectors, who formerly had no authority to enforce compliance with their recommendations for mine safety, now have power to shut down a mine and may do so where there is imminent danger of a mine explosion, fire, inundation or man-trip or man-hoist accident or where there is a continued violation of the safety provisions now contained in the Act. A major disaster, as classified by the United States Bureau of Mines, is one in which five or more persons are killed.

History and Background

Until the passage of these amendments, the enforcement of mine safety laws was a matter left solely to the states. The 29 coal-mining states have a great number of regulations affecting the safety of coal miners but the power given to inspectors for obtaining compliance with the regulations varies greatly.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

The 1941 federal Act, applicable to mines the products of which regularly enter interstate commerce, authorized inspection of coal mines by the Secretary of the Interior, acting through the Bureau of Mines, for the purpose of obtaining information relating to the safety and health of workers in the mines, the causes of accidents involving bodily injury or loss of life and the causes of occupational diseases originating in the mines.

The Secretary is required to submit an annual report to Congress on the information he has obtained and to make recommendations with respect to any legislative action which he considers necessary. The Act also authorizes the publishing of studies concerning the promotion of health and safety and the prevention of accidents in coal mines. The Act as passed in 1941, however, did not require the mine operators to comply with the standards or recommendations of the Secretary.

In administering the Act, provision was made for co-operation between the Secretary of the Interior and the official mine inspection or safety agencies of the states.

Following the disaster in 1947 at the Centralia coal mine in Illinois in which 111 miners were killed through an explosion of highly combustible coal dust, Congress passed an Act requesting that the coal

operators and state mining agencies report on the extent of compliance with safety standards developed by the federal Bureau of Mines. It was found that in 1946-47 only 25 per cent of the Bureau's recommendations were complied with. During 1950-1951, 6,360 mines were inspected and more than 121,000 violations of the Federal Mine Safety Code were reported but only 27 per cent of the inspectors' recommendations were carried out.

After a series of disasters in 1951, chief of which was the explosion of West Frankfort, Ill., in which 119 coal miners were killed, the Secretary of the Interior recommended to Congress the passage of legislation embodying compulsory federal safety regulations and giving the Secretary of the Interior authority to shut down dangerous mines. Accordingly, the 1952 amendments to the Federal Coal Mine Safety Act were passed.

1952 Amendments

The 1952 amendments add a new section to the statute (Title II—Prevention of Major Disasters in Mines). They enact into law safety provisions which coal operators are required to comply with in order to eliminate the causes of major disasters. Some of these basic causes are excessive accumulations of loose coal, coal dust and other combustible materials; accumulations of explosive gases; inadequate precautions in extending underground working areas towards abandoned workings in which water may be impounded; and unsafe hoisting equipment and travelways by which men are transported to working places in the mine.

The safety provisions therefore provide for determining whether or not a mine is a gaseous mine and lay down definite requirements with respect to proper ventilation, rock-dusting, permissible electrical equipment, fire protection, adequate roof support in the travelways and hoisting. In cases of non-compliance with these provisions, a mine-closing order may be issued by a federal coal mine inspector.

It is to be noted that, under the amending Act, the jurisdiction of the federal Government is limited to a small part of the whole field of coal mine safety. The amendments seek to ensure that employees will be provided with a safe place in which to work and to eliminate the causes of disaster over which mine workers have no control. The states retain responsibility for enacting and administering proper laws for the prevention of accidents arising from human failure, in which it is estimated that 90 per cent of fatalities in the coal mining industry occur.

According to the report of the Committee on Education and Labour to the House of Representatives on the amendments to the Act,

> the Bill is not designed to prevent the day-to-day accidents which occur in the mine industry nor for the general health and welfare of the miners. This large field is left to the co-operative efforts between the federal Bureau, the state agencies, employers and employees. The enforcement of rules and regulations in the field of day-to-day accidents, safety, health and welfare is clearly left within the jurisdiction of the several states.

No state or territorial law in effect or which may be enacted in future will be superseded by the federal Act unless its provisions conflict with the Act. Furthermore, any provisions of a state law which provide for greater safety of persons engaged in coal mining operations than do the provisions of the federal Act will prevail. State workmen's compensation laws are not superseded in any way.

State Co-operation

Provision is made for state co-operation in carrying out and enforcing compliance with the federal law. A state which desires to co-operate in making mine inspections is required to have a state plan approved by the Director of the Bureau of Mines designating the responsible state agency, giving assurances that a competent inspection staff will be available to participate in inspections and making provision for reports to be furnished to the Director.

After a state plan has been approved, a mine inspection may not be made in that state by a federal inspector unless a state inspector participates, except where an inspection is urgently necessary to determine whether or not there is danger of an immediate disaster and state participation would cause delay.

Annual Inspection

The Act requires an inspector of the federal Bureau of Mines to make an annual inspection of every mine of which the products regularly enter interstate or foreign commerce or the operations of which substantially affect such commerce. (Strip mines and mines in which no more than 14 persons are regularly employed underground are exempted.) An annual inspection is the minimum requirement and further inspections may be made as the Director deems necessary.

Mine-closing Orders

If, on inspecting a mine, a federal inspector discovers that there is imminent danger of a mine explosion, fire, inundation or man-trip or man-hoist accident, he must determine the extent of the area in which the danger is present and order all persons to be withdrawn from the area.

If the inspector finds that one of the mine safety provisions of the Act is being violated without there being any indication of immediate danger, he must set a reasonable time-limit during which the operator must have the condition remedied. This period may be extended if circumstances warrant it. A special inspection must be carried out when the period of time allowed, or an extended period, expires or whenever a mine operator requests a special inspection. The inspector must then determine whether a further time extension may be made or he may close down the dangerous section of the mine.

If a mine-closing order is issued because of imminent danger in a mine in a state in which a state plan is in effect and a state inspector did not participate in the inspection on which the order is based, the operator of the mine may request the state agency to have the mine inspected. However, the mine remains closed regardless of the findings of the state inspector.

In such a state a mine cannot be closed because of continued violation of the mine-safety provisions of the Act unless a state inspector agrees. If he does not agree, either he, the operator or the federal inspector may apply within 24 hours after the inspection for the appointment of an independent inspector by the chief judge of the United States District Court for the district. The independent inspector must inspect the mine within five days after his appointment. If, after this inspection, either the independent inspector or the state inspector concurs in the mine-closing order, it must be issued. Notice of any finding or order must be posted on the bulletin board of the mine.

Appeals

Provision is made for a coal mine operator to appeal a mine-closing order either to the Director of the Bureau of Mines or to the Federal Coal Mine Safety Board or Review.

When the Director receives an application for review of a mine-closing order, he must himself re-inspect the mine or have a special inspection carried out by three federal inspectors other than the inspector who originally issued the closing order. After inspecting the mine or on receiving the inspection report, the Director must issue an order annulling, revising or affirming the original closing order. An order of the Director may be appealed to the Board.

In a state where a state plan is in effect the appeal must be made to the Board of Review set up under the Act. The Board is an independent tribunal composed of three members appointed for a three-year period by the President with the advice and consent of the Senate. One member must represent the viewpoint of coal mine operators, another the viewpoint of workers and the third member, the chairman, must be a graduate engineer with experience in the coal mining industry or at least five years' experience as a practical mining engineer in the industry.

The Board is required to fix a time for a prompt hearing of an appeal. In the meantime the mine operator may request the Board to grant temporary relief from the order and the Board may grant such relief after it holds a hearing at which both the applicant and the Director are heard. The Board is not bound by any previous findings of fact made by the Director or a coal mine inspector and may take evidence from both parties. The burden of proof rests upon the Director. The findings and orders issued by the Board must be in writing and must bear the signatures of the members who concur.

The Act provides that any final order issued by the Board revising, affirming or annulling the original order is subject to review by the United States Court of Appeals if notice of appeal is filed within 30 days after the date of the order. Pending the hearing of the appeal, the Court may postpone the effective date of the final order or grant other appropriate relief. The Court must hear the appeal on the record made before the Board and permit argument by both parties. The decision of the Court of Appeals is final, subject only to review by the United States Supreme Court.

Gassy Mines

The Act also authorizes a federal inspector to issue an order requiring a mine operator to comply with the mine safety provisions which govern the operation of gassy mines. Such an order is issued when the inspector finds that methane has been ignited in the mine or that methane gas is present in an amount of 0·25 per cent or more in any open workings when tested

by recognized means of accurately detecting the gas at a point not less than 12 inches from the roof, face or rib. An operator who does not agree with the inspector's finding has the option of appealing either to the Director or to the Board of Review for an annulment of the order.

Mine Safety Provisions

Every mine operator and every person on the mine premises must comply with the safety provisions of the Act. In general, these provisions may be summarized as follows:—

They contain special provisions which must be complied with in a mine classified by state law as a gassy mine or where the federal inspector has found dangerous amounts of methane gas.

They seek to safeguard workers against accumulations of explosive gas by adequate ventilation and sealing of abandoned workings.

They require regular examinations of all underground areas.

They require accumulations of coal dust ot be covered with inert rock dust so that the combined coal dust and rock dust will not explode or burn.

They provide that electrical machinery must be of an approved type so as to prevent sparks from igniting an explosive mixture of air.

They require bore-holes to be drilled in advance of the working place when approaching abandoned workings which may contain dangerous accumulations of water.

They provide that hoists must be equipped with safety brakes and safety catches and must be inspected daily.

They prescribe fire prevention precautions.

Ventilation

The active underground working places must be ventilated by a current of air containing not less than 19·5 per cent oxygen, not more than 0·5 per cent carbon dioxide and no harmful quantities of other noxious gases. Its volume and velocity must be sufficient to dilute, so as to render harmless, and to carry away harmful gases. Special provisions apply to ventilation in bituminous coal, lignite and anthracite mines. Precautions must be taken to ensure that the air does not contain more than one per cent methane gas.

In a gassy mine air may not be used for ventilation purposes if it has passed through abandoned workings which are inaccessible for inspection or if it has been used to ventilate a pillar line or an area from which pillars have been removed. However, if compliance with this section is impossible, the mine may continue to be operated for a reasonable time until, with future mine development, ventilation can be changed to comply with this provision. In no case, however, may air be used to ventilate the mine if it contains more than one per cent methane.

Examinations for Gas and Other Hazards

A thorough inspection must be carried out in a gassy mine within the four-hour period before each shift begins. Each person designated to make the examination must be assigned to a definite underground area and must inspect every active working face, testing with a permissible flame safety lamp for accumulation of methane and oxygen deficiency; examine seals and doors; inspect and test roof, face, and rib conditions; inspect travelways, approaches to abandoned workings and accessible falls in active sections for explosive gas and other hazards; and determine whether the air in each split is travelling in its proper course and in normal volume.

If, during the inspection, the mine examiner finds a dangerous condition, he must post a danger sign conspicuously at a point where it will prevent persons from entering the danger area. The mine examiner must place his initials and the date near the face of each place examined. After the examination is completed, the mine examiner must report the results to a designated person before the shift begins and must also record his report in a book kept at the surface. No person may enter an underground area in a gassy mine, except during a coal-producing shift, unless an examination has been carried out within the previous 12 hours.

In non-gassy mines a similar examination must be made at least once a day. The daily examination must be made within the four hours preceding the beginning of the first coal-producing shift.

In addition, at least once during each shift the underground workings of all mines must be examined for hazards. In gassy mines this examination must include tests for oxygen deficiency and methane.

In a gassy mine, all workings which are abandoned after July 16 or the date on which the mine became a gassy mine, whichever date is later, must be sealed or ventilated.

Rock-Dusting

Coal dust, loose coal and other combustible materials must not be permitted to accumulate in dangerous quantities in

active underground workings. Except in anthracite mines, if underground mining operations raise an excessive amount of dust, water or another effective method may be used to allay the dust at its source. All underground mines, except those in which the dust is too wet or too high in incombustible content to cause an explosion, must be rock-dusted to within 40 feet of all faces. Where rock dust is applied, the incombustible content of the combined coal dust, rock dust and other dust must not be less than 65 per cent. Rock-dusting is not required in anthracite mines, because anthracite coal dust is not explosive.

Electrical Equipment

All electric face equipment used in a gassy mine must be approved by the Director unless the equipment was in use before the Act went into force or before the mine became a gassy mine, whichever date is later.

Fire Prevention

Suitable and adequate fire-fighting equipment must be provided for each mine. After blasting operations are carried out, an examination for fire must be made. Underground storage places used for storing more than two days' supply of lubricating oil and grease must be of fireproof construction. Oil and grease kept in face regions or other underground working places must be stored in portable, closed, metal containers. All underground structures installed after the Act is in force must be fireproof.

Welding, cutting or soldering with arc or flame in underground regions in other than a fireproof enclosure must be done under direct supervision of a qualified person who must test for methane before and during such operations in gassy mines and must make a thorough search for fire after these operations have been carried out in any mine. Rock dust or suitable fire extinguishers must be immediately available during welding, cutting or soldering operations.

Smoking is forbidden underground in a gassy mine and persons are not permitted to carry smoking materials, matches or lighters underground. Only authorized electric lamps may be used in a gassy mine for portable illumination. Black blasting powder may not be stored or used underground in a mine. However, until January 16, 1953, this prohibition does not apply to a mine in which the storage and handling of such powder is expressly permitted by state statute. Mud caps and other unconfined shots must not be fired underground. Under specified conditions this restriction does not apply to anthracite mines.

Protection against Mine Inundation

Where a working place in an underground mine approaches within 50 feet of abandoned workings as shown by surveys made by a competent engineer, or within 200 feet of other abandoned workings which cannot be inspected and which may contain dangerous accumulations of water or gas, or within 200 feet of the workings of an adjacent mine, bore-holes must be drilled to a distance of at least 20 feet in advance of the face of the working place.

Roof Support

In order to prevent man-trip accidents, the roof and ribs of all active underground roadways and travelways must be adequately supported.

Hoisting

Hoists used for transporting persons at a mine, except hoists used in excavating shafts or slopes, must be equipped with overspeed, overwind and automatic stop controls, unless a second engineer is on duty. Such hoists must be equipped with brakes capable of stopping the cage when fully loaded and have a cable sufficiently strong to sustain the fully loaded platform with a proper margin of safety.

Cages used to transport persons in vertical shafts, unless they are also used to transport coal, must be equipped with safety catches which will act effectively in an emergency. Such safety catches must be tested every two months. Hoists used for transporting persons must be inspected daily.

Administrative Provisions

The Act permits the Director to determine whether the construction of any equipment conforms to specifications which are designed to ensure that the equipment will not cause a mine fire or explosion. If the equipment conforms to such specifications, the manufacturer is authorized to attach to it a label indicating that it has been approved.

No person may act as federal mines inspector unless he has the basic qualification of at least five years' practical experience in coal mining and is recognized by the Bureau as having the training or experience of a practical mining engineer.

An appropriation not exceeding three million dollars is set aside for administering the new provisions of the Act.

Penalties

A maximum penalty of $2,000 is provided for a mine operator, agent or any person who knows that a mine-closing order has been made and who fails to comply with the order. Any owner, lessee, agent, manager or other person who has control or supervision of a coal mine who refuses to admit the Director or authorized representative of the Bureau, a state inspector assigned in accordance with a state plan or an independent inspector appointed under the Act may be fined up to $500.

Legal Decisions Affecting Labour

British Columbia Appeal Court upholds contempt of court conviction of IWA picketers. Appeal case in Quebec deals with use of injunction in labour dispute in textile industry. Injured worker loses action for damages against employer in another Quebec case. Newfoundland magistrate finds fish products firm guilty of unfair labour practices

An appeal against the judgment of the British Columbia Supreme Court in which Tony Poje and other IWA members were found guilty of contempt of court for disobeying an anti-picketing injunction has been dismissed by the British Columbia Appeal Court. In Quebec, a textile company has won its appeal against an injunction obtained by the union to prohibit changes in work load during contract negotiations.

In a Quebec Superior Court action brought by a die maker injured by an automatic press it was held that the employer had fulfilled his obligation in warning the employee of the danger and supplying him with proper tools. He was held not negligent in permitting the man to test the die on a press that was not equipped with a guard.

A Newfoundland employer prosecuted for unfair labour practices was fined $400 in the Magistrate's Court at Harbour Grace.

British Columbia Appeal Court . . .

. . . dismisses appeal by members of woodworkers' union against conviction for contempt of court

The British Columbia Appeal Court on October 7 dismissed the appeal by an officer of the International Woodworkers of America (CIO-CCL) and 14 union members from the judgment convicting them of contempt of court for their defiance of an anti-picketing injunction issued during the lumber strike. The British Columbia Supreme Court had imposed a sentence of a $3,000 fine and a three-month prison term on the union leader and a $300 fine on each of the others (L.G., Nov., 1952, p. 1489).

Mr. Justice Smith and Mr. Justice Bird gave reasons for the judgment of the Court, while Mr. Justice O'Halloran gave a dissenting opinion.

Counsel for the union members appealed from the contempt of court judgment on the ground that the injunction order which the men had defied was a nullity that could be ignored because it was based on inadequate evidence, was contrary to the British Columbia Trade-unions Act, and because it was issued in permanent form. He maintained that the injunction order was contrary to Section 3 of the Act, which provides that no trade union or its officers, members or agents may be enjoined for the mere communication of facts concerning employment and for peaceful persuasion. He argued also that in accordance with the statute regulating *ex parte* injunctions the practice of the court is never to grant a perpetual injunction before trial.

Mr. Justice Smith and Mr. Justice Bird both emphasized that the order of a superior court is never a nullity but has full force until reversed or amended on appeal to a higher court. While these objections to the injunction might be grounds for an appeal, they were no basis for the argument that a person may with impunity ignore a court order which stands unchallenged. Mr. Justice Smith termed "entirely novel and against principle" the

idea that an order should be a nullity because founded on insufficient evidence. Similarly, the argument that a court acts without jurisdiction when it errs in matters of statute law was, in his opinion, clearly contrary to authority and principle.

A second argument presented by counsel for the appellants was that the Chief Justice of the Supreme Court who had found the men guilty of contempt of court was not entitled to take contempt proceedings on his own motion, as he had done. The shipping company, which had moved on July 23 to commit certain of the picketers for contempt of court for their defiance of the injunction, withdrew its motion on July 24 after a settlement had been reached with the woodworkers' union. The Chief Justice then initiated contempt proceedings himself.

Mr. Justice Smith held that the court may always intervene in such a case where its prestige is affected. Although disobedience to an injunction is generally considered an injury to the party who obtained it, it is also a challenge to the court, His Lordship stated. In this case the disobedience was not from negligence but deliberate and, therefore, constituted contumacious contempt of court. In His Lordship's words:—

> The way the injunction was received was a direct challenge to the court's powers. After it had been served on the union's officer, Poje, he continued not only to picket, but to picket with numbers that are very suggestive; in fact, they can only be given a sinister interpretation. The primary object was undoubtedly to overawe the longshoremen but even for that they were extravangantly excessive. On one occasion there were something like 190, on another between 60 and 70, on another more than 50. This clearly points to an attempt to impress the public with the power of the union and the size of its resources. A threat of force was inherent in the very numbers.

Mr. Justice Bird shared the view that the picketers' conduct was a challenge to the authority of the court carrying the implied assertion that the union and its members stood above the law. He also held that the Chief Justice had acted properly in taking contempt proceedings. Both judges cited cases as authority for the court's action.

Counsel for the union members raised several objections to the procedure followed by the Chief Justice, claiming among other things that no specific charge relating to the alleged contempt was made against his clients and that they were not given an opportunity to make a full defence.

Both Mr. Justice Smith and Mr. Justice Bird considered that there had been no impropriety in the Court's procedure. Where a judge acts of his own motion, the normal court rules do not apply, they held.

Although no formal charge was made against the union members, and no formal notice of the alleged contempt was given them before the writs were issued ordering them to appear in court, they had full knowledge of the charge against them since their counsel appeared in court on July 29 when the sheriff gave his evidence. Their counsel did have a chance to present their defence and he did give evidence on behalf of two of the men charged, who were subsequently acquitted. He admitted that the sheriff's evidence against the 14 others was correct, offered an apology to the Court on their behalf and asked for leniency.

For the reasons stated, the Court dismissed the appeal and upheld the judgment of Chief Justice Farris.

Mr. Justice O'Halloran, dissenting from the judgment of the Court, held that the question whether the contempt was of a civil or criminal kind was a determining factor in deciding whether the appeal should be upheld. He considered that the contempt proceedings were civil because they arose out of a civil action.

In His Lordship's view, the sentence imposed for contempt of court would be appropriate only if the contempt were of a criminal nature. He referred to *Seward* v. *Paterson* [1897], a case relied upon in the Supreme Court as a precedent for finding persons guilty of contempt for aiding and abetting in the breach of an injunction although they were not persons named in the injunction order. He pointed out that in that case the offence was undoubtedly criminal contempt because it was a breach of a perpetual injunction issued after a full hearing at the trial. He held that in the case at bar the union leader would have to be found guilty of criminal contempt before the other 14 union members could be convicted of contempt as aiders and abettors.

Mr. Justice O'Halloran then examined Poje's conduct to determine whether it could be considered criminal contempt of court. He had not interfered with the sheriff, and no charges of threats, abuse, violence or clear intimidation had been proved against him. The main complaint against him was that as picket captain he went up to a car of longshoremen and asked "Are you fellows longshoremen?" to which they replied "Yes, are we going to

load?" and Poje said "No sir, no sir." His Lordship considered that the nature of conversation indicated that an agreement had probably been reached by officials of the two unions. He also stated that it was not to be expected that members of the longshoremen's union would load the ship if even one picket remained there and, in fact, their agreement with their employer stipulated that they did not have to cross a picket line. For these reasons Mr. Justice O'Halloran considered that Poje had carried on communication without intimidation and so had not exceeded the limits of legal picketing. The same thing was true of the other 14 appellants.

In considering the appellants' claim that the injunction order was made without jurisdiction and was therefore a nullity, Mr. Justice O'Halloran dealt further with the problem of whether or not the picketing was legal. The injunction prohibited "watching and besetting," a term which is now generally accepted as synonymous with peaceful and orderly picketing, His Lordship stated. In his opinion it was established by the majority judgment of the Supreme Court of Canada in *R. Williams et al* v. *Aristocratic Restaurants* (L.G., 1951, p. 1553) that Sections 3 and 4 of the British Columbia Trade-unions Act prohibit the issuing of an injunction (even temporary before trial) to restrain peaceful and orderly picketing. He concluded therefore, since the injunction order in this case was against peaceful picketing, that it was without jurisdiction on its face and that the picketers had reason for so regarding it.

Mr. Justice O'Halloran stated that Chief Justice Farris in his reasons for judgment seemed to have taken it for granted that the conduct of the men if pursuing peaceful picketing was in itself an offence, because it occurred during a strike which he considered illegal. Mr. Justice O'Halloran said he had held the same view in principle until the reasoning of the Supreme Court of Canada in the *Aristocratic Restaurants* case, where the picketing was held to be legal although it occurred when there was no strike, where no members of the union were employed in the restaurants, and the restaurants suffered considerable loss from the picketing. He referred also to the judgment of the Ontario High Court in *General Dry Batteries of Canada Limited* v. *Brigenshaw* (L.G., Feb., 1952, p. 188). He stated, moreover, that the question whether the lumber strike was illegal or not could not be determined by any court until a full hearing was held at which the union had ample opportunity to bring evidence. His Lordship concluded, therefore, that the picketing was legal.

Mr. Justice O'Halloran held that, once it was decided that the contempt was of a civil and not a criminal kind, then the judgment of the Supreme Court, which treated it as a criminal contempt, must fall automatically. He was convinced from the language of Chief Justice Farris' reasons for judgment that it had been dealt with as a criminal contempt. The procedure followed in issuing writs of attachment without notice also indicated that the Court had considered the offence criminal contempt.

In Mr. Justice O'Halloran's view, the impropriety of the procedure was another ground for allowing the appeal. He emphasized that the process of committal or attachment must be carried out in strict accordance with court rules because it affects the liberty of the subject. He considered also that the court's jurisdiction to initiate contempt proceedings should be exercised only where the case is clear beyond all reasonable doubt and that in other cases a judge should leave the matter of prosecution to the Attorney General.

Further, Mr. Justice O'Halloran was of the opinion that the appellants had not been adequately charged. If the offence were criminal contempt, and that of aiding and abetting in a criminal contempt, they should have been specifically charged as soon as they were brought before the Court on September 15. They should also have been informed of the consequences if the charge against them were proved and their counsel should have been given full opportunity to explain the legal points he sought to raise. His Lordship was of the opinion that when the appellants' counsel gave an apology on their behalf he did not know that the charge was criminal contempt.

For these reasons, Mr. Justice O'Halloran would have allowed the appeal of Poje and the 14 other union members. *Canadian Transport (U.K.) Limited* v. *Alsbury et al,* [1952] 7 WWR (NS) 49.

Quebec Court of Queen's Bench, Appeal Side . . .

. . . dissolves injunction prohibiting textile firm from changing work conditions while negotiating

The Quebec Court of Queen's Bench, Appeal Side, in Montreal on June 27, 1952, allowed the appeal of a textile company from a Superior Court judgment granting a union's application for an interim injunction to restrain the company from changing certain conditions of employment. The

Court of Queen's Bench held that the union had not established that a right was being violated or that any serious injury would be suffered as a result of the company's action.

The change in conditions of employment initiated on January 14, 1952, by the employer, Dominion Textile Company Limited, in its plant at Magog, was to assign three looms instead of one to each worker. As a result, 20 employees were no longer required to operate looms. Their union, the *Syndicat Catholique des Ouvriers du Textile de Magog, Inc.*, applied for and obtained an interim injunction to prohibit the change. The union claimed that the employer's action violated Section 24 (1) of the Quebec Labour Relations Act, which reads:—

> Any strike or lockout is prohibited so long as an association of employees has not been recognized as representing the group of employees concerned, and so long as such association has not taken the required proceedings for the making of a collective agreement and fourteen days have not elapsed since the receipt by the Minister of Labour of a report of the council of arbitration upon the dispute. *Until the above conditions have been fulfilled, an employer shall not change the conditions of employment of his employees without their consent.*

Mr. Justice Bissonnette gave reasons for the Court's decision to allow the company's appeal and dissolve the injunction. Three other judges concurred with him, while Mr. Justice Gagné gave a dissenting opinion.

Mr. Justice Bissonnette pointed out that in dealing with an application for an injunction it is not the function of the court to determine the issues of the case but only to decide whether an injunction should be issued. In this case it was not necessary to interpret the terms of the collective agreement or the intent of Section 24 of the Labour Relations Act. He referred to Article 957 of the Code of Civil Procedure, which lists the conditions under which an interim injunction may be issued. Paragraph 1 (a) provides that a judge of the Superior Court may grant an interim injunction at the time of issuing a writ of summons whenever it appears that the plaintiff is entitled to the relief demanded and that the relief consists in restraining the commission or continuance of any act. His Lordship stated that in such a case the clear rights of the parties must be established and the court must fully consider the harm that the injunction might cause to the defendant party.

He pointed out that in this case the injunction caused serious injury to the company in that it prevented it from exercising a right inherent in industrial ownership and management, the right to change methods of production or arrangement of machinery. He considered that the union's rights in the matter were not clear. Moreover, if the injunction were refused, no irreparable harm would result to the union or its members because the company's legal obligations to them would remain the same and any injury could be compensated.

In His Lordship's view, to uphold the injunction would be to establish the precedent that, whenever a worker is discharged because of some reorganization in a factory, the employer may have to face a court case. To say that an employer must ask and obtain the consent of his employees before carrying out the slightest change would be to misinterpret Section 24 of the Labour Relations Act, His Lordship held.

Mr. Justice Gagné, dissenting, examined Section 24 (1) of the Act to see if it was applicable to the situation. The union was recognized as bargaining agent for the company's employees. The previous collective agreement had expired on November 9, 1951, and subsequent negotiations did not result in the conclusion of a new agreement. The other steps which the Act requires to be taken before a strike or lockout or change in conditions of employment may take place had not been followed, namely, the appointment of a conciliator who must report to the Minister of Labour within 14 days, the appointment of a council of arbitration and the reception of its report by the Minister. Mr. Justice Gagné held, therefore, that the union's claim that the employer had no right to change conditions of employment without his employees' consent should be taken seriously.

In a case where the applicant for an injunction showed a right which was apparently well founded, the doctrine of "the balance of convenience and inconvenience" should then be applied, His Lordship stated. That is, which of the two parties would suffer the greatest damage if it lost its case?

The company maintained that the change was necessary if it were to compete effectively with other manufacturers and meet current economic conditions. The enforcement of the injunction would cost $800 a week in wages of $1 an hour to 20 employees on a 40-hour week. The employer also stated that the 20 workers deprived of their usual job "were trans-

ferred elsewhere". Mr. Justice Gagné stated that this had not been established.

He then proceeded to consider the union's case. It appeared that 20 employees would be dismissed if the company were allowed to put through the change. If it were true that these 20 men would remain in the company's employ at the same salary, the injury would obviously be less serious; but it was no less true that the workers continuing to operate the looms would have a heavier task and greater responsibility while those transferred elsewhere would have to do a different type of work from what they were accustomed to do.

For these reasons Mr. Justice Gagné would have dismissed the company's appeal. *Dominion Textile Company Limited* v. *Syndicat Catholique des Ouvriers du Textile de Magog Inc.*, [1952] BR Montreal, No. 9, 666.

Quebec Superior Court . . .

. . . holding that the employer was not negligent, dismisses action of injured worker for damages

The Quebec Superior Court at Iberville on February 1, 1952, dismissed an employee's action for damages against his employer for injuries received while he was testing a die on an automatic press. The Court held that there was no defect in the machine or other negligence on the part of the employer and that the accident was due to the employee's own carelessness.

In his reasons for decision, Mr. Justice Challies described how the accident occurred. The plaintiff, a die maker, was testing a die by cutting out pieces from a strip of metal. He had cut out three or four pieces, each time pressing once on the pedal and causing the press to fall once. The fourth or fifth time that he pressed the pedal the press fell five or six times instead of once so that when he reached into the press to pick out the formed piece of metal his fingers were cut off by the falling press.

The plaintiff based his case on Articles 1053 and 1054 of the Civil Code. Article 1054 makes a person responsible not only for the damage caused by his own fault but for that caused by things under his care. For the plaintiff's case to succeed under this provision, he must prove that the accident happened as a direct result of a defect in the press itself without any human intervention, His Lordship stated.

The plaintiff testified that if one pressed once on the foot pedal the press was supposed to drop once and once only. One of the defendants stated that one pressure on the foot pedal, if well applied, would cause the press to fall once, but that the press could repeat as long as the operator kept his foot on the pedal. A catalogue describing the type of press included a description of a single stroke mechanism which could be used to ensure that the treadle must be raised and again depressed for each stroke of the press. The evidence did not establish whether or not the press was equipped with this single stroke mechanism and, if it was, whether the mechanism was engaged at the time of the accident. In any case, one of the plaintiff's witnesses cast some doubt on whether one stroke of the treadle always gives just one stroke of the press and seemed to suggest that foot pressure should be applied gently. Evidence was given that the press was working normally both before and after the accident.

His Lordship concluded that the plaintiff had not proved that the press was defective or that it was the act of the press itself, without human intervention, which caused the accident.

Article 1053 reads:—

> Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill.

The plaintiff claimed that the company was guilty of negligence for operating a dangerous machine without an automatic guard and doing nothing to protect the operator from the danger.

A forming press like the one the plaintiff was operating is usually equipped with a guard in the form of a horizontal bar which drops in front of the press as its movable part is falling and so keeps the operator's hands out of the way. The plaintiff criticized the company because the press on which he was working did not have a guard. The defendants answered that it was not feasible to have a guard on a press being used by a die maker to test a die. A die maker must remove the guard before installing the die in the press, and frequently, while making the die, must test the die in the press several times before finding it satisfactory. It would take too long to install a guard on a press which is going to be required to stamp out only four or five pieces in testing a die, the company maintained. Several witnesses supported this view. It was also established by the evidence that the plaintiff was employed as a die maker. The Court accordingly held that the company was not negligent in permitting him to test his die on a press not equipped with a guard.

Counsel for the plaintiff also argued that the company was obliged to protect an employee engaged in work on a dangerous machine from the consequences of his own negligence. His Lordship stated that it was proved that the plaintiff had been warned at least once not to put his hands into the press. When he was hired he was instructed not to put his hand in the press but to use a screw driver or a piece of metal or wood to pick out the pieces of metal stamped by the press, or to turn off the motor before putting his hand in the press. The proof disclosed also that rods to be used for that purpose were kept on a work bench behind the press. One of the defendants testified that he had shown the plaintiff where the rods were and had instructed him to use one, although he had not actually put one in his hand.

Mr. Justice Challies referred to the statement of Chief Justice Létourneau in *Laramée* v. *Boucher* [1944] on an employer's obligation to protect his workmen from dangerous machinery by giving the necessary orders and warnings. However, in Mr. Justice Challies' opinion, this obligation does not extend to doing more than warning the employee of the dangers and supplying him with proper tools. The employer is not required to force an experienced employee to be careful. Accordingly, if an employee disobeys orders received in respect to security precautions he will have himself to blame for any accident resulting from such disobedience.

His Lordship concluded:—

> In the present case it is my opinion that this unfortunate accident was due in no way to any failure of defendants or their employees to warn plaintiff of the danger of putting his hands in the press or to supply plaintiff with tools which he could use to remove pieces of metal from the press, but solely to the default and imprudence of plaintiff himself who, although a skilled and experienced die maker with a number of years' experience in working on and around the presses in the plant of the Singer Mfg. Co. at St. Johns, P.Q., imprudently put his hand into the press to remove a piece of metal. I do not think that there was any obligation on defendants' part to do more than to warn plaintiff of the danger and tell him to use a metal rod or some other similar device which was available on a work-bench in the factory near the press. They were not obliged actually to take a metal rod or a pair of pincers and put them into the plaintiff's hands.

It was also alleged that the employer had admitted responsibility by paying part of the injured man's medical expenses. The judge held that the payments were made as a humanitarian gesture without any admission of liability.

The Court accordingly dismissed the action. *Bruneau* v. *Rainville and Another*, [1952] CS Montreal, 7 and 8, 370.

Supreme Court of Nova Scotia . . .

. . . refuses employer permission to appeal to the Supreme Court of Canada in a certification case

On July 8 the Nova Scotia Supreme Court refused permission to appeal to the Supreme Court of Canada from its judgment which quashed the Nova Scotia Labour Relations Board's order dismissing a union's application for certification because one of its officers was a Communist and directed the Board "to determine the application for certification according to law" (L.G., July, 1952, p. 937).

The Court, in dismissing the employer's application for leave to appeal to the Supreme Court of Canada, held that the judgment was made in the exercise of judicial discretion and could not be appealed. *The Queen* v. *Labour Relations Board (Nova Scotia) et al*, [1952] 4 DLR 384.

Newfoundland, Magistrate's Court . . .

. . . fines company for interfering with employees rights, in violation of the Labour Relations Act

As the result of an action brought by a union, an employer in Newfoundland was recently fined $400 for unfair labour practices. The Magistrate's Court at Harbour Grace, in a judgment given November 12, found that Fishery Products Limited had violated the Newfoundland Labour Relations Act by interfering with its employees' selection of a bargaining agent and by refusing to employ or continue to employ members of the union which was seeking certification from the Labour Relations Board.

The written judgment issued by Magistrate White sets out the facts. The complainant union, Federal Labour Union No. 24833, Bay Roberts, was organized in June 1951 and received its charter in August 1951. In September, it applied to the Labour Relations Board to be certified as bargaining agent for employees at the company's Bay Roberts plant. On September 14 the union wrote to the company stating that it had as members a majority of the employees in the plant and asking the company to commence negotiations with a view to concluding a collective agreement.

On receipt of the union's letter, the company asked its manager at Bay Roberts to find out from the men how many were

members of the union and how many were not. When the manager replied that there were one or two more non-union men than union members, an executive officer of the company went to Bay Roberts and called a meeting of employees at the plant. He told the men that it was not the intention of the company to recognize the union at this time because it did not have a majority of the workers and because there were objectionable features in the proposed agreement it submitted. He admitted in court that he may have pointed out that the company did not have to work under the proposed agreement since the fish, or some of it, could be sent to another plant. However, the company was not against organized labour and if the employees wished to form their own association the company would "talk to them".

Within a few days an association was formed among employees of the plant. In answer to a question asked by the association, the company's officer stated that members of the association would be given preference in obtaining work. The company's practice was to hire employees on a day-to-day basis depending on the volume of work. The policy of giving preference in hiring to members of the association was put into effect by the general foreman of the plant on September 26 or 27, on instructions from the company officer.

On September 27 the general foreman asked employees to sign a paper, prepared by the president of the association, stating that they were no longer members of the union. Nineteen men signed this statement. Four of these men, who were called as witnesses by the union, stated that they understood they had to sign this paper in order to continue working at the plant and that they had been working there since that time. Three others stated that they had refused to sign the paper and to resign from the union and that they had been refused work.

When the union's application for certification was heard in March 1952, the Labour Relations Board directed that a representation vote be held at the plant. In this election, conducted by an official of the Department of Labour, nine out of 44 eligible voters voted for the union and 33 voted against it. The Board accordingly dismissed the application. The union then applied to the Minister of Labour for consent to prosecute the company on three charges of unfair labour practices. Consent was given June 9 and the prosecution began September 10, 1952.

The union's first charge was that the employer had violated Section 4 (1) of the Labour Relations Act, which forbids an employer or anyone acting on his behalf to "participate in, or interfere with, the selection, formation, or administration of a trade union". A proviso states that an employer may permit a trade union representative to confer with him during working hours or attend to the business of organization without deduction of wages. The employer may also provide free transportation to union representatives for the purpose of collective bargaining or permit a trade union the use of his premises.

Counsel for the company maintained that the company was entitled to indicate its preference in the matter of a bargaining agent. On this point he cited the cases of *Lakeshore Workmen's Council* v. *Lakeshore Mines Ltd., and International Union of Mine, Mill and Smelter Workers, Local 240* [1944] 1 DLR and *United Electrical Radio and Machine Workers of America* v. *Atlas Steels Ltd., and Atlas Workers Independent Union* [1944] 1 DLR.

Magistrate White stated that the findings in each case were based upon a particular set of facts. He referred to this statement by Mr. Justice Roach in the Lakeshore case:—

> I do not think that the evidence established that the applicant is dominated by the company. That the company preferred the applicant to the union there is no doubt. Through its officers, it openly and, indeed, vigorously indicated that preference. What is "improper influence" is a question of fact in each particular case, but whatever the acts or attitude which it is alleged in any particular case constitute improper influence, they must, in order to be thus designated, be such that, either individually or collectively, they interfered with the decision, judgment or action of the members of the bargaining agency, either to the prejudice of those members, or those whom they represent, or at least to the extent that the members of the agency are embarrassed in making decisions or taking action . . .

Magistrate White considered that in the case at bar the employer's conduct did interfere with the employees' free selection of a trade union to represent them in collective bargaining. Since the company was not required to negotiate with the union before it received certification, the employer was not called upon to ascertain whether the union had a majority. The Magistrate pointed out that the company had apparently accepted its manager's figures of union membership without question although it must have realized that the workers were not obliged to make known to a company representative whether

or not they were members of the union. The company then on its own initiative suggested the formation of an employees' association and stated that it would negotiate with such an association but not with the union. Magistrate White termed "highly improper" the executive officer's threat that work might be diverted to another plant if the employees supported the union. The company's undertaking to give preference in employment to members of an association just being formed was also an improper attempt to exert pressure on the employees. The foreman's conduct in carrying out this policy helped the employees' association to obtain members. Magistrate White found, therefore, that the employer's conduct was contrary to the section of the Act forbidding interference in the selection or formation of a trade union.

The second charge against the company was that it had violated Section 4 (2) (a) of the Act, which reads:—

> No employer and no person acting on behalf of an employer shall (a) refuse to employ or to continue to employ any person, or otherwise discriminate against any person in regard to employment or any term or condition of employment because the person is a member of a trade union; . . .

Magistrate White stated that the evidence of the four witnesses who stated that they were told by the foreman to leave the union or join the association or there would be no more work for them was uncontradicted. The fact that the foreman had refused to employ these men contrary to Section 4 (2) (a) of the Act was established by his own evidence.

Thirdly, the company was charged with violating Section 4 (3) of the Act, which reads:—

> No employer and no person acting on behalf of an employer shall seek by intimidation, by threat of dismissal, or by any other kind of threat, or by the imposition of a pecuniary or other penalty, or by any other means to compel an employee to refrain from becoming or to cease to be a member or officer or representative of a trade union . . .

Magistrate White held that the actions of the company's officer and foreman had operated as a threat which caused some of the men to cease to be members of the union.

The Court accordingly found the company guilty on all three charges of unfair labour practices and imposed a fine of $200 for the first charge and $100 for each of the other two. *Federal Labour Union No. 24833, Bay Roberts,* v. *Fishery Products Ltd., St. John's,* Magistrate's Court at Harbour Grace, November 12, 1952, unreported.

Recent Regulations, Federal and Provincial

Authority given inspectors under British Columbia Hours of Work and Minimum Wage Acts to issue permits allowing, for not longer than two weeks, longer hours in cases of extreme pressure of work. Minimum rates increased 10 per cent in Quebec. In Saskatchewan, locomotive engineers brought under Workmen's Compensation (Accident Fund) Act

New regulations have been made under the Government Employees Compensation Act, which provides for the payment of compensation by the federal Government according to the terms of the Workmen's Compensation Act of the province in which an accident occurs or an industrial disease is contracted. The regulations follow a 1952 amendment which provided that compensation should be paid to a federal employee who is disabled or whose death is caused by a disease peculiar to his occupation but not compensable in the province in which he was employed.

In British Columbia, authority has been given to inspectors under the Hours of Work and Minimum Wage Acts to issue permits, effective for not more than two weeks, allowing longer hours than eight and 44 in cases of extreme pressure of work. The order applies to all parts of the province except Vancouver and Victoria.

67040—8

The Quebec Minimum Wage Commission has put into effect a further 10 per cent increase in the minimum rates set by General Order 4.

A third group of railway workers, the International Brotherhood of Locomotive Engineers, has been brought under the Saskatchewan Workmen's Compensation (Accident Fund) Act.

FEDERAL

Canada Shipping Act

Pilotage By-laws

District of Sydney, N.S.

Amendments with respect to the superannuation of pilots were made to the pilotage by-laws for the Sydney District by an Order in Council (P.C. 4275) approved on October 15 and gazetted November 12.

One amendment, which is similar to a change made in the by-laws for the Saint John district earlier this year, provides that not less than seven per cent of the gross pilotage dues received in any fiscal year must be paid into the Superannuation Fund. Formerly, the percentage was left to the discretion of the Pilotage Authority after consultation with the Pilots' Committee. If the total amount contributed to the Fund in a fiscal year averages less than $375 per pilot, the regulations provide that an actuarial investigation may be made by the Pilotage Authority to determine whether any additional contribution may be necessary to make proper provision for future benefits.

A pilot who has served for five years or more as a licensed pilot receives, on retirement, an annual payment for life from the Superannuation Fund, the amount depending on his length of service. The maximum amount which may be paid in a year out of the Fund was increased from $25 to $50 for each year of service or the sum of $1,800 instead of $900.

As before, the widow of a licensed pilot or retired licensed pilot is entitled, until re-marriage, to receive an annual payment not exceeding one-half of the pension payable to her husband on retirement. The maximum amount payable to each child until he becomes 18 years old was raised from $25 to $120 a year.

The increases in the maximum pension payable to a pilot and to the allowance for the children of a deceased pilot are effective from October 15, 1952, and do not affect pensions and allowances which were granted before that date.

District of British Columbia

A number of amendments with respect to pilotage rates and detention charges were made in the by-laws of the District of British Columbia by P.C. 4274 on October 15, gazetted November 12.

Government Employees Compensation Act

New regulations were issued under the Government Employees Compensation Act to provide for the payment of compensation to employees of the federal Government who contract a disease due to their employment where the disease is not compensable under the law of the province in which they work.

The Act was amended at the spring session in 1952 (L.G., Sept., 1952, p. 1196) to provide that in the case of any government employee whose disability or death is the result of a disease which is not compensable in the province in which it was contracted but which is "due to the nature of his employment and peculiar to or characteristic of the particular process, trade or occupation in which he was employed at the time the disease was contracted" compensation may be paid to him or his dependants. Until then, the Act provided for the payment of compensation to federal employees in accordance with individual provincial Workmen's Compensation Acts, that is, a person who contracted an industrial disease in a particular province would only be eligible for compensation if the disease was included in the schedule of industrial diseases of that province, the only exceptions being hospital employees and nurses exposed to pulmonary tuberculosis, who were eligible for compensation even if tuberculosis was not recognized as a compensable disease in the province in which they worked.

The regulations made in 1948 governing the payment of compensation to employees who contracted tuberculosis in the course of their employment are now rescinded.

The new regulations made under P.C. 4411 and gazetted November 26 prescribe the conditions under which compensation is payable, the amount payable, and the manner in which compensation is to be determined.

As provided in the Act, an employee disabled by a disease arising out of his employment, and his dependants, are entitled to the same compensation as persons employed by private employers would receive under the Act of the province in which the disease is contracted. The employee's right to compensation and the amount payable are to be determined by the provincial Workmen's Compensation Board.

The regulations, like the Act as amended in 1950, provide that where a person ordinarily resident in the Yukon or Northwest Territories contracts a disease while employed in the Yukon or Northwest Territories, the disease is deemed to have been contracted in the province of Alberta.

If a person ordinarily resident in a province other than the Yukon or Northwest Territories contracts a disease while employed in either of those Territories, the disease is deemed to have been contracted in the province of which he is a resident. Similarly, where an employee, other than one employed locally outside Canada, is disabled or his death is caused by a disease contracted while employed outside Canada, compensation is payable according to the Act of the province in which he was ordinarily resident before entering such employment outside Canada.

Where the Deputy Minister of National Health, or a person designated by him, considers that employees are exposed in the course of their employment to the hazards of disease, he may specify preventative and control measures and advise the officers of the Government department or agency which employs the workers concerned that such measures should be instituted. If the preventative measures include periodic medical examinations, the regulations require complete medical records to be kept including data respecting laboratory findings or results of examinations by special methods, together with any other information which may be required for the adjudication of claims.

The Minister of Labour is authorized to make arrangements with the Department of National Health and Welfare, the Department of Veterans Affairs or any other agency of the federal Government to provide for the use of the services of medical and health officers or other services as may be required for carrying out medical examinations or otherwise disposing of claims for compensation under the Act.

PROVINCIAL

Alberta Licensing of Trades and Businesses Act

New general regulations respecting the granting of licences under the Licensing of Trades and Businesses Act were made on October 1 and gazetted October 15. The Act gives the Minister of Industries and Labour authority to designate any business as one to which the Act applies, to provide for the licensing of all persons engaged in the business, and to prohibit the carrying on of such business by a person without a licence. Most businesses operate under permanent licence instead of a yearly renewal procedure. The general regulations now specifically prohibit a person from using a licence for any purpose other than for the operation and carrying on of the trade or business for which the licence was issued.

Further, it is now provided that the owner of a restaurant or baking business, in applying for a licence, need not include with his application a certificate from the Local Medical Health Officer if the restaurant or bakery appears on an approved list of Class "A" restaurants and bakeshops issued by authorized health authorities. Other amendments, chiefly concerning licence fees, were of a minor nature.

British Columbia Hours of Work and Minimum Wage Acts

Exemptions

Temporary exemption from the provisions of the British Columbia Hours of Work Act restricting working hours to eight in a day and 44 in a week may now be granted in certain cases by inspectors of the Department of Labour, in all parts of the province except Vancouver and Victoria. Previously, exemption from the Hours of Work Act could be granted only by order of the Board of Industrial Relations.

Inspectors are now authorized to grant exemptions for periods not exceeding two weeks to industrial undertakings in exceptional cases of pressure of work and to issue a written permit allowing working hours of any employee in such an undertaking to exceed the statutory limits.

This new provision was contained in an order of the Board made November 7 and gazetted November 13.

Workers in Shops—Christmas Season

The annual regulation allowing employees in the mercantile industry to work additional hours during the Christmas season was issued on October 30 and gazetted November 6. Workers in retail stores were permitted to work up to 48 hours during the week ending December 27, four hours more than the weekly limit set by the Hours of Work Act, provided they did not work longer than 10 hours in any one day.

67040—8½

The minimum wage order issued each year to provide for the payment of overtime rates to store employees working extra hours during Christmas week and to require temporary employees in stores during the Christmas season to be paid the minimum wage for experienced workers was gazetted on November 6 (Supplementary Order 24, 1952).

Employees who were permitted by the special hours of work regulation to work up to 48 hours during the week ending December 27 were required to be paid the usual overtime rate of one and one-half times the regular rate for all time worked in excess of eight hours in a day or 44 hours in the week.

For the period from December 1 to December 31, temporary employees in the mercantile industry who worked 39 hours or more per week had to receive at least $18 per week, the minimum rate set by Order 24 for full-time workers in the industry, and those who worked fewer than 39 hours, a minimum hourly rate of 47 cents.

The order also waived for the month of December the daily guarantee provision of Order 24 which requires employees asked to report for work to be paid at their regular rate for all time spent at their employer's place of business with a minimum of two hours' pay if there is no work and of four hours' pay if they are put to work.

Newfoundland Old Age Assistance Act

New regulations, repealing and replacing regulations made earlier in 1952, have been issued under the Newfoundland Old Age Assistance Act. Several provisions setting out the conditions under which an allowance may be paid are now omitted, since they are included in the federal Act or in the federal old age assistance regulations approved by P.C. 6596 (L.G., March, 1952, p. 310), which are now adopted as regulations under the Newfoundland Act. The only other new provision is that every field worker of the Department of Public Welfare is now designated as an investigator under the Act.

The new regulations, gazetted November 4, are retroactive to April 1, 1952.

Newfoundland Blind Persons Allowances Act

New regulations, also gazetted November 4 and retroactive to April 1, were made under the Newfoundland Blind Persons Allowances Act. They adopt the regulations under the federal Blind Persons Act, P.C. 6595 (L.G., March, 1952, p. 312), as regulations under the Newfoundland Act. They are in the same form as the old age assistance regulations noted above and contain the same new provision.

Ontario Vocational Education Act

The Provincial Institute of Trades was recently established (O. Reg. 296/52 and O. Reg. 311/52) in Toronto under Section 17 of the Vocational Education Act as a provincial polytechnical institute for advanced technical training required in any branch of industry. The courses of study, subjects and time allotments for subjects to be taught at the Institute are prescribed by the Minister of Education. These regulations have now been issued under O. Reg. 327/52, gazetted November 22.

The trades taught at the Institute are ten of those designated under the Apprenticeship Act, namely, bricklayer, carpenter, electrician, mason, motor vehicle repairer, painter and decorator, plasterer, plumber, sheet metal worker and steamfitter. The subjects to be taught are set out in a schedule for each trade, the same subjects being taught for bricklaying and masonry. The time allotted for each course of study is, in most cases, two months.

Quebec Minimum Wage Act

An increase of 10 per cent in all minimum rates set by General Order 4, 1942, which applies to unorganized workers in factories, shops, offices, hotels and restaurants and other workplaces to which special orders do not apply, was approved by O.C. 1173 on November 6 and came into effect on November 15.

According to the press, some 990,000 workers are covered by this Order. This is the third general increase in minimum wages under Order 4 since 1950. In November of that year the rates were increased by 20 per cent and in November 1951, they were raised by a further 10 per cent (L.G., 1951, p. 247; Jan., 1952, p. 66).

With the latest increase, the minimum rates for factory, shop and office workers are now 51, 46, 41 and 36 cents per hour, depending on the zone in which the workplace is located.

Saskatchewan Social Aid Act

An amendment to the regulations which permit the payment of supplementary allowances of $2.50 a month to certain recipients of old age security provides that these supplementary allowances may not

be paid to Indians as defined by the Indian Act. The amendment was approved by O.C. 2344/52 on October 24 and gazetted November 1. A similar provision excluding Indians was recently added to the regulations under the Alberta Supplementary Allowances Act (L.G., Sept., 1952, p. 1234).

The regulations approved by O.C. 2313/51 (L.G., 1951, p. 316) providing for a supplementary payment not exceeding $2.50 a month to Saskatchewan residents receiving blind persons' allowances were repealed and replaced by O.C. 2263/52, made on October 10 and gazetted November 1.

The new regulations are substantially similar to those they replace, in that they provide for the payment of a supplementary allowance not exceeding $2.50 a month to a person for whom Saskatchewan pays the provincial share of a blind person's allowance and who resides in Saskatchewan or in a province with which Saskatchewan has an agreement respecting the payment of supplementary allowances.

The earlier regulations did not cover persons whose blind persons' allowances were not chargeable to the province of Saskatchewan. A new provision makes eligible for the supplementary allowance a person to whom Saskatchewan was paying the provincial share of a blind person's pension under earlier legislation at the end of 1951, even if his present blind person's allowance is not chargeable to Saskatchewan.

Also eligible for the supplementary allowance is any other recipient of a blind person's allowance who has resided in Saskatchewan for at least one year and is not receiving a supplementary allowance from any other province.

Saskatchewan Workmen's Compensation (Accident Fund) Act

Members of the International Brotherhood of Locomotive Engineers will be covered by the Workmen's Compensation (Accident Fund) Act from January 1, 1953. The application of the Brotherhood to be brought under the Act was approved by an Order in Council (2446/52) on October 31, and gazetted November 15.

Most classes of railway workers are still under the earlier Workmen's Compensation Act, under which compensation is recovered by action against the individual employer. The Workmen's Compensation (Accident Fund) Act permits any of these classes to come within its provisions on a majority vote of the members of their organization. Members of the Brotherhood of Locomotive Firemen and Enginemen came under the Act on April 1, 1948 (L.G., 1948, p. 626) and members of the Brotherhood of Railroad Signalmen on February 20, 1951 (L.G., 1951, p. 553).

(Continued from page 49)

wood products and iron and steel groups and 10 in the transportation equipment industry.

Of the 53 accidental deaths reported in the mining industry during the quarter under review, 30 occurred in metalliferous mining and 13 in coal mining. In the previous three-month period, 55 fatalities were recorded in mining, including 41 in metalliferous mining and eight in non-metallic mineral mining.

In the transportation industry 50 fatalities were recorded during the third quarter of 1952, as compared with 60 in the preceding three months. In the third quarter of 1951, 50 deaths were recorded.

Thirty-four persons died as a result of accidents in the logging industry during the quarter under review as compared with 36 in the previous three months.

In agriculture there were 30 accidental deaths in the third quarter compared with 15 and 31 during the first and second quarters of 1951 respectively.

In the various branches of the service industry there were 28 fatalities during the third quarter, a decrease of seven from the 35 recorded in the previous three months. In the third quarter of 1951, 32 accidental deaths were recorded.

An analysis of the causes of the 363 fatalities which occurred during the quarter shows that slightly more than one-quarter of the victims had been involved in "collisions, derailments, wrecks, etc." Within this group, the largest number of deaths were caused by automobiles and trucks (39), watercraft (19) and tractor or loadmobile accidents (16). Accidents which involved "being struck by, tools, machinery, moving vehicles and other objects" were responsible for 87, or 24·0 per cent of the total deaths during the period. These included 13 fatalities caused by objects "falling or flying" in mines and quarries and 10 in each of the classifications falling "trees and limbs" and "automobiles and trucks". In the classification "falls and slips" 62 accidents were reported. Of these, 55 were caused by "falls to different levels".

The largest number of fatalities was recorded in Ontario, where there were 109. In Quebec, there were 87 and in British Columbia, 66.

During the quarter under review there were 125 fatalities in July, 136 in August and 102 in September.

Decisions of the Umpire under the Unemployment Insurance Act

Digests of two selected decisions rendered by the Umpire

Decision CU-B 859, September 5, 1952

Held: (1) *That the policy or practice followed by The T. Eaton Company in Winnipeg, Man., in respect to retaining married women in its employ is tantamount to a rule within the meaning of Benefit Regulations 5A (1) (b) (i).*

(2) *That while it may happen in some instances that the rule is not applied, nevertheless the exceptions to the rule do not alter the fact that the rule (or the policy) still exists.*

Material Facts of Case.—The claimant, who was married on August 11, 1951, worked as a sales clerk for The T. Eaton Company Limited in Winnipeg, Man., from April 1939, to December 31, 1951. She filed an initial application for benefit on January 8, 1952, wherein it was indicated that her employment terminated because it was against the employer's rule to retain married women in his employ and that "Eatons allowed claimant to remain on staff till now as she was supporting her parents till they got Old Age Pension and until Eatons could replace her". In answer to the question contained in the confirmation of separation: "Was this person separated because of a rule against employing married women", the employer stated: "Yes, dept. policy".

The insurance officer disqualified the claimant from the receipt of benefit for a period of two years immediately following the date of her marriage pursuant to Benefit Regulation 5A (quoted in full in CU-B 772 (L.G., Feb., p. 194)).

The claimant appealed to a court of referees on the ground that she fulfilled the requirement of Benefit Regulation 5A (1) (b) (i). The court unanimously reversed the decision of the insurance officer and the latter appealed to the Umpire.

Conclusions.—The insurance officer has discussed at great length the question of whether The T. Eaton Co. Ltd., in Winnipeg or its departmental heads are, for the purpose of the present case, to be considered the "employer" within the meaning of Benefit Regulation 5A.

There is no doubt that The T. Eaton Co. Ltd., must be considered the "employer" within the meaning of Benefit Regulation 5A. It is the company which is registered as the "employer" with the Unemployment Insurance Commission and which pays contributions under the Act in respect of its insurable employees. Even if the departmental heads were authorized to adopt their own policy in regard to the employment of married women, the company would still be the employer within the meaning of that regulation. Nothing prevents an employer, as principal or through his departmental heads as agents, from having different rules regarding the employment of married women depending on the type and the exigencies of the business.

In any event, I consider that this question is well covered in the following extract from the finding of the court of referees:—

> (1) The Winnipeg stores have full power to lay down what rule should be followed in regard to the employment of married women.
>
> (2) In those stores the power is vested primarily in the Staff Superintendent and the Employment Manager and secondarily in the managers of departments.

In the present case, we are faced with the objective fact of a claimant who contends that she lost her employment through no fault of hers but on account of a rule which her ex-employer (The T. Eaton Co. Ltd. in Winnipeg) has "against retaining married women in his employ" and what has to be decided is whether or not such rule does in fact exist at the place of employment and whether or not she was dismissed in consequence of the application of that rule.

The evidence is abundantly clear that if there is no definite or written rule at The T. Eaton Co. Ltd. in Winnipeg against retaining married women in its employ, there is a general policy or practice against

doing so. As an illustration of this, I need only to quote the following extract from the transcript of the evidence taken before the court of referees:—

> Page 15—(transcript of the evidence)
> (Staff Superintendent of The T. Eaton Co. of Winnipeg):
> Invariably the department policy is not to retain married women. . . .
> (Chairman): Would this be a fair summary of your evidence or rule or policy—when a female employee marries, all of them, without exception are put in the category of employees who are liable to be laid off. Isn't that it? They are put in the category of people who are selected to be laid off when there is a lay-off.
> (Staff Superintendent of The T. Eaton Co. of Winnipeg):
> Yes, that's a fair summary. Subject to marriage, they get in that category depending on the season of the year.

Under the circumstances and taking into consideration the intent and purpose of Benefit Regulation 5A, which is to prevent from receiving benefit those married women who are not genuinely in the labour field and not those who, like the claimant, want to work, I consider that the policy or practice followed by The T. Eaton Co. Ltd. in Winnipeg, in respect to married women is tantamount to a rule within the meaning of that regulation. While it may happen that in some instances the rule is not applied, nevertheless the exceptions to the rule do not alter the fact that the rule (or the policy) still exists.

In view of the difficulties which face the adjudicating authorities when they have to determine whether or not an employer has a rule against retaining married women in his employ, I would suggest—and no doubt the employer's co-operation in that respect can be easily obtained—that clear and direct questions be asked in the separation questionnaire so as to ascertain beyond any doubt what is the real cause of the claimant's separation from employment; whether she asked to be retained in the service of the employer and whether the employer refused to keep her in his employ on account of an established rule, policy or practice.

I might add that if the evidence indicates that a claimant has not asked to be retained in the service of the employer but has voluntarily left her employment because she assumed that she would be dismissed on account of her marriage, the requirement of Benefit Regulation 5A (1) (b) (i) is not met.

The court of referees, in the present case, has found that the claimant was dismissed on December 31, 1951, in consequence of the application of the rule (or the policy) which The T. Eaton Co. Ltd. in Winnipeg, has against retaining married women in its employ and, as I have no valid reason to disagree with this finding, I must dismiss the appeal.

Decision CU-B 862, September 30, 1952

Held: *That employees, who were working on a short-time basis when a stoppage of work due to a labour dispute occurred at the plant where they were employed, were subject to disqualification from the receipt of benefit under Section 39 (1) of the Act for each day of the said stoppage.*

Material Facts of Case.—The claimant worked on a short-time basis as a weaver in a textile mill and received benefit for his compensable unemployed days. On April 2, 1952, he lost his employment by reason of a stoppage of work due to a labour dispute which occurred at the plant where he was employed.

The insurance officer disqualified him from the receipt of benefit under Section 39 (1) of the Act, for the duration of the stoppage of work.

The claimant appealed to a court of referees contending that he should be entitled to the same benefit payments as he received prior to the strike. The court of referees, after having heard the claimant, his representative and two officers of the personnel department of the company, unanimously reversed the decision of the insurance officer.

The insurance officer appealed to the Umpire and at the request of the claimant's representative, an oral hearing was held before the Umpire.

Conclusions.—It is admitted that the claimant lost his employment on April 2, 1952, by reason of a stoppage of work due to a labour dispute within the meaning of paragraph (1) of Section 39 of the Act and that he did not fulfill any of the conditions prescribed in paragraph (2) of the said section.

The only question to be decided is whether his loss of benefit is applicable to each of the days of the stoppage of work or whether, as was decided by the court of referees and as maintained by the claimant's representative, an exception should be made with respect to the two or three last days of each week when, independently of the stoppage of work, he would apparently have been unemployed owing to economic conditions.

According to the court of referees, the relationship of the cause and effect

between the claimant's loss of employment and the stoppage of work due to the labour dispute existed only for the first three or four days of each week.

Even if this could be established beyond any doubt, it is neither within the letter nor within the spirit of the law that the loss of the right to benefit as prescribed in Section 39 be applied in an intermittent manner. It must not be overlooked that the principle on which this section is based is that the Unemployment Insurance Fund must never be used to finance workers who are taking part in a labour dispute.

It stands to reason that during a stoppage of work due to a labour dispute, a claimant cannot in turn be on strike and unemployed within the meaning of the Unemployment Insurance Act. The employees on short-time who are on strike, the same as other striking workers, carry on the fight to obtain better working conditions every day of the week and for as long as an agreement has not been reached with the employer. They cannot rightly contend that for the day on which normally they would have received unemployment insurance benefit they revert to their status of short-time employees.

For these reasons I feel that I must reverse the court of referees' decision and allow the appeal of the insurance officer.

This decision applies to claimants . . . and . . . who made written representations to me and also to all the other claimants who are interested in this appeal and who have not proved that they can fulfill the conditions prescribed in subsection (2) of Section 39 of the Act.

Monthly Report on Operation of the Unemployment Insurance Act

Statistics* for October, 1952, show number of claims increased over previous month but amount of benefit payments made decreased by $146

Unemployment insurance benefit payments in October amounted to $5,710,740 compared with $5,710,886 in the preceding month, and $3,901,854 in October 1951. The number of unemployed days for which compensatory payments were made totalled 1,932,994, as against 1,933,547 in September and 1,567,172 a year earlier.

The monthly report on the operation of the Unemployment Insurance Act, issued by the Dominion Bureau of Statistics, shows that a total of 87,957 initial and renewal claims for benefit were filed in local offices across Canada, compared with 64,703 in September and 82,902 during October 1951. The increase in October was common to all provinces, the largest increases being registered in Quebec and Ontario.

Total claimants on the live unemployment register numbered 127,863 (91,872 males and 35,991 females) on October 31, compared with 108,712 (74,477 males and 34,235 females) on September 30, and 128,373 (79,802 males and 48,571 females) on October 31, 1951. Ordinary claimants accounted for 111,539 of the claimants registered on October 31, while the remainder consisted of 10,379 short-time and 5,945 temporary mass lay-off.

> Comparison of current employment statistics with those for a previous period serves no useful purpose if made on the basis of numbers alone. Consideration must be given to other relevant factors, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Of the 83,418 adjudications recorded for initial and renewal claims, 65,409 granted entitlement to benefit and 7,725 were disallowances (failure to fulfill minimum contribution requirements). Disqualifications were imposed in 14,693 cases, including 4,409 on revised claims, the chief reasons for disqualification being: "voluntarily left employment without just cause" 4,913 cases; "not unemployed" 2,714 cases; and "not capable of and not available for work" 1,729 cases.

*See Tables E-1—E-7 at end of book.

Persons commencing benefit during October numbered 50,848, compared with 43,167 in September and 46,102 in October 1951.

During the week October 25-31, 79,406 beneficiaries received $1,295,050 for 438,084 days of compensated unemployment, compared with 74,309 beneficiaries, $1,242,698 and 420,113 days during the week September 27-October 3. For the week October 27-November 2, 1951, $955,883 was paid to 72,267 beneficiaries on behalf of 384,654 days of proven unemployment.

The average daily rate of benefit for the week under review continued at $2.96 for the third successive month, compared with $2.49 for the week October 27-November 2, 1951.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission show that during October insurance books were issued to 4,220,068 employees who had made contributions to the unemployment insurance fund at one time or another since April 1, 1952.

Employers registered at October 31 numbered 244,880, an increase of 451 since September 30, 1952.

(Continued from page 90)

37 days. The negotiators for the Company were apparently not fully authorized to negotiate the proposed settlement. The Board was therefore obliged to bring in an arbitral award.

The Board recommends as follows. The principle of overtime should be expressly and explicitly included in the contract, because the evidence clearly shows that 7 of 9 ships of the Company sail without pilots or third mates so that the two deck officers frequently have to serve watches totalling 12 hours per day seven days per week. In our opinion this is an undesirable practice and compensatory payment should certainly be made, and the Company should recognize that they are requiring their officers to serve extra time over and above the standard working day, to which they have agreed in Clause 5 of the Contract of last year.

The total compensation for overtime, however, should not be 2½ days pay for each month of service, as the Union requests, but only one day's pay for each month of service. The reason for this is that this will be the first contract signed by a Great Lakes shipping company recognizing the principle of compensation for overtime in this explicit fashion, and we believe that anything in excess of one day's pay for each month of service would place the present company completely out of line with the general practice obtaining on the Lakes. It is not permissible for this Board to attempt to influence future Boards, but it is only fair and proper to record the opinion that we regard one day's compensatory pay for each month of service as the extreme minimum which might be required and we are content to recommend this minimum for the present in order to get the principle accepted. We are not prepared to suggest that it is sufficient compensation for some indefinite time in the future.

In line with these recommendations the relevant clauses of the contract should read as follows:—

(1) Rates of pay should be based on a 30-day month.

(2) Deck officers shall receive for a full season's service in lieu of leave 24 days pay.

(3) Deck officers shall be compensated for all overtime and Sunday work at the rate of one day's pay for each 30 days of service.

(4) For deck officers serving for less than the full season, an allowance of 4 days pay in lieu of leave and one day's pay as compensating for overtime for each month of service, a total of 5 days for each month of service.

We have the honour to be, Sir, your most humble and obedient servants,

(Sgd.) B. S. Keirstead,
Chairman.

(Sgd.) John Bumbray,
Company Representative.

(Sgd.) M. Swerdlow,
Union Representative.

The Company Representative agrees with the award of 35 days but is in favour of leaving Clause 11 of the existing contract in its present form.

J.B.

67040—9

Fair Wages Conditions

In Federal Government Contracts

Schedules Prepared and Contracts Awarded during November

Works of Construction, Remodelling, Repair or Demolition

During November the Department of Labour prepared 102 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 118 construction contracts was awarded by the various government departments. Particulars of these contracts appear below.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

(The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and 44 per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".)

Contracts for the Manufacture of Supplies and Equipment

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of Contracts	Aggregate Amount
Agriculture	2	$ 55,563.06
Central Mortgage and Housing Corporation	3	42,066.80
Defence Construction (1951) Limited	2	21,865.00
Defence Production (October report)	190	3,932,056.00
Post Office	12	85,226.07
Public Works	1	7,962.00

Arrears of Wages

During November the sum of $65.22 was distributed on behalf of one employer to two employees who had been paid less than the required rate of wages on one Government contract.

Contracts Containing Fair Wages Schedules Awarded during November

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

The Fair Wages Policy of the federal Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the federal Government's Fair Wages Policy is given in the LABOUR GAZETTE for July, 1946, p. 932.

Municipal Government Service

Wage increases and tendency towards shorter work week for municipal employees indicated by October 1952, survey of 71 Canadian centres

An analysis of returns received from 71 Canadian municipalities in the October 1952 survey of wages and salaries indicates wage increases in the majority of centres and evidence of a shortening standard work week. In the accompanying table, the most recent information on wages and hours is shown for policemen, firefighters, and labourers employed in works, sanitation and engineering services.

Each year, the Economics and Research Branch of the Department of Labour surveys some 16,000 industrial establishments requesting information on wages and working conditions. This year, the survey is divided into two parts, with information on wages and hours being obtained in October and information for certain aspects of working conditions in April.

The present article is the first of a series based on results of the October 1952, survey. Succeeding issues of the *Labour Gazette* will contain similar articles on other industries.

Wage Rates and Salaries

The table shows the maximum basic salaries* for police constables and firefighters and hourly wage rates for civic labourers as well as standard hours per week in 71 cities, immediately prior to October 1, 1951 and 1952. Police conconstables in 58 of these cities received salary increases ranging from $60 per year in Fort William to $598 in Trois Rivières. The average increase for the 58 cities was $307. Salaries reported ranged from $2,160 per year in Charlottetown to $3,816 in Vancouver, with the majority of the municipalities reporting between $2,800 and $3,500 per year.

In Fredericton and Brandon, firefighters were receiving $2,400 per year in October 1952, while in Vancouver they received $3,816. The largest number of salaries reported was in the range $2,600-$3,500 with 35 of the municipalities reporting over $3,000. There was considerable variation in the size of the increases, the lowest being $39 and the highest $632; the average in those cities showing increases was $311 per year. Sixteen cities paid their firemen the same annual salaries as police constables.

The hourly wage rates shown for labourers apply to Works Department employees. In some cases where ranges of rates are given, the lower figure represents the starting wage rate and the higher one the maximum rate paid to labourers, generally to those engaged in more arduous or difficult work or to those who have received a length-of-service increment. The hourly wage rates paid in October 1952, to civic labourers varied from 70 cents an hour, the basic rate in Charlottetown and Quebec to $1.50 in Prince Rupert. The size of the hourly increases ranged from one cent per hour in Nelson to 22 cents in Montreal and Calgary. For the 56 centres in which increases were given, the average was 11 cents an hour.

Hours of Work

A tendency towards a shorter standard work week for police departments is revealed by the most recent survey. In October 1952, the predominant work week for policemen was still 48 hours, although there was a substantial increase over 1951 in the number of localities whose police departments were on a 44-hour week.

* The "maximum basic salary" for police constables and firefighters is the salary paid after the probationary and training period has been completed, frequently from three to five years, but before long-term service increases are obtained. It includes cost-of-living bonuses, wherever paid, but does not include allowances for uniforms, boots, transportation, etc. In almost every instance, the salaries listed are those received by the majority of the police constables or firefighters in each of the communities.

NOTE:—The rates shown below are preliminary but little or no change is expected in the final figures.

Consistent with the prevalence of the 48-hour schedule is the predominance of the six-day week, with police departments in more than half the centres operating on this basis; 13 centres, seven of which were in Alberta and British Columbia and three in Ontario, reported a five-day week, usually of 40 hours, and 13 others, a week of 5½ days.

Firefighters in most centres in Eastern Canada operate on the "two platoon" system—10 hours by day and 14 by night, with 56 hours being the predominant work week. In a typical fire department, these shifts are arranged over six-week cycles in such a manner as to average 56 hours. Under this system, all work weeks are not of uniform length, but vary between 40 and 80 hours. In the western provinces, where the "three platoon" system is used, the 48-hour week is more common.

The five-day week was found to be more prevalent in the fire departments than among police. Of 29 centres reporting a standard week of 56 hours for firefighters, 20 reported an arrangement of working time averaging five days a week. The 48-hour schedules reported were usually spread over either four or six days, in most cases the latter.

In the works, sanitation and engineering departments, the 44-hour week was predominant, as was the 5½-day schedule. Next in frequency was the 48-hour and then the 40-hour week. Very few changes in standard weekly hours took place since the 1951 survey. The five-day week was in effect for employees of this branch of municipal service in 20 centres.

Prices and the Cost of Living*

Consumer Price Index, December 1, 1952

Dropping to the lowest point reached in 1952, the Dominion Bureau of Statistics consumer price index decreased 0·26 per cent from 116·1 to 115·8 between November 1 and December 1. The decline came at the end of a six-month period during which the index remained almost unchanged.

Foods were the only group to register a substantial change, the food index dropping from 115·7 to 114·1 as the result of a larger-than-seasonal drop in the price of eggs and slightly lower prices for canned fruits and vegetables, grapefruit, potatoes and pork. Somewhat higher prices were quoted for other fresh fruits and vegetables, cheese, butter and some cuts of beef.

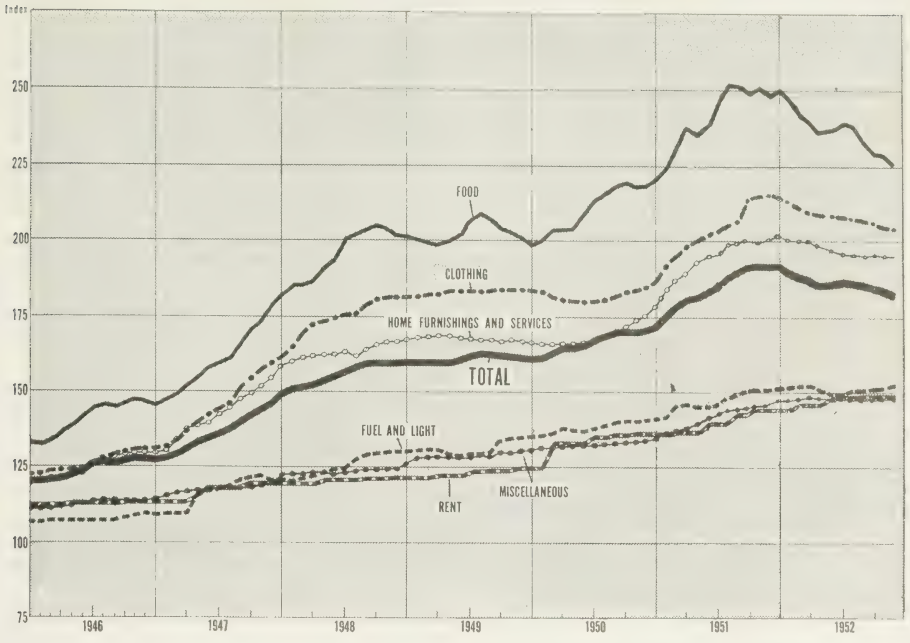
These price changes were in combination with seasonally lower consumption of bananas, fresh tomatoes and pre-cooked meats and higher seasonal consumption of fats, canned pears and lamb.

The clothing index declined fractionally from 109·8 to 109·7. Slight decreases in men's and children's wear were partially offset by a small advance in the footwear index.

Within the household operation group, lower prices for household textiles, supplies and services were overbalanced by increases in the price of anthracite coal. The group index increased from 115·9 to 116·1.

The index of other commodities and services remained unchanged at 116·6.

The shelter index advanced from 121·4 to 122·2 under the influence of a 0·9-per-cent increase in the rent component and a 0·3-per-cent advance in the home-ownership series.



The consumer price index at December 1, 1951, was 118·1; the group indexes were: food, 122·5; shelter, 118·2; clothing, 115·2; household operation, 116·4; and other commodities and services, 115·0.

Cost-of-Living Index, December 1, 1952

The cost-of-living index decreased 0·32 per cent, from 184·8 to 184·2, between November 1 and December 1, 1952. At December 1, 1951, it stood at 191·1.

The food index dropped from 229·0 to 226·1; a year ago it was 249·3. The rent index increased from 148·9 to 149·9; at December 1, 1951, it stood at 144·8. The fuel and light index advanced from 151·1 to 152·7; a year earlier it was 150·8. The clothing index dropped a fraction, from 205·5 to 205·4; at the same date a year ago it was 215·5. The home furnishings and services index declined fractionally from 195·5 to 195·3; a year earlier it was 200·6. The miscellaneous index remained unchanged at 148·8, up from the December 1, 1951, level of 144·9.

*See Tables F-1 to F-6 at end of book.

City Cost-of-Living Indexes, November 1, 1952

Cost-of-living indexes for six of the nine regional centres declined between October 1 and November 1 while three advanced. Mixed changes in food prices were recorded in all centres. Higher prices for eggs and butter and lower prices for beef and lamb were general.

Clothing indexes moved down in eight cities, mainly because of decreases in men's overcoats and women's hosiery prices. Fuel and light indexes were unchanged in six cities. Coal prices were higher in Montreal and Saint John. Decreases in rugs, sheets and brooms were recorded in the home furnishings indexes in most centres. Substantial increases in towel prices were reported in Montreal and Toronto.

In the miscellaneous group, small decreases in toilet soap were noted in a few cities. Increases in barbers' fees were registered in both Halifax and Edmonton, while theatre admissions rose slightly in Saint John and Montreal. Rents were not surveyed between October 1 and November 1 and the indexes remained unchanged.

Composite city cost-of-living index point changes between October 1 and November 1 were as follows: Halifax, +0·7 to 174·7; Saskatoon, +0·6 to 182·1; Vancouver, +0·3 to 187·6; St. John's,—0·5 to 102·5; Toronto, —0·4 to 181·4; Winnipeg, —0·3 to 177·2; Edmonton, —0·3 to 176·7; Saint John, —0·2 to 181·4; Montreal, —0·2 to 189·6.

Wholesale Prices, November 1952

Wholesale prices were slightly firmer in November. The general wholesale price index rose from 221·0 for October to 221·9 for November. Changes in the major group indexes were only fractional; six advanced, two declined.

Animal products moved up from 233·1 to 235·4, reflecting strength in livestock, notably steers, meats, butter, cheese and hides, which outweighed decreases in eggs and fishery products. Firmer prices for newsprint and woodpulp, which reflected declining strength in the Canadian dollar, coupled with an increase in furniture prices, moved the index for wood, wood products and paper from 290·8 to 293·4.

Higher prices for vegetable oils, grains, tea and canned fruits overbalanced decreases in raw leaf tobacco, automobile tires and milled feeds. Chemicals and allied products moved from 175·9 to 176·4 as a result of firmer quotations for glycerine and tanning materials, which overbalanced weakness in paint materials. Iron and its products changed from 221·1 to 221·2, following higher quotations for hardware and wire, while advances in

building stone and sulphur were reflected in an increase in non-metallic minerals from 173.4 to 173·5.

In fibres, textiles and textile products, lower prices for raw cotton and cotton fabrics outweighed strength in raw wool and wool cloth to reduce the group index from 245·6 to 244·8. The group index for non-ferrous metals declined from 168·1 to 167·6, because of continuing declines in lead and zinc. Quotations for gold, silver and tin were firmer in this section.

Canadian farm product prices at terminal markets moved up from 221·3 to 222·9, because of strength in animal products. The index for this latter series registered a gain from 263·0 to 266·5, reflecting a firmer tone for livestock prices, fowl and raw wool, which overbalanced weakness in eggs. Field products declined from 179·7 to 179·2, mainly because of lower prices for raw leaf tobacco.

The index for residential building materials declined from 284·3 to 283·9 between October and November, largely reflecting lower prices in the paint and glass and plumbing and heating sections. In the "other materials" group, an increase in wire nails advanced the index from 227·4 to 228·8.

Strikes and Lockouts

Canada, November, 1952*

Strike idleness, which declined sharply during November, was the lowest recorded for any month this year. Work stoppages causing the greatest amount of time loss were: copper refiners at Montreal, Que.; rayon factory workers at Louiseville, Que.; and cotton factory workers at Hamilton, Ont.

Wage increases and related questions were the central issues in 15 of the 22 stoppages in existence during the month, causing more than half the total idleness. Two stoppages arose over causes affecting working conditions, two over union questions, one over dismissal of a worker, and two were inter-union disputes.

Preliminary figures for November 1952, show 22 strikes and lockouts in existence, involving 5,084 workers, with a time loss of 44,176 man-working days, compared with 38 strikes and lockouts in October 1952, with 13,322 workers involved and a loss of 165,009 days. In November 1951, there were 22 strikes and lockouts, with 13,074 workers involved and a loss of 38,810 days.

For the first 11 months of 1952 preliminary figures show 205 strikes and lockouts involving 117,021 workers, with a time loss of 2,822,308 days. In the same period in 1951 there were 245 strikes and lockouts, with 91,234 workers involved and a loss of 785,904 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in November 1952, was 0·05 per cent of the estimated working time; 0·18 per cent in October 1952; 0·04 per cent in November 1951; 0·28 per cent for the first 11 months of 1952; and 0·08 per cent for the first 11 months of 1951.

Of the 22 stoppages in existence in November 1952, one was settled in favour of the workers, two in favour of the employers, six were compromise settlements, and three were indefinite in result, work being resumed pending final settlement. At the end of the month 10 stoppages were recorded as unterminated.

(The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes and lockouts of this nature still in progress are: compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; jewellery factory workers at Toronto, Ont., on December 3, 1951; handbag factory workers at Montreal, Que., on August 31, 1951; furniture factory workers at Nicolet, Que., on September 27, 1951; truck drivers and warehousemen at Ottawa, Ont., on January 21, 1952; stamp and stencil factory workers at Hamilton, Ont., on May 20, 1952; and waitresses at Timmins, Ont., on May 23, 1952.)

*See Tables G-1 and G-2 at end of book.

Great Britain and Other Countries

(The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE and in this article are taken, as far as possible, from the government publications of the countries concerned or from the International Labour Office *Year Book of Labour Statistics.*)

Great Britain and Northern Ireland

(The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.)

The number of work stoppages beginning in September 1952, was 155 and 23 were still in progress from the previous month, making a total of 178 during the month. In all stoppages of work in progress, 28,800 workers were involved and a time loss of 106,000 working days caused.

Of the 155 disputes leading to stoppages of work which began in September, 11, directly involving 1,300 workers, arose over demands for advances in wages, and 49, directly involving 4,400 workers, over other wage questions; six, directly involving 1,500 workers, over questions as to working hours: 19, directly involving 4,300 workers, over questions respecting the employment of particular classes or persons; 67, directly involving 4,200 workers, over other questions respecting working arrangements; two, directly involving 100 workers, over questions of trade union principle; and one, directly involving 300 workers, was in support of workers involved in another dispute.

United States

Preliminary figures for October 1952, show 425 work stoppages resulting from labour-management disputes beginning in the month in which 470,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 3,500,000 man-days. Corresponding figures for September 1952, are 475 work stoppages involving 230,000 workers and a time loss of 3,200,000 days.

Selected Publications Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, on inter-Library loan, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

1952 Edition of *Provincial Labour Standards* Now Available

Changes in the standards set by provincial labour laws are noted in each annual edition of the Department of Labour publication *Provincial Labour Standards*, the 1952 edition of which is now available. A reduction in maximum working hours and an increase in minimum wage rates in Edmonton, Calgary, Lethbridge and Medicine Hat; higher general minimum rates in Manitoba, New Brunswick and Quebec; and an upward revision of benefits under the Workmen's Compensation Acts of seven provinces are recorded in the new edition.

The bulletin sets out, in a form which permits easy comparison, the standards set by provincial law with regard to the school-leaving age, minimum age for employment, annual and public holidays, maximum daily and weekly hours of work, minimum wages for boh experienced workers and learners, workmen's compensation benefits payable in case of death or disability, and the provision made for a weekly rest-day. Workplaces dealt with in the tables are mines, factories, shops, offices, hotels and restaurants.

Copies of this mimeographed bulletin may be obtained from the Legislation Branch, Department of Labour.

NOTE—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

* Population figures given are as at June 1, for 1952, 1951; Sept. 1, for 1950; and June 1, for 1944, 1939.

† Comparable statistics are not available.

[1] Labour Force Survey figures given are as at August 16, 1952, August 18, 1951 and August 19, 1950. Estimates are based on 1951 census. Detailed figures will be found in tables A 4—A 7 of the December issue of the Labour Gazette.

[2] Real earnings computed by dividing the Consumer Price Index into the average weekly earnings index base: average 1949 = 100.

[3] Newfoundland is included after April 1, 1949.

[4] Average 1935–39 = 100.

[5] Year end figures.

[6] Figures for 1939–44 are production data rather than shipments.

[7] Effective August 1, 1952, claimants on temporaty mass lay-offs excluded from total of claimants.

[1] Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. The non-durable group includes the remaining manufacturing industries.

[2] Mainly hotels, restaurants, laundries, dry cleaning plants and business and recreational services.

TABLE C-4.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Man-Hours and Hourly Earnings. D.B.S.

Tables C-4 to C-6 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

D—National Employment Service Statistics

Tables D-1 to D-7 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Form UIC 751: This form provides a cumulative total for each month of all vacancies notified by employers, applications made by workers, and referrals and placements made by the National Employment Service. Also reported are the number of vacancies unfilled and applications on file at the beginning and end of each reporting period. Because the purpose of these data is to give an indication of the volume of work performed in various local National Employment Service offices, all vacancies and applications are counted, even if the vacancy is not to be filled until some future date (deferred vacancy) or the application is from a person who already has a job and wants to find a more suitable one.

Form UIC 757: This form provides a count of the number of jobs available and applications on file at the end of business on a specified day. Excluded from the data on unfilled vacancies are orders from employers not to be filled until some future date. The data on job applications from workers exclude those people known to be already employed, those known to be registered at more than one local office (the registration is counted by the "home" office), and registrations from workers who will not be available until some specified future date.

Claimants for unemployment insurance benefits who are subject to a temporary mass lay-off are not registered for employment, and thus are not included in the statistics reported on form UIC 751 nor in the main figures in form UIC 757. A temporary mass lay-off is defined as a lay-off either for a determinate or indeterminate period which affects 50 or more workers and where the workers affected, so far as is known, will be returning to work with the same employer. Commencing 15 days after the date of such a lay-off, claimants still on the live insurance register are registered for employment on their next visit to the office and henceforth are counted in both statistical reporting forms. Persons losing several days' work each week and consequently claiming short-time unemployment insurance benefits are not included in either statistical reporting forms unless they specifically ask to be registered for employment.

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1952 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to November, 1952				
MINING—				
Copper refiners, Montreal, P.Q.	1	500	10,000	Commenced July 14; for a union agreement; partial return of workers; unterminated.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Rayon factory workers Louiseville, P.Q.	1	400	8,000	Commenced March 10; for a new agreement providing for increased wages, union shop, check-off and other changes following reference to arbitration board; unterminated.
Hat and cap factory workers Amherst, N.S.	1	100	50	Commenced September 16; for a union agreement providing for increased wages, reduced hours from 44 to 40 per week, pay for five statutory holidays, twoweeks' vacations with pay and time and one-half for overtime following reference to conciliation board: terminated November 1; plant dismantled; indefinite.
Cotton factory workers, Hamilton, Ont.	2	745	8,700	Commenced October 1; inter-union dispute *re* bargaining agency; work resumed at one establishment by November 17; unterminated.
Clothing factory workers, Quebec, P.Q.	1	65	650	Commenced October 30; for a union agreement providing for increased wages; terminated November 14; negotiations; compromise.
Miscellaneous Wood Products—				
Wood furniture factory workers, Durham, Ont.	1	75	1,500	Commenced July 21; for a union agreement providing for increased wages; union security, two weeks' vacations with pay and pay for seven statutory holidays following reference to conciliation board; unterminated.
Prefabricated housing factory workers, New Glasgow, N.S.	2	140	1,000	Commenced October 27; inter-union dispute *re* bargaining agency, terminated by November 18; return of workers pending reference to Labour Relations Board; in favour of workers.
Metal Products—				
Truck and trailer body factory workers, Weston and Swansea, Ont.	2	290	290	Commenced August 25; for a new agreement providing for increased wages and extension of vacation plan following reference to conciliation board; terminated November 3; negotiations; compromise.
Structural steel factory workers, New Glasgow, N.S.	1	250	125	Commenced October 29; protesting dismissal of a worker; terminated November 1; return of workers pending reference to an umpire; indefinite.
Shipbuilding—				
Machinists, welders, etc., Liverpool, N.S.	1	300	600	Commenced September 15; for increased wages; terminated November 4; return of workers pending reference to a Commissioner; compromise.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1952 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to November, 1952—Concluded				
TRANSPORTATION AND PUBLIC UTILITIES—				
Other Local and Highway—				
Bus drivers, Sydney, N.S.	1	32	575	Commenced August 19; for a new agreement providing for increased wages following reference to conciliation board; terminated November 21; conciliation; compromise.
TRADE—				
Steel products warehouse workers, Vancouver, B.C.	1	24	480	Commenced October 1; for a new agreement providing for increased wages following reference to conciliation board; unterminated.
Strikes and Lockouts Commencing During November, 1952				
MINING—				
Coal miners, Thorburn, N.S.	1	236	236	Commenced November 4; dispute *re* allocation of work; terminated November 5; return of workers; in favour of employer.
MANUFACTURING—				
Boots and Shoes (Leather)—				
Shoe factory workers, Grand'Mere, P.Q.	1	200	800	Commenced November 26; for a new agreement providing for increased wages, union shop, check-off, pay for additional statutory holidays, seniority, rest periods, and hospital and accident insurance plans, following reference to arbitration board; unterminated.
Textiles, Clothing, etc.—				
Clothing factory workers, Sorel, P.Q.	1	287	2,870	Commenced November 3; for a union agreement providing for increased wages and against alleged discrimination in dismissal of two workers; terminated November 14; conciliation; compromise.
Woollen cloth factory workers, Renfrew, Ont.	1	165	165	Commenced November 12; for a new agreement providing for increased wages, reduced hours from 48 to 44 per week with same take-home pay and closed shop following reference to conciliation board; terminated November 13; negotiations; compromise.
Clothing and hosiery factory workers, Montreal, P.Q.	2	490	1,960	Commenced November 25; for a new agreement providing for increased wages and other changes following reference to arbitration board; unterminated.
Miscellaneous Wood Products—				
Plywood factory workers, St. Basile de Portneuf, P.Q.	1	81	200	Commenced November 11; dispute over work assignment for one man; terminated November 13; conciliation and return of workers pending reference to arbitration board; indefinite.
Metal Products—				
Foundry and machinery factory workers, Hamilton, Ont.	2	175	150	Commenced November 3; to attend a union meeting; terminated November 3; return of workers; in favour of employer.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1952 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars[2]

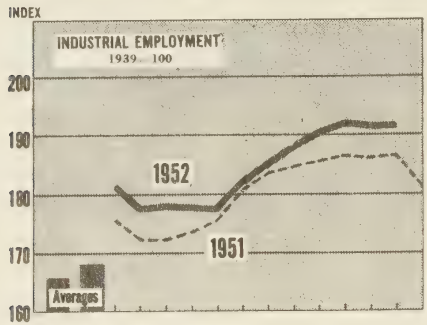
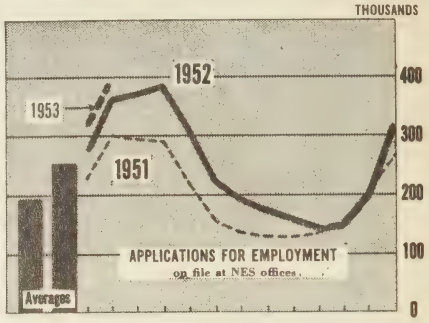
CURRENT manpower and labour relations REVIEW

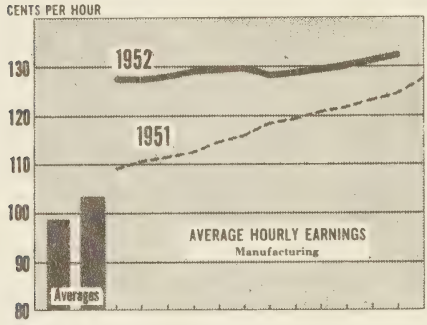
Current Labour Market



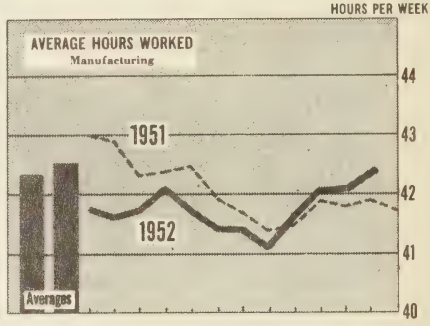
THE overall level of employment in Canada continued its usual seasonal downward movement in January. This decline mainly reflects the usual contraction of employment at this time of the year in such industries as logging, construction, fishing and shipping. It also reflects the usual post-Christmas lull in retailing activity and machinery overhaul and stocktaking which occur in many industrial plants about the beginning of the year. As a result, the number of labour market areas in the labour surplus categories is now reaching its peak. The comparison with last winter is much the same as in December, 1952, economic activity in the urban industrial regions showing greater strength and activity in the smaller rural areas, particularly those in Eastern Canada associated with logging, showing a decline.



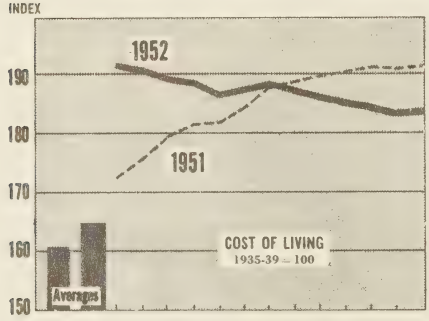
The Monthly Labour Force Survey (see footnote (a), page 176), which provides an overall picture of current manpower utilization patterns, estimates that for the week ending January 24, 1953, there were 5,210,000 persons in the civilian labour force, a decrease of 66,000 from the figure reported for the week ending December 13, 1952. Of this total, 4,533,000 persons were at work for 35 hours or more during the week, a decline of 25,000 from December 13; 321,000 were at work for fewer than 35 hours, a decrease of 138,000; 169,000 had jobs but were not at work, an increase of 42,000; 187,000 were without jobs and seeking work, an increase of 55,000 from the previous month.



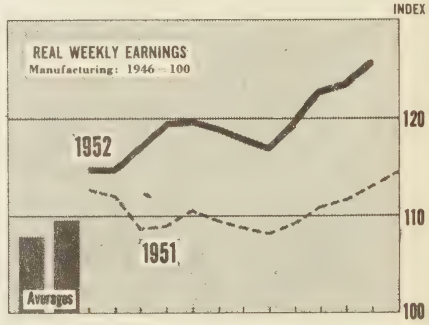
Of the 321,000 persons working fewer than 35 hours during the week, about 198,000 usually work part time. Of the remaining 123,000, 35,000 were on short time, 10,000 were on temporary lay-off part of the week, 32,000 were away because of illness and 14,000 because of bad weather and the remainder, 32,000, were not at work because of vacations, industrial disputes or because they had either lost or found a job during the week.

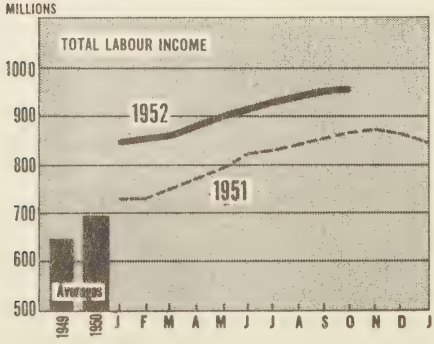


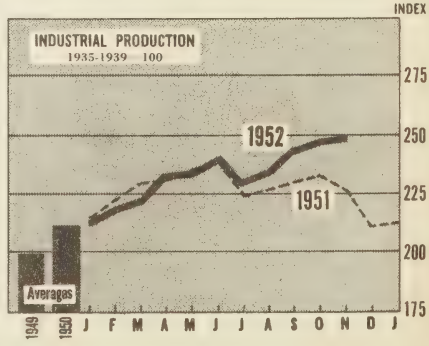
A Labour Gazette Feature by Economics and Research Branch Department of Labour, Ottawa



CURRENT LABOUR TRENDS







Of the 169,000 persons estimated to be with jobs but not working at all during the survey week, illness (74,000), vacations (18,000) and lay-offs (47,000) were the main reasons for their idleness. Lay-offs in this category were nearly double those of the previous month. Bad weather and industrial disputes were other contributing causes.

It was estimated that 187,000 persons were without jobs and seeking work during the survey week. Another 11,000 persons who worked only part of the week were also actively seeking other work, making a total of 198,000 persons actively seeking work during the week ending January 24. This represents an increase of about 34 per cent from the previous survey week in December.

Supplementary information is available from data on registrations for employment at local NES offices (see footnote (b), page 176). Between December 1, 1952, and January 22, 1953, a period which usually shows the sharpest seasonal decline in economic activity, the number of applications on file rose by about 147,000 for all regions, bringing the total to 384,200 at the later date. The regional pattern at January 22, was much the same as during the previous month, the applications on file in Quebec (122,600) and in the Atlantic Region (53,800) both being significantly higher than at the same date a year ago. On the other hand, applications for jobs in Ontario (94,700) were nearly 12,000 lower than a year earlier, while applications on hand in the Prairie Region (53,000) and in the Pacific (60,100) were only moderately higher.

The year-to-year change in the regional picture indicated above illustrates the shift in the general pattern of economic activity which has developed over the year. Employment levels in the industrialized urban areas, while seasonally low, are much higher than in the winter of 1951-1952. Information available on general economic activity confirms this strong upward movement in industrial activity. The index of industrial production, for example, was about 10 per cent higher during November than a year earlier. This increase is significant for employment since there have been reductions in inventories in many industries during the last few months. Department stores sales in January were more than 15 per cent higher than in January, 1952, indicating a continuation of the generally higher level of economic activity in Canada this winter compared with last year.

On the other hand, the marked reduction of activity in seasonal industries such as logging has adversely affected employment levels in rural areas and has partially offset year-to-year gains in employment in the industrial regions. Logging employment in Eastern Canada is at present at levels 35 per cent lower than last winter. This reflects the industry's concern about both the size of current log inventories and the uncertainty of some markets for finished products.

The lower pulpwood cut has affected employment in two ways – it has reduced the number of jobs available and shortened the duration of employment in the woods. This has created a problem in the eastern provinces, especially the Maritimes, where construction activity during this winter was also at lower levels than last year. The contrast between the various urban-industrial labour market areas and the rural communities is analyzed in the article on local labour market conditions on page 177.

Labour—Management Relations

DURING the early weeks of 1953, as is customary at this time of year, collective bargaining in Canadian industry involved for the most part comparatively small groups of workers. Negotiations appeared to be influenced by the trends of 1952, although the wage increases in many cases were of somewhat smaller dimensions. Bargaining in these smaller establishments was largely being accomplished without interruption to production. In fact, at mid-February, fewer than 800 workers were on strike. Meanwhile, negotiations likely to be significant for 1953 were about to get under way in several major industries.

It is possible at this time to assess briefly the position of the Canadian worker as a result of developments over the past year. Employment levels in general have been high. There have been substantial increases in wages; for example, average weekly earnings in the nine leading industries stood at $56.08 at December 1, 1952, representing a rise in the previous 12 months of seven per cent. Most of the collective agreements received in the Department of Labour during the same period provided for wage increases of 10 to 15 cents an hour or more (see page 218). Since the cost-of-living index was meanwhile showing its first appreciable post-war decline, the higher wage rates were resulting in increased 'real' earnings for the employees concerned. In fact, the index of average real weekly earnings in manufacturing showed almost as big a rise during the year 1952 as it did in all the other post-war years combined. Although no comprehensive current analysis is available, agreements received in the Department reveal an extension in the application of other benefits, such as shorter hours, more liberal vacation and holiday terms, group insurance plans, etc. (see page 221).

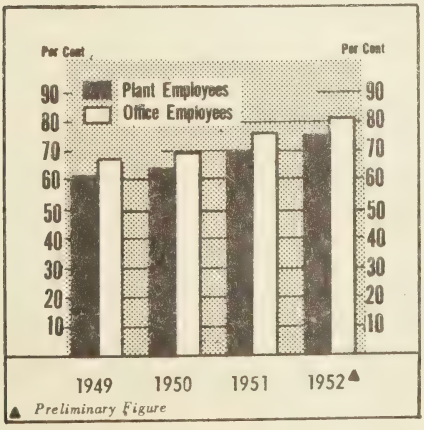
Railway Negotiations. Of the approximately 200,000 workers employed on Canada's railways, the so-called 'non-operating' employees comprise the largest of the bargaining groups, numbering 144,000 workers. Unions representing these workers signed new agreements with the railroads in December. In January, a dispute involving 20,000 workers represented by the Brotherhood of Railroad Trainmen was settled three days before the date set for strike action by the union. Final negotiations took place in Ottawa at the request of the Prime Minister. The settlement included a 12-per-cent increase in wages retroactive to April 1, 1952. For yard employees weekly hours are reduced from 48 to 40 beginning October 1, 1953 and a referee is to decide on the accompanying adjustment in wage rates. Both parties have agreed to bargain further on certain outstanding requests for work rule changes.

Other Negotiations. At mid-February, important bargaining was in progress, or about to commence, in a number of industries including coal mining, electrical goods, shipbuilding, and urban transportation.

In Nova Scotia coal mining, a conciliation board had been requested in a dispute between the Dominion Steel and Coal Corporation and District No. 26 of the United Mine Workers of America (CCL) representing approximately 10,000 miners. The union's requests included a $3.26 per

day increase in wages. In Western Canada, negotiations were in progress between District No. 18 of the United Mine Workers, for some 7,000 coal miners, and the Coal Operators' Association.

The United Electrical, Radio and Machine Workers (independent) had opened negotiations with Canadian General Electric covering about 7,000 employees at its Toronto and Peterborough plants. The union was seeking a wage increase and other benefits, and a 40-hour week. Bargaining between this union and the Westinghouse Company at Hamilton will also get under way shortly. A certification vote held recently for employees of the Phillips Electrical Works Limited, Brockville, was won by the International Union of Electrical, Radio and Machine Workers (CIO-CCL).



About 1,000 employees were represented in negotiations between the Port Arthur Shipbuilding Company, the Industrial Union of Marine and Shipbuilding Workers (CCL) and four AFL-TLC unions. Higher wage rates, the 40-hour week, and a welfare plan were the main issues.

In Edmonton, agreement was reached between the city and its 450 bus drivers represented by the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (AFL-TLC). The same union was negotiating with the B. C. Electric Company for more than 3,000 transit workers in Vancouver, New Westminster and Victoria, for a wage increase and other matters. Bargaining between the Montreal Transport Commission and the Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL) was scheduled to begin this month over a proposed wage advance and a 40-hour week for some 5,000 transit workers.

Labour Organization, 1953. Preliminary estimates, based on returns so far received from the 42nd Annual Survey of Labour Organization in Canada place the total trade union membership at 1,185,000 on January 1, 1953, or approximately 40,000 above the figure for the previous year.

Hours of Work. A continuing trend in Canadian manufacturing toward a shorter work week is revealed in preliminary calculations based on returns received from 6,000 establishments as of October, 1952, in the Economics and Research Branch's annual survey of Canadian employers. The percentage of plant employees on a 5-day week at the survey date was 75 as compared with 70 per cent a year earlier; for office employees, it was 81 per cent as compared with 76 per cent in 1951.

Proportion of Employees on a 5-Day Week
Manufacturing Industries

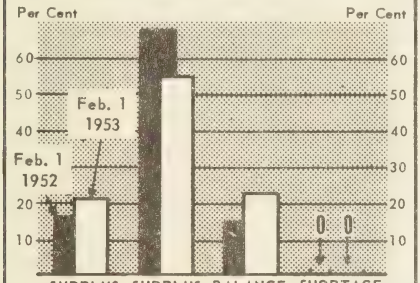
Durables	November	309.4	− 0.3	+10.7
Non-Durables	November	232.4	+ 2.0	+ 9.9



(a) Estimated by DBS on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. Labour force estimates are based on a sample survey of 30,000 households chosen by area sampling methods in more than 100 different areas in Canada. They are subject to sampling error. In general the smaller the estimate, the larger the relative sampling error. The estimates, however, do show the numbers in the various labour force categories with sufficient accuracy for practical purposes.

(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Local Labour Market Conditions

The Labour Market—illustrated by the proportion of paid workers within all areas falling in each of the four labour market groups to all paid workers.

DURING January, there was a decrease of 28 in the number of areas in which labour demand and supply were in approximate balance. The number of areas in Group 2 of the labour surplus category increased by 17 and the number in Group 1 by 11. The changes in Group 1 occurred entirely in the Atlantic and Quebec regions. The complete list of the 115 areas covered in the monthly survey is shown in the table on page 178.

At February 1, 1953, there were nine more minor areas in Group 1 of the labour surplus category and nine less in the balanced category than a year earlier. The year-to-year increase in the number of minor areas in the surplus category is, to a large extent, the result of the small log cut in Eastern Canada this year.

Despite the year-to-year decrease in the number of areas in the balanced category, however, the number of paid workers in this category (see bar chart) increased from 15 to 23 per cent of all paid workers. This apparent contradiction is explained by the fact that, during the interval, the Toronto metropolitan area, with more than 500,000 paid workers, moved from Group 2 of the surplus category to the balanced category.

In evaluating the significance of the number of labour market areas in the various categories of the table below, it is necessary to keep in mind the marked seasonal variations in labour requirements throughout the year in Canada. Each year, from December to March, labour surpluses develop in a large number of areas. These surpluses decline sharply during the spring and shortages often appear between July and October.

Labour Market Areas	Labour Surplus*				Approximate Balance*		Labour Shortage*	
	1		2		3		4

ATLANTIC

Continuing the downward trend of the last quarter of 1952, economic activity in the Atlantic region fell by early February to a level lower than that of the corresponding period last year. The decline was particularly notable in New Brunswick, the only province where non-agricultural employment was lower than a year earlier. Employment in December, 1952, compared with December, 1951, was 40 per cent lower in forestry, six per cent lower in manufacturing, 30 per cent lower in construction and five per cent lower in transportation. Most activities in Nova Scotia showed improvement over this period last year but lumber production for the first seven months of 1952 was only 70 per cent of the 1951 level.

The lower employment level in forestry and the importance of this industry to the region indicate that no appreciable change can be expected in the employment situation before the spring. At the beginning of February, all but one of the twenty labour market areas surveyed had labour surpluses. This compares with 16 surplus areas at the beginning of January and 15 at the beginning of February 1952.

Metropolitan Areas. Job registrations at the NES office in St. John's, Nfld., increased by about 60 per cent during January. Several factors contributed to this sharp increase, the most significant being the reduction of work on local construction sites and slackened activity in outlying areas. In addition, fish canning operations were reduced, timber hauling was delayed by lack of snow, and activity along the St. John's waterfront remained unusually low since newsprint continued to be shipped from the port of Botwood. When this port closes for the winter, however, ships will once again take on their cargo at St. John's. This usually provides employment for about 150 longshoremen.

Major Industrial Areas. By the end of January all six of the areas in this classification were in the labour surplus category. In New Glasgow, job registrations at the NES office increased because of temporary layoffs in woodworking, steel and steel fabricating plants. In Moncton, however, the decline in labour demand was more directly associated with the primary industries. In the four remaining areas, manufacturing employment was unchanged over the month but the non-manufacturing industries were less active. Job opportunities for longshoremen were fewer than in previous years, particularly in Halifax, where it was reported that waterfront activity during January was less than in any comparable period in 25 years.

Major Agricultural and Minor Areas. Logging is the main source of employment in many of these areas during the winter months. The decreased wood cut this season was the principal reason why most of the areas had labour surpluses. Furthermore, sharply reduced exports of pulpwood and pitprops had depressing effects on employment in the smaller shipping centers of northern New Brunswick.

QUEBEC

The increase of employment from last year's low levels in the clothing, leather, and boot and shoe industries continued in 1953 while short time in primary textiles, which had prevailed during most of 1952, largely disappeared. In the heavy manufacturing industries, employment levels have been moving steadily upwards, a trend which is continuing this year. Employment increased by more than 7,000 during 1952 in the transportation equipment industry, which includes aircraft and shipbuilding. During January, however, temporary lay-offs occurred in many manufacturing industries as production schedules were revised, machinery was repaired and industries generally prepared for another year.

As usual, winter weather had reduced many seasonal activities by February 1. Owing to the smaller log cut, this was not offset to the same extent as last year by employment opportunities in woods work. It is the practice for farmers and farmers' sons in Quebec to seek logging employment during the winter and many of these, as well as idle construction workers, truck drivers, longshoremen and others, became available for work during January and early February. All areas in the region reported labour surpluses at the end of the month.

Metropolitan Areas. Hiring was slow in Montreal during most of January but by the end of the month, as workers were rehired in clothing, furniture, food and other industries, employment was increasing. Skilled toolmakers, die setters, machinists and aircraft mechanics were taken on wherever available. In Montreal, however, as in Quebec City, alternative job opportunities were few for workers disemployed in construction, transportation and other seasonal industries. Industrial and commercial building was the main source of construction work and snow removal operations offered fewer jobs than usual for the season. The Montreal area shifted during the month from the balanced to Group 2 of the labour surplus category and Quebec City was once again in Group 1 of the labour surplus category.

Major Industrial Areas. Most industrial areas in the Eastern Townships, where the textile industry predominates, remained in Group 2 of the labour surplus category during the month but two, St. Hyacinthe and Farnham–Granby, recorded a drop in NES applications. The remaining four areas, Lac St. Jean, Rouyn–Val d'Or, Shawinigan Falls and Trois Rivières were in Group 1 of the labour surplus category.

Major Agricultural and Minor Areas. Employment opportunities were few in these areas during January. Some prospecting was under way in Gaspé and Northern Quebec and some workers were retained at the iron-ore development sites at Ungava and Sept Isles; but logging, the main source of employment, offered fewer jobs than usual. All but four of the 15 major agricultural and minor areas fell into Group 1 of the labour surplus category. The remaining four were in Group 2 of this category.

During the winter months there was the usual seasonal reduction in employment in such industries as construction, fishing, food processing, automobile and rubber manufacturing, which are approaching their seasonal troughs. On the other hand, construction employment continued higher than last winter. Employment in most of the manufacturing industries remained fairly stable and above last year's level and, in industries producing defence goods such as aircraft, electronics and radar, it was still expanding.

At February 1, the number of registrations for employment at the NES offices was about 15,000 less than last year's total. The gradual seasonal decline in employment, however, increased the number of areas with a labour surplus from 12 to 25 during the month. At the same time last year, 24 areas representing 77 per cent of wage earners had a labour surplus; the 25 areas in the surplus category this year represent only 42 per cent of all wage earners. Last year, lay-offs in the consumer goods industries created surpluses in the larger industrial centers but this year most surpluses appear to be in seasonally slack industries and in logging centers.

Metropolitan Areas. Employment in the three metropolitan areas declined slightly during January and the early part of February as seasonal reductions in construction and trade continued; but the demand for labour from the manufacturing and service industries enabled Toronto and Ottawa—Hull to continue in the balanced category. Some labour surplus developed in Hamilton by early February following a number of small lay-offs in the iron and steel industry, particularly wire products, and a decline in activity in the construction industry. Machinists, toolmakers, diesetters, and experienced stenographers were still in short supply in Ottawa and Toronto.

Major Industrial Areas. Employment in these areas was generally higher than last year. However, year-end inventory closures and seasonal slackness in the automobile, farm machinery, textile and machine shop industries together with continuing reductions in construction activity during January resulted in a labour surplus in most major industrial areas by the end of the month. Cornwall moved into a higher surplus category as a number of construction tradesmen, sailors and labourers returned to their homes for the winter. Only three of these areas, Guelph, Kitchener and London, had balanced labour markets by the end of January. In Kitchener and London employment was increasing as plants which had closed for holidays and stock-taking at the end of December reopened and as labour requirements in firms with defence contracts continued to increase. Unusually high levels of construction this winter in Guelph and Kitchener produced a strong labour demand in those centers.

Major Agricultural and Minor Areas. Registrations for employment increased in all these areas during January bringing Belleville—Trenton, Goderich, Lindsay, Pembroke, Simcoe and Walkerton into the labour surplus category. Heavy registrations of seamen as well as construction workers moved Owen Sound into a higher surplus group. At the end of January there was some surplus of labour in 12 of the 21 major agricultural and minor areas.

PRAIRIE

Employment by early February, although greater than last year, approached the annual seasonal low point, which in this region is usually reached in the first half of March. Labour surpluses developed in eight additional areas as a result of the post-Christmas lull in retail trade, a further slowdown in construction and the gradual completion of pulp cutting in western Ontario. With these additions there were, at the beginning of February, 16 areas in Group 2 of the labour surplus category and five areas in the balanced category. In contrast to the situation in the Pacific, Quebec and Atlantic regions, there were no areas in Group 1 of the surplus category and the regional ratio of NES job applications to all paid workers was lower than the national total.

The somewhat higher demand for labour in this period of seasonal inactivity is in large part attributable to the profitable farm operations of 1952. Cash returns for the year are expected to exceed the 1951 record, the income from grains more than offsetting a decline in livestock receipts. Moreover, the amount of wheat held on farms at the end of January was one-third greater than it was a year earlier. As more of this wheat is marketed, the income accruing to farmers will provide substantial support to the general level of activity during the remainder of the winter.

Metropolitan and Major Industrial Areas. A further increase of surplus labour in Edmonton and Calgary brought these areas into the Group 2 category. In the three metropolitan areas the heavy lay-offs customary in January took place in retail stores and meat packing firms released the extra workers hired to handle the exceptionally large marketings of livestock in December. Employment in foundries, transportation equipment manufacturing and construction declined but remained above the levels of a year ago. The volume of planned construction in all three metropolitan centers was well ahead of last year's total at this date. Employment in the Winnipeg clothing industry continued to expand.

Pulp cutting employment in the Fort William–Port Arthur area at the end of January amounted to 5,400, almost 50 per cent below the total at the same time in 1952. Logging for the season was largely completed and staffs were gradually being reduced to the number required to bring the winter's cut to the mills. On the other hand, shipbuilding firms and most paper mills were operating at capacity and employment in aircraft manufacturing was gradually increasing.

Major Agricultural and Minor Areas. With outdoor farm work at a virtual standstill, employment in agricultural and minor areas remained unchanged or declined. Work on a number of construction projects was completed during the month or suspended because of the weather. Since alternative employment opportunities in such industries as logging have been less numerous than last winter, seasonal labour surpluses in almost all areas have been greater. In addition, a number of coal mining areas, particularly in Alberta, reported more unemployment and short time. This was attributed to the recent mild weather and the increasing penetration of fuel oil into the market for coal.

PACIFIC

In this region, the last half of 1952 was marked by a reduction in market demand for several important primary products and by an industrial dispute that resulted in the loss of the annual herring harvest. The effects of these developments, in addition to the usual seasonal decline in activity, are revealed in employment statistics for December. Although total industrial employment maintained a margin of three per cent more than the 1951 figure, employment was lower by twenty-three per cent in logging, by forty-three per cent in fish canning and by seven per cent in the iron and steel products industry. In addition, the landed value of the fish catch in the last quarter of the year was $5,330,000, or about one-third less than in the same period of 1951. However, employment reductions in these industries were more than offset by the labour requirements resulting from increased productive capacity in other sectors. The main increases were in construction (41 per cent), mining (11 per cent) and the distributive industries.

Activity during most of January was, as usual, severely restricted by weather conditions. The ten labour market areas covered in the current survey were equally divided between Group 1 and Group 2 of the labour surplus category. There were, however, clear signs of revival at the end of the month. Light snowfall made possible an early resumption of logging and construction workers were being recalled to northern construction projects. By the beginning of February, job applications registered with the NES had declined slightly from the peak of 60,100 reached at January 22.

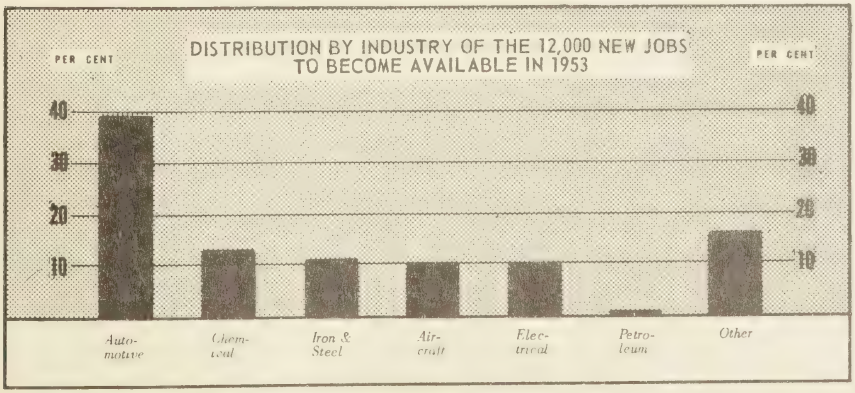
Metropolitan and Major Industrial Areas. The gradual movement of workers back to Vancouver Island and Kitimat eased the situation in Vancouver–New Westminster but not sufficiently to remove the area from Group 1 of the labour surplus category. Fish canning and reduction plants were closed down and were not expected to re-open for some time. Lumber and shingle mills were still operating with reduced crews while awaiting an upturn in market demand. Little change was noted in shipbuilding, machine shops and foundries but the continuing mild weather and an increase in industrial and residential building stimulated employment in the construction industry.

Victoria remained in Group 2 of the surplus category but conditions improved rapidly at the end of the month and were hampered only by excessive rainfall. Shipbuilding employment continued to expand. There are enough contracts on hand to keep the construction industry fully occupied when work can be resumed in this sector and contractors are already forecasting an early shortage of certain skills.

Minor Areas. Job applications at NES offices in most of these areas reached a peak during the third week of January, declining thereafter as the weather improved. The improvement was most noticeable in the Central Vancouver Island area, where logging was expected to be back to normal by the middle of February. At the other inland points, however, employment levels were expected to rise more slowly, since the spring thaw usually retards lumbering operations until March. The situation in the base metal-mining industry in Nelson–Trail and Cranbrook showed little change since heavy lay-offs were still in effect.

Plant Expansion and Employment

Opportunities in Manufacturing, 1953



A total of 12,000 workers will be required during 1953 to staff manufacturing plants in the process of being built or expanded at the beginning of the year, according to the findings of a regular survey by the Economics and Research Branch of the Department of Labour on the effects of industrial expansion on employment. This total is higher than comparable figures for either of the preceding years.

Apart from the large 'carryover' of construction which will be completed this year and will provide 12,000 new jobs, additional expansion work begun and completed during the year will undoubtedly create many more jobs. The larger portion of the 30,000 jobs which became available in 1952 was created in this way.

The distribution by industry of the 12,000 jobs, in terms of labour requirements, shows that they follow the pattern set by the 30,000 jobs created in 1952. In terms of the number of workers needed to operate the completed new facilities, expansion continues to be heaviest in the transportation equipment, electrical apparatus, chemical products, some sectors of iron and steel and the petroleum products industries.

The regional pattern of the jobs shows that 70 per cent will become available in Ontario, 17 per cent in Quebec and the remainder, in diminishing proportions, in the Prairie, Pacific and Atlantic regions.

As in 1952, the transportation equipment manufacturing industry still holds the lead in creating new jobs for 1953. The distribution of new jobs within the industry, however, had changed. In 1952, Canada's expanding aircraft industry created a very high proportion of new jobs, whereas the automotive industry to date is the largest contributor of new jobs for 1953. This is largely because the Ford Motor Company is completing a new plant which will employ from 4,000 to 5,000 workers. The bulk of the aircraft expansion program was completed in 1952 but, of the

estimated total of 6,200 new workers so far required by the transportation equipment industry in 1953, new aircraft plant facilities will provide about 1,300 jobs.

The chemical industry is already expected to provide more new jobs through expansion of manufacturing facilities in 1953 than it did in the whole of 1952, a record year. To date, 1,600 new jobs are expected to become available in 1953 compared with the total of 1,400 in the whole of 1952. Expansion of the petro-chemical industry and in the manufacturing of synthetic textiles is responsible for most of the new jobs. Alberta's booming petroleum and natural gas industry has attracted several large chemical firms to the Edmonton area. One $50,000,000 plant, which is expected to be completed in 1953, will employ about 700 workers; another $10,000,000 plant will employ 200. Expansion in the chemical industry is concentrated at Edmonton, Sarnia and Montreal.

Many Canadian petroleum refineries are still expanding capacity on the basis of growing supplies of western crude oil. In the Sarnia area alone, one large modern refinery was completed in 1952, a second refinery will be built in 1953 and a third is being modernized to increase its capacity greatly. By the time Prairie crude oil reaches British Columbia towards the end of 1953, two large Vancouver refineries will have practically completed expansion of their facilities. Because of the industry's low labour content, however, the number of workers required to man new refinery facilities in 1953 will be relatively small, totalling about 150.

As in 1952, expansion in the electrical apparatus industry is expected to provide a large number of new jobs in 1953. It is estimated that more than 1,300 new workers will be required to man new plant facilities during the year. Most of these new jobs will be in the field of electronics and in the manufacture of industrial electrical equipment of various types rather than in the consumer goods sector. About 900 of the new jobs are expected to be in Ontario and the remaining 400 in Quebec.

To sum up, the carryover of new jobs is relatively large compared with previous years. New job opportunities in 1953, however, based on this carryover, will be largely the result of expansion in four manufacturing industries which will account for 77 per cent of the new workers required and will be concentrated in one area, Ontario, which will account for 70 per cent.

Seasonal factors such as climate and demand affect employment levels in a great many Canadian industries. When the industries most affected by seasonal factors are ranked by percentage seasonal variations in employment, the canned and preserved fruits and vegetables industry comes first, followed in order by forestry (chiefly logging), canned and cured fish, construction, water transportation and carbonated beverages and wines. When Canadian industries are ranked by number of employees whose jobs are seasonal, construction comes first, followed by forestry, retail trade, canned and preserved fruits and vegetables, saw and planing mills and water transportation.

Notes of Current Interest

Settlement Reached, Rail Strike Averted

Slightly more than three days before the scheduled start of a strike, settlement was reached in the dispute between the Brotherhood of Railroad Trainmen and Canada's railways.

A top-level meeting between the two parties in Ottawa following their separate talks with Prime Minister St. Laurent, Hon. Milton F. Gregg, Minister of Labour, and Hon. Lionel Chevrier, Minister of Transport, led to the settlement late Thursday evening, January 29. If agreement had not been reached on their demands, the trainmen planned to strike at 6 a.m. Monday, February 2.

The Prime Minister and his two Cabinet members met first with a group of union representatives led by A. J. Kelly, BRT Vice-President, then with company representatives including President Donald Gordon of the Canadian National Railways and W. A. Mather, President of the Canadian Pacific Railway Company. Later the same day the union and management representatives resumed negotiations, eventually reaching agreement.

The terms of the settlement include a 12-per-cent general pay increase for trainmen retroactive to April 1, 1952, and a 40-hour work week for yardmen. The parties agreed to negotiate further on certain rule changes. No escalator clause was included in the terms of settlement. Pay adjustments to accompany the introduction of the yardmen's shorter work week are to be determined by a referee, appointed by the Prime Minister, whose decision is to be binding.

At the close of the final meeting in Ottawa, the Prime Minister said: "A bright page has been written in the history of labour relations in Canada. Collective bargaining is still a good instrument to deal with labour relations in this democracy."

Opening move in the drawn-out dispute came February 1, 1952, when the CPR gave notice to the Brotherhood to begin negotiations for the revision of the contract. The Brotherhood demanded a 35-per-cent pay increase, an escalator clause and a 40-hour week for yardmen with the same take-home pay.

From February 13 to April 17, company and union representatives met. On April 23 the union requested a Conciliation Board in its dispute with the CPR; on May 13, in its dispute with the CNR. The Board concerning the CPR was established May 13, that concerning the CNR, May 23. Both Boards reported on December 31, 1952.*

On January 7 the railways advised the union they were prepared to implement the recommendations of the Conciliation Board and asked the union to set a date for further talks. The following day the union replied it was unable to arrange a meeting because of a general committee meeting of the brotherhood in Montreal.

On January 16 the union asked for a meeting and said it would strike unless settlement was reached by February 2. In the meeting on January 20 company officials confirmed they would implement the majority report while the union stated it would negotiate only on the basis of the minority report.

On January 26 the companies offered to submit the dispute to a federal Government referee but the union refused.

Canada's only nation-wide railway strike occurred in August, 1950. It involved some 125,000 non-operating railway employees and lasted nine days.

Six More U.S. Railroads Agree to Union Shop

Six more major railroads in the Western United States have signed union-shop agreements with non-operating rail unions.

Signing of similar agreements to take effect January 1 by two western lines broke the previously solid front against the union shop presented by western roads (L.G., Jan. p. 19).

G. E. Leighty, President of the Order of Railroad Telegraphers, who was chairman of the negotiating committee, announced that the contracts are "exactly the same" as those signed by eastern carriers.

Included among the larger railroads signing the agreements are the Chicago, Burlington & Quincy; Chicago, Milwaukee, St. Paul & Pacific; the Missouri Pacific; the St. Louis-San Francisco; the Texas & Pacific; and the Wabash.

*Both majority and minority reports are printed in full in this issue, beginning on page 248.

Base Usefulness on Skill, Not Age, Doctor Urges

The problem of the ageing population will never be solved until a man's usefulness is based on his ability and not his age, according to Dr. F. B. Bowman in an article on retirement in *Saturday Night*, December 6 issue.

Stating that the modern concept of retirement is out-of-date, Dr. Bowman writes that regulations regarding retirement formulated in 1900 when a man could expect to live only to the age of 50 have never been revised since.

Forced retirement at 65 years of age has deprived the United States every year of 1½ million workers who would have earned $4 billion, according to the United States Public Health Service. Neither the United States nor Canada, writes Dr. Bowman, can afford such a waste of manpower.

Studies have shown, states the writer, that absenteeism is lower between the ages of 60 and 75 than between the ages of 20 and 40. Likewise, the average mental acuity at 80 years of age has been shown to be equal to that at 35. There is a difference, but this is compensated for by a wealth of experience and greater steadiness and thoroughness.

Noting that employment discrimination begins at the age of 40, the author recognizes the unwillingness of industry to hire men of that age for the first time because of the type of pension systems that have developed.

Dr. Bowman suggests, among other things, that workers spend part of their leisure time in preparing for future productivity in declining years.

Aged Must Have Chance To Stay on Job: Congress

Opportunity for continued work by able-bodied aged persons who want to work was recommended recently by the United States Congress' Joint Committee on the Economic Report.

After a two-year study of old age and disability pensions in the United States, the Committee reported that the aged group most in need of assistance at present included widows and workers prematurely retired because of disability. At $47 per month for single persons over 65 years of age, $80 for married couples and only $40 for widows, the average pension benefit was still considerably below the subsistence level.

Of the 13 million persons in the United States who are 65 years of age or over, only about four million are working or wives of workers. By 1975, the report estimates there will be 20 million in this age group, with 14 million unemployed. Present aged payments, the report stated, will be too low for the costs of living of the future.

Other recommendations of the Committee were pensions adjusted to current standards of living, contributions by both workers and employers to the public program of pensions and acceptance of private pension plans as supplements to the public program.

Accidents Don't Increase With Age, U.K. Finds

Evidence that general liability to accident does not increase with age was given at the third meeting in Great Britain of the National Advisory Committee on the Employment of Older Men and Women. The Committee, meeting in October, reviewed the medical and psychological aspects of the employment of older persons.

A survey of domestic employment showed that up to age 70 most women continue to run their own homes without help and that it is between the ages of 70 and 74 that physical difficulties first become serious. This fact offered an example of the natural age of retirement in an occupation that had neither a tradition of retirement nor artificial barriers to continuing work.

The Committee, set up in February 1952, is composed of representatives of employers and workers, of research and medical services, of voluntary organizations and of government departments. Its objects are to consider in detail the problems of the employment of older men and women and to co-ordinate the activities of the many interests now working on it.

Bengough, Burt Named to Board Of ICFTU Regional Organization

Percy Bengough, President of the Trades and Labour Congress of Canada, and George Burt, a Vice-President of the Canadian Congress of Labour, were elected members of the executive board of the Inter-American Regional Organization of Workers (ORIT) at its second convention in Rio de Janeiro, Brazil, December 12 to 17, 1952. The organization is part of the International Confederation of Free Trade Unions.

Retirement Ages May be Extended—N.Y. Times

Retirement ages may be extended because of a tight labour market, the need to retain skilled workers and the influence of the cost of living on pensions, according to a recent article in the *New York Times* by J. E. McMahon.

The usual retirement age in most pension plans of 65 years for men and 60 for women has been eased in some cases to 67 and 68 for men and 65 for women.

The costs of pension plans, the physical condition of workers, the kind of business and the tendency to longer life expectancies for pensioners are seen by the correspondent as important considerations in the question of deferring retirements. The increasing desire of employees to continue working is also a factor in the problem of setting retirement ages.

Agitation for early retirement, based on poor business conditions and low employment, determined the working period in many older industrial pension plans, Mr. McMahon points out. At the present time, however, entirely different employment and working conditions prevail. The present high level of business activity and employment is providing reasons for more careful consideration of deferring retirements beyond the normal retirement age, he concludes.

"Housing Goal Should be 125,000 Units a Year"

"Construction of from 100,000 to 125,000 dwelling units a year should be considered a normal minimum national target by all parties concerned," said P. G. Wilmut, President of the Canadian Construction Association, at the Association's recent convention in Montreal. The way should be made easier for people to build homes, he added.

Greater credit opportunities would enable more people to invest in housing and would reduce the pressure for subsidized accommodation, he said.

About 75,000 new houses were built in Canada in 1952, he noted, more than had been expected. There were 85,000 built in 1951 and 91,000 in the peak year of 1950.

Hon. H. R. Winters, federal Minister of Resources and Development, said at the convention that he expects a greater number of new houses will be started in 1953 than in the previous year. The only limiting factor, he said, is the lack of municipal services such as water, sewers, police and fire protection and educational facilities.

A past president of the Association, Robert Drummond, noted that it was easier to obtain a $2,000 loan for the purchase of a new automobile than it was to obtain the same amount of loan for a home. Workers in low income brackets, he maintained, are being forced into subsidized multiple housing.

J. N. Flood, Vice-President of the organization, said that cheaper interest rates and a relaxation of the down payment amount on new houses must be brought about. The National Housing Act was not realistic, he said, and should be amended.

"Price levels of future construction," said Mr. Flood, "must be maintained at the present rates and this can only be effected by the introduction of new building techniques and an increase in productivity. We don't contemplate, however, that the maintenance of present price levels will involve any reduction in wage levels."

November Housing Starts Double Those a Year Ago

Starts on the construction of new dwelling units in November were more than double the number for November 1951, the Dominion Bureau of Statistics has announced. Housing starts have climbed sharply since last June.

Starts in the January-November period in 1952 were nearly 20 per cent higher than in the same 11 months of 1951.

For the fourth successive month, completions were moderately higher in November. Because of declines earlier in the year, however, the 11-month total of completions was 12 per cent lower than in the previous year.

13 Per Cent Higher

The number of new dwelling units in various stages of construction was 13 per cent higher at the end of November than at the same time 12 months earlier.

Starts in November totalled 7,664 units, compared with 3,798 in the corresponding month of 1951. The January-November total was 79,514, compared with a total for the same period in 1951 of 66,362.

Completions in November numbered 9,716 units, compared with 8,842 a year earlier. In the first 11 months of 1952, completions totalled 66,011, compared with 74,811 in the January-November period of 1951.

68543—2½

U.S. Housing Starts Exceed Million in 1952

A total of 1,131,300 new permanent non-farm dwelling units was started during 1952, of which 1,074,300 were privately owned, according to preliminary estimates of the United States Labour Department's Bureau of Labour Statistics. This marks the fourth consecutive year that housing starts nationally have exceeded the million mark.

The 1952 estimate represents an increase of 40,000 units, or 4 per cent, above the 1951 total, and was exceeded only by the 1,396,000-unit starts record established in 1950.

The 1952 housing volume was influenced partly by a gradual easing of restrictions on the use of building materials and the relaxation of mortgage-credit controls. Private housing alone accounted for the higher level of housebuilding in 1952—increasing by 54,200 units, or 5 per cent over 1951.

Hamilton Builds Largest Public Housing Project

Canada's largest federal-provincial public housing project, providing 496 dwelling units, is under way in Hamilton, Ont.

Rents are $58 per month for a one-storey, two-bedroom house; $62 to $65 for three bedrooms, depending on the type of house; and $67 for four bedrooms. Three-bedroom houses are the most common. Some are brick and some frame, with varied exteriors. The construction of the houses is let to private contractors.

Average Cost $9,500

A local housing authority, which is screening applicants according to housing need and income, will administer the project. The average cost of the houses is about $9,500, excluding purchase of land, which is another $400 per lot.

The project comes under Section 35 of the National Housing Act. The Regent Park development in Toronto is larger with 1,062 units planned; but this is a slum-clearance program aimed at replacing undesirable housing units with new ones and comes under Section 12 of the NHA. In this project the largest share of the capital is supplied by the city.

Recover Full Cost

Under the Hamilton project the full cost of construction will be recovered in rents and full city taxes will be paid. Capital is supplied by the federal, provincial and city governments, the only aid being the provision of government money at a low interest rate.

Income limits for families moving into the houses have been fixed at $2,964 minimum and $4,824 maximum or not less than four and more than six times the rent.

The largest rent subsidy housing project in the country is in Saint John, N.B., where some 200 units are under construction. Another is the Little Mountain project in Vancouver. In both of these, rents are based on family income and subsidies may go as high as half the amount that would be required for full recovery of cost.

Labour Income Reaches New High in October

Canadian labour income reached another record high in October. It totalled $952 million, compared with $944 million in the preceding month and $866 million in October 1951.

The cumulative total for the first 10 months of 1952 was $8,964,000,000; for the same period in 1951 it was $8,004,000,000.

All major industrial groups showed increases, both in October and in the first 10 months of the year.

Four-Fifths of Canadians Earn Less than $3,000

More than four-fifths of Canada's 4,085,151 wage earners reported earnings of less than $3,000 a year in the 1951 census, the Bureau of Statistics has reported.

Eighty per cent of males and 96 per cent of females were in that category for the census year ended before June 2, 1951. Forty-three per cent of males and 83 per cent of females earned less than $2,000 and 16 per cent of males and 39 per cent of females earned under $1,000.

Male Wage Earners

Some 653,400 out of 3,011,322 male wage earners earned between $2,000 and $2,499; 477,610 between $1,500 and $1,999; 448,145 between $2,500 and $2,999; 344,463 between $1,000 and $1,499; 248,356 between $500 and $999; and 225,081 under $500.

Among the 1,073,829 female wage earners, 257,189 earned between $1,000 and $1,499; 227,346 earned less than $500; 213,182 between $1,500 and 1,999; 194,784 between $500 and $999; 97,489 between $2,000 and $2,499; and 27,989 between $2,500 and $2,999.

UIC Annual Report Now Available

The 11th annual report of the Unemployment Insurance Commission, covering the fiscal year ended March 31, 1952, has now been published and is available for distribution. Cost per copy is 25 cents.

Under their respective sections, the report gives a detailed account of operations of the Employment Service and of the Unemployment Insurance Branch.

For copies of the report, apply to The Queen's Printer, Ottawa.

Extracts from Hansard of Interest to Labour

Proposed Amendment to Income Tax Act

January 12

Mr. Stanley Knowles (Winnipeg North Centre) moved:

That, in the opinion of this house, the Government should give consideration to the advisability of introducing legislation amending the Income Tax Act so as to remove the four per cent limitation from the section which makes provision for the deductibility of medical expenses for income tax purposes.

He said: Mr. Speaker, as everyone knows, there was in the former Income War Tax Act, and there is in the present Income Tax Act, a provision respecting the deductibility of medical expenses for income tax purposes. This has been in effect since 1943. However, that provision is limited by at least three main conditions. In the first place, those medical expenses which can be deducted are only those expenses defined as such in the Income Tax Act. That definition was quite narrow at first. It has been broadened a bit from time to time but it is still, in the view of many of us, altogether too narrow. At any rate, that is one of the limitations upon the right to deduct medical expenses from one's taxable income before computing income tax.

A second condition which is attached to this provision is what is known as a ceiling. In other words, right from the start there has been an upper limit as to the gross or aggregate amount that any taxpayer can claim as a deduction for income tax purposes. That amount has been changed on two or three occasions. Indeed, a year ago the ceiling was raised so that it now is $1,500 for a taxpayer who is on a single basis and $2,000 for a taxpayer who is on a married basis, plus $500 per dependent up to a limit of four dependents, or a limit of $2,000 for one's dependents. That is the second limitation on this provision, namely, the ceiling, the present terms of which I have just indicated.

I said a moment ago that some of us are not satisfied with the narrowness of the definition of medical expenses. We feel that it should be much wider, and I want to make it perfectly clear that, although I believe that the definition should be broadened to include other drugs than those now covered, to include spectacles, hearing aids and other such items, nevertheless that request is not contained in the motion now before the House, for the simple reason that it is wise to make one request of this kind at a time.

With respect to the second condition, namely, that of a ceiling on the amount that can be charged, I support the principle of there being a ceiling. Prior to the change that was made last year I felt that the ceiling was not high enough, particularly in view of the increases that had taken place in the cost of medical care, but so far as I can see the figures that are set out now as a ceiling are more or less satisfactory. Therefore I am not asking for any change in that part of this provision.

I come now to the third of the conditions or limitations which is attached to the provision for deducting medical expenses. The third provision is what is sometimes referred to as a floor or, in other words, a stipulation that there can be deducted from taxable income only that portion of medical expenses which is in excess of four per cent of net income. When this provision was first written into the Income War Tax Act by Mr. Ilsley in 1943 that figure was five per cent. In 1944 the figure was reduced to four per cent. The story of that reduction is very interesting for, as I have pointed out on previous occasions, the budget resolutions of 1944 did not forecast any such reduction of the five per cent figure. There was, however, considerable clamour on the floor of the House for the wiping out of that floor or reducing it, and in response to the debate that took place on that occasion, Mr. Ilsley came back later in the same session and reduced the floor to four per cent. However, there it has remained ever since 1944.

As hon. members know, the 4-per-cent floor relates to one's net income, not just to one's taxable income. Thus, if a person is on an annual salary of $4,000 a year and is a married man, although his statutory

exemption is $2,000—which means that he pays his income tax on only the other $2,000—nevertheless, when it comes to computing his income tax and to ascertaining whether his medical expenses are of any help to him, he can enter on the income tax form only that portion of his medical expenses in excess of four per cent of the total of his income—namely, four per cent of $4,000. In that case the first $160 does not count. It is only the portion of medical expenses above $160 in that example that can be allowed as a deduction for income tax purposes.

Now, Mr. Speaker, the whole point of this resolution which is before the House relates to one point and to one point only, namely that 4-per-cent floor. It asks that the 4-per-cent floor be wiped out and that consideration be given to the necessary legislation to make it possible for taxpayers to deduct their medical expenses right from the first dollar up to the limits that are set out in the Act. It is well known to all members of the House and well known to the people of Canada generally that that right—the right to deduct for income tax purposes right from the first dollar up to the limits specified—is accorded to donations to churches and charitable organizations. All we are asking for in this motion is that the same privilege, the same right that is accorded to contributions that are made voluntarily, be accorded to those medical expenses which are met by taxpayers involuntarily or in other words because of necessity.

I am satisfied that there is wide support for this principle, for this request that medical expenses be put on the same basis as charitable donations, and that the 4-per-cent floor be wiped out. In support of my contention that there is wide agreement with the request I am making, I remind the House that last year on March 26, 1952, this House passed unanimously a motion in my name which was similar to the one now before the House. I point out that the wording of last year's motion was slightly different from the wording of this year's motion and may I say immediately what the reason for the change is. The reason is that last year the then Parliamentary Assistant to the Minister of Finance, who is now the Minister of Fisheries (Mr. Sinclair), in my view misinterpreted my motion in that he thought it was asking for something more than just the removal of the 4-per-cent floor. He thought that I was asking for a complete removal of the ceiling as well. I have reworded the motion this year to make it clear that it is not asking for the removal of the ceiling. I would like to see the definition of medical expenses broadened but this motion just asks for one change, namely the removal of the 4-per-cent floor.

Last year, once it was made clear on the floor of the House that was all that was intended in the terms of my motion, the then Parliamentary Assistant to the Minister of Finance said in the name of the Minister of Finance (Mr. Abbott) that the motion was acceptable. As a result of that indication of acceptance by the Parliamentary Assistant to the Minister of Finance, the motion received support in all sections of the House. Members on the opposition side were all in favour of it and a number of members on the government side, who on previous occasions were not so vocal, indicated their support last year by speaking to my motion . . . As a result of that support in every part of the House, the debate was a rather short one and it ended by the motion being carried unanimously by this House of Commons . . .

I think it was quite proper for the press of this country, Liberal press as well as opposition press, to assume as it did from the passing of that motion on March 26, 1952, that one of the changes which could be anticipated in the budget that was brought down on April 8 would be the elimination of that 4-per-cent floor. As everyone knows, when we got that budget on April 8 there was no change whatsoever in the floor. The Minister, on the other hand, did make a change in one other aspect of the legislation, a change which did not concern many of us too much—a change in the ceiling; but he insisted that the floor had to stand. . .

Well, I do not know what is going to happen to my motion today but I certainly hope . . . action will be taken on it in this year's budget and that the 4-per-cent floor will be wiped out so that taxpayers will be allowed to deduct their medical expenses right from the first dollar in the same way as applies in the case of donations to charity. . .

Hon. Douglas Abbott (Minister of Finance): Mr. Speaker, as my hon. friend from Winnipeg North Centre (Mr. Knowles) has pointed out, this motion is in substantially the same terms as the motion he presented to the House last year and which, as he has indicated, was passed by the House, and without any objection on my part.

I was not able to be present at the debate, but my then parliamentary assistant did discuss the matter and did indicate that the government had no objection to the passing of the motion.

Mr. Macdonnell (Greenwood): Would you have made objection if you had been present?

Mr. Abbott: No, I would not, because I gave my parliamentary assistant instructions that I did not oppose the motion, and my reason for not opposing it was based upon the terms of the motion itself.

The motion offered at that time was in most respects exactly the same as that now before the House, namely—

That, in the opinion of this house, the Government should give consideration to the advisability of introducing legislation amending the Income Tax Act so as to remove the four per cent limitation from the section which makes provision for the deductibility of medical expenses for income tax purposes.

Now, in the light of subsequent events, I think I was wrong in taking the course I did take, in indicating to my parliamentary assistant that there should be no objection to the passing of the motion. I did it because I felt that it would be wrong and illogical for a minister of finance, at the time budget matters were under consideration, to refuse to give consideration to any proposal.

Every day I am receiving proposals from taxpayers as to how tax laws should be amended; and on that occasion I felt that, in the terms of the resolution as framed, it should be allowed to pass. I must confess that, in my innocence, I did not realize that it would be represented to the country as being the unanimous opinion of the House of Commons that this should be done.

We know how these resolutions are passed. I was not in the House that day, and I do not know what the attendance was, but I assume it was perhaps average—or, perhaps even less than average, because it was a private members' day. In any case it was passed without objection from the Government. But because in its terms it is, I think, clearly a resolution which relates to the imposition of a tax, then as we know, under our constitution proposals of that kind can be introduced only by a member of the Government on recommendation of His Excellency.

Now, my hon. friend has said that this was not put before Parliament as a direction to the Minister. Well, I certainly think he is right in that; but he and his supporters have done their best to persuade the people of Canada that it was a direction.

It is all right to pass resolutions couched in these terms, relating to budget matters, if it is understood that they do indicate what they say, in the terms indicated, namely that the Government should give consideration to certain matters. But the ultimate responsibility as to the fairness and the desirability of making these budget changes must rest with the Government. . .

I should like to take a few moments to indicate the philosophy behind the provision for a floor. In common with a good many other people in this country, and in the House, I have spent money during the last 25 years in raising a family. Unfortunately they are getting pretty close to a grown-up stage; but in the course of those years I have had to spend varying amounts in each year for dental care, for check-ups, for childhood diseases and so on. . . We have in each year paid out money in varying amounts. Perhaps sometimes it would be a few hundred dollars, and sometimes somewhat less than that—for these periodical check-ups, general child care and the like.

I see no reason in the world why I, or anybody else, should be in a position to deduct those normal expenses—and I prefer to use the word "normal" rather than "average". I see no reason why I should be permitted to deduct those normal expenses from my income before calculating my income tax, any more than I should be entitled to deduct expenditures for clothing necessary to keep the children warm, or food necessary to keep them alive.

I think it is unsound, in principle, that normal living expenses of the individual should be paid out of income after tax.

That is the basis upon which the floor has been established. It may be, as I say, that the floor is too high. Perhaps it should be less than four per cent. It started out at five per cent, and it has been lowered to four per cent. I am quite prepared to look at that question again. I am quite prepared to look at the question of whether there should be a floor at all.

However, I have endeavoured to indicate why I believe it is essentially fair that there should be some floor. Because one of the jobs that any minister of finance has to do is to try to spread the tax burden, which amounts now to something like four billions. He must try to spread the tax burden as fairly and equitably as possible among all taxpayers. If one taxpayer gets a concession or a deduction, then some other taxpayer must provide those moneys.

My hon. friend does not quarrel with the ceiling; he has never quarrelled with that. There may be a question as to whether the ceiling should be raised. I have a perfectly open mind as to that, and it is a matter of opinion. But quite obviously, both in my view and in his, there should be a ceiling.

Otherwise the benefits of a deduction of this kind would be quite disproportionate as between those in the lower and others in the higher income tax brackets.

The question as to the definition and the eligibility of various expenses which would qualify for deductions is constantly under review. From time to time we have made additions in respect of the classifications of drugs and other expenses which can be claimed as deductions.

Those, then, are the principles upon which these deductions can be claimed. As I say, I have always felt that to be fair as between the different taxpayers in the country there should be some minimum below which a claim cannot be made for deduction of these expenses.

Then there is an added reason—and perhaps this is not an entirely compelling one: I refer to that of administration. I am informed that it would be extremely difficult — virtually impossible — to check claims for medical deductions if every claim, no matter how small, were eligible as a tax deduction. The case may not be completely analogous but I think there is considerable parallel between the type of insurance which some of us take out having a $20 or $40 deductible provision. We decide that we will insure ourselves for minor losses in connection with our car or other insurable property and thereby get a much cheaper rate for the greater expenses.

The philosophy behind this actually is that it is quite within the capacity of the ordinary individual to pay the normal expenses incurred for medical care or attention, but when those exceed what can be considered as a normal amount then, and then only, should there be special relief. That is the principle which lies behind the law as it stands now.

I am not going to take a great deal more time discussing the principles underlying this law. The cost of granting blanket exemption of four per cent, as suggested by the hon. gentleman, would be quite heavy. I am told that if everyone claimed the 4-per-cent deduction, that is to say, four per cent on income as indicated under the Act, the cost would be something over $100 million. The estimate of some $40 million which was given last year would mean that a lot of people would not claim at all for medical expenses or would be substantially below the four per cent. In any case the cost undoubtedly would be substantial. It certainly can be argued that more equitable and widespread tax relief can be afforded in other ways.

At this time of the year budget matters are under consideration. I doubt if many new points could be brought up in connection with this matter.

. . . I intend to again give this question of deductions for medical expenses the most serious consideration, as I did last year. . . In that consideration I shall again carry out the wish expressed by the House in the resolution last year and which is again voiced in the resolution we are now discussing, that the Government should give consideration to the advisability of removing—I am shortening it up—this floor.

Unfortunately I am unable to be here this evening. With the assurance which I have just given, that the matter will be considered again this year, I think perhaps it might be appropriate if I were to move the adjournment of the debate.

Fair Employment Practices

January 13

Hon. Milton F. Gregg (Minister of Labour) moved for leave to introduce Bill No. 100 to prevent discrimination in regard to employment and membership in trade unions by reason of race, national origin, colour or religion.

Motion agreed to and bill read the first time.

Voluntary Revocable Check-off

January 13

Mr. Stanley Knowles (Winnipeg North Centre) moved the second reading of Bill No. 2, to amend the Industrial Relations and Disputes Investigation Act (voluntary revocable check-off).

As I have indicated on previous occasions when this bill has been before the House, it is a measure which asks for a legislative enactment to provide the very minimum of what is known as union security. There are a number of ways in which union security can be provided, and I want to say that for my part I would like to see something even more effective and more useful than what is asked for in this bill. But at least this is a minimum form of union security, and it is already in effect in the labour codes of a number of provinces in this country. I have reminded the House on previous occasions of the fact that all parties in this House have, on various occasions, expressed their support of the principle of union security . . .

Now, Mr. Speaker, the provision in the bill is quite simple. It specifies that where a union is certified under the provisions of the Industrial Relations and Disputes Investigation Act, that union may request

the check-off. If it does it means that the company is required to deduct from the pay of employees their trade union dues, and pay them over to the union, but only in the cases of those individual employees who indicate in writing that it is their desire that it be done. In addition to that provision, it is stipulated that after any person has directed that his dues be checked off in that way he can, at a later date, revoke that decision if he wishes to do so. In other words, that is the reason for the way in which this provision is defined, namely as the voluntary revocable check-off.

As I have already said, this is only a minimum way in which to guarantee union security, but at least it is a beginning. I have pointed out on previous occasions that this matter has been requested year by year by the major labour congresses in their representations to the Government. I have no doubt but that it will be included in the representations they will make to the Government again this year. I point out also that this is a provision in many of the provincial labour codes.

The only active opposition to this provision, so far as the federal law is concerned, of which we have been aware in recent years has been the occasional mimeographed circular distributed to the members of this house by the Railway Association of Canada. This Association is, of course, an association of the employers, and that association from time to time has objected to this bill. The objection has been largely on the ground that it would involve considerable bookkeeping. It has been pointed out in this House, not only by myself but by the Member for Spadina (Mr. Croll) and others who have supported this measure, that that is really a rather specious argument, particularly in view of the fact that employers make a great many other deductions at the request of their employees.

Well, to me it is significant that no such protest against this bill has been received as yet this year from the Railway Association of Canada. I dare to think that the reason no such protest has come is because of the ruling of the board that dealt recently with the railway dispute between the railway companies and their non-operating employees. Hon. members will recall that that board was headed by Mr. Justice R. L. Kellock, and the other two members were Mr. Paul S. Smith, appointed by the employers, and Mr. David Lewis, appointed by the employees. Majority and minority reports were presented.* In other words, there were many points on which there was disagreement between Mr. Justice Kellock and Mr. Smith, on the one hand, and Mr. Lewis on the other. However, at least this question of the check-off was one upon which they were agreed. Mr. Lewis, in his minority report, pointed out that he would like to see an even greater measure of union security for railway employees than just the check-off, but at least he was glad to join with Mr. Justice Kellock and Mr. Smith in recommending that the check-off, so far as railway employees are concerned, be instituted. . .

I understand that on the basis of that report the check-off will shortly be in effect so far as railway employees are concerned. There is some question as to whether it will be on the basis of the Rand formula. At least what we are asking for in this bill is being accepted now by the railway companies of Canada, and in this case by their non-operating employees.

I submit, Mr. Speaker, that since this group of employees constitutes perhaps the largest number of employees who come under federal labour jurisdiction, there is now no reason at all why there should be any reluctance or any resistance on the part of the Government to writing this measure into the federal labour code. The wording of the section that would be added by the terms of my bill is, in fact, the wording that was drawn in the Department of Labour. The story behind that, briefly, is that in 1948 when the industrial relations committee was dealing with the federal code it was moved by the hon. member for Spadina, as a member of that committee, that the check-off provision be written into the labour code at that time. His motion carried, although it was on a very close division. After his motion carried, although it did not have the support of Mr. Mitchell, then Minister of Labour, the Minister had one of his officials come back the next day and suggest that if this provision were to be written into the code perhaps it would be well to have it written in language that the legal advisers of the Department of Labour thought most appropriate.

The hon. member for Spadina accepted the language drafted by the legal officers of the Department of Labour, and it is that language which forms the main part of the bill now before us. . .

Mr. A. F. Macdonald (Edmonton East): . . . In 1951 I said that I believed in the check-off that was negotiated, not one that was legislated. No one knows better than do trade unionists and management that

*See L.G., Jan., p. 55.

there must be good will in every document that is executed and signed by both parties. At that time, of one union for which I had a great deal of respect, I said that when they again opened their contract for negotiations with management, they would be able to negotiate the kind of check-off that would be acceptable to the people embraced by that agreement, both at the management level and at the employee level. I do not like to take this occasion in the House of Commons to say that at that time I was right, as has been proven by the fact that just recently 17 major railway organizations were able to meet management around the bargaining table like gentlemen, to discuss their problems, to find ways and means of settling their differences, to include a check-off which goes far beyond the kind of innocuous check-off that is suggested in the bill before us, then to sign an agreement for a stipulated period of time and to work under that agreement with good will.

Now that it has been proven to the Hon. Member for Winnipeg North Centre (Mr. Knowles) that matters of this kind can be negotiated, I am surprised that he should still pursue this question and persists in endeavouring to persuade the members in this chamber to support an innocuous kind of check-off that is not nearly as good as that which trade unionists and management have been able to agree on in recent months. In other words, if this provision is written into the Industrial Relations and Disputes Investigation Act, it would not only be a floor but a ceiling, and it certainly is not as good as what the unionists themselves and management have been able to agree on. . .

Mr. Paul E. Coté (Parliamentary Assistant to the Minister of Labour): Mr. Speaker, on several occasions I have voiced my views on the principle of this bill. In fact this is the fourth time that a bill to amend the Industrial Relations and Disputes Investigation Act has been presented for this purpose. I should like to make a few remarks tonight which I did not have the opportunity to develop at any length in the past.

At the outset I wish to assure my hon. friend that I have nothing against the check-off of union dues, in itself, or against any stronger measures of union security. On the contrary, I fully approve the principle of those measures. If there is anything within my control that I can do to increase the number of contracts in industry containing provisions for union security or the check-off of union dues I shall never hesitate to do it.

May I say to the Hon. Member for Winnipeg North Centre (Mr. Knowles) that I think the criterion which should guide this chamber in deciding whether this bill is desirable should be this. Is the underlying principle of this bill consistent with the basic principles of the Act it intends to amend? From the arguments which have been advanced in support of the passing of this bill I am inclined to believe that this important aspect of the question has not been examined as it ought to have been and that no convincing case has been made to justify the change which it advocates in the statute at this time.

The Industrial Relations and Disputes Investigation Act embodies basic principles which should not be altered without reasonable cause or without applying the same measure of caution which was applied in the drafting and passing of that Act. Those principles are freedom of association, certification of bargaining units, free collective bargaining on all matters subject to agreement between employers and employees, and compulsory compliance by both parties with the machinery set up for the settlement of all disputes.

Union security provisions, including any measure of check-off of union dues, have hitherto been considered as matters for collective bargaining. It is true as some hon. members have said, more particularly in this debate the sponsor of the bill, that in six provinces the labour relations acts include provisions for the voluntary revocable check-off. But in discussing the bill no one has given any indication as to what procedure was followed, whether management was consulted and had agreed or what was the situation as far as the check-off was concerned, in the provinces where such provisions were included in the labour acts.

Four important provinces, Manitoba, New Brunswick, Ontario and Quebec—the last two being the most highly industrialized provinces—have not yet deemed it to be in the best interests of good labour-management relations to enact such a provision. In the attitude which these provinces have taken, to stand by the principle of free collective bargaining, they are in complete accord with the federal Act. They still believe that the time has not yet come to introduce any compulsory feature in the field of collective bargaining, that if they did this without previous consultation and a certain measure of agreement with and by both parties in industry they would be setting a precedent of unilateral if not arbitrary statutory action

which might become dangerous in the future, in that it could be invoked by some other government for legislative action which might not be in the best interests of trade unions and of labour-management relations in this country. Once a legislative body has determined by statute and made compulsory a provision which is normally dealt with by collective bargaining it opens the door for more and more intrusions of the same kind by the state in a field which ought to belong exclusively to labour-management negotiations. . .

The principle of free collective bargaining is the cornerstone of the federal labour relations act. That should not be altered, any more than any other major provision in the Act, without consultation with and at least a certain measure of agreement by both parties who will be affected by the change. That was the purpose of the then Minister of Labour, the late Hon. Humphrey Mitchell, when he submitted the initial draft of his legislation to the national bodies of management and labour.

On the one hand there was the Trades and Labour Congress of Canada, the Canadian Congress of Labour, the dominion legislative council of railway transportation brotherhoods and the Canadian and Catholic Confederation of Labour, representing labour. On the other hand there was the Canadian Manufacturers Association, the Canadian Chamber of Commerce, the Railway Association of Canada and the Canadian Construction Association, on the management side. The measure of agreement on the major provisions of the Act which was then obtained from both sides was indeed gratifying. This consensus of opinion gave the assurance that the legislation was initiated on solid ground and should not be altered in its major provisions without determining and following the best possible procedure which would tend to safeguard the prerogatives of all concerned.

The initial draft of the labour act was submitted to and approved in its broad principles by the provincial ministers of labour. There was no necessity to do this, but the late Humphrey Mitchell showed wisdom in availing himself of the opportunity provided by a conference which was taking place with his colleagues in the provinces on other matters to seek their views and secure their agreement on the main features of the bill which was then being considered. This consultation has paved the way for the inclusion of Section 62, which tends to promote as much uniformity of legislation as possible between the two levels of government and to make possible the administration of any provincial act by the federal Department of Labour if any province so desires.

These consultations with the provinces, management and labour organizations brought out valuable suggestions which contributed to the improvement of the initial draft of the bill. A second draft was prepared which was introduced here during the session of 1947, and was referred to the standing committee on industrial relations. It received serious consideration. The organizations which I have already mentioned were invited to appear before the committee. They did so and submitted their considered views on the proposed legislation. The bill was redrafted and reintroduced in 1948, thoroughly examined by the committee, and finally adopted and brought into effect on September 1, 1948.

The administration of this statute has given good results so far. It would be unfair and unwise, I submit, to amend an important feature of such legislation without seeking that measure of previous consultation and concurrence with all parties concerned, and not only a few of them. The Department of Labour is not and must not become identified with the interests of one of the parties in industry to the exclusion and seemingly against the will of the other. The Minister and his officials have always striven to uphold and safeguard their position as mediator between the two parties, and in their legitimate effort to hold that balance they must be inspired and assisted by legislation and regulations which have been enacted in the same spirit of impartiality as between management and labour.

If Parliament were to enact the bill sponsored by the Hon. Member for Winnipeg North Centre (Mr. Knowles), what stand could it take if and when management organizations would attempt to obtain, by legislative action, provisions which might react against organized labour as has occurred in other countries? I should like, if I may, to cite here a few words of the late Humphrey Mitchell, which may be found in *Hansard* for 1947 at page 4231. He said:

> —may I say that we have received representations for the inclusion of measures severely curtailing union activities; from others have come suggestions which would involve, under certain conditions, the compulsory application of the principle of union security in collective agreements and the adoption of other innovations.
>
> We have not given effect in this legislation to such representations, since it is not the desire of the government to place impediments in the way of free collective

bargaining between employers and their organized workers, or to legislate conditions or terms of employment that properly lie in the field of collective bargaining.

In the same speech on June 17, 1947, the late Mr. Mitchell had this to say:

Human nature cannot be corrected by a law, and in the final analysis the major consideration in improving human relations between employers and employees is the simple matter of trying to see each other's point of view and developing mutual understanding.

. . . I refer to the debate which took place on the bill to put an end to the railway dispute which had resulted in a nation-wide strike in 1950. On August 30 the leader of the CCF (Mr. Coldwell) said that the House must try to "ensure that free collective bargaining and social justice will remain fundamental parts of our Canadian way of life". The Hon. Member for Vancouver East (Mr. MacInnis) had this to say as found at page 39 of *Hansard* of the same date:

Nevertheless the workers are fearful—and I believe they have every reason to be—that if this bill passes employers will take it as a precedent and that whenever workers make demands there will be no further bargaining in good faith because employers will expect the government to make the same provision for them.

My good friend and practically my deskmate in the house, the Hon. Member for Spadina (Mr. Croll), had this to say as found at page 39 of *Hansard* of that year:

Yet this bill could be construed as saying to the trade unions that in such and such circumstances you are no longer free to exercise your rights.

Further on he said:

Neither today's government nor today's opposition in this house can undertake to say what the effect of passing this bill will be, though we say it is confined to a particular strike in 1950. There it is for all of us to see in the future. We ask ourselves the question, will it not be extended in the future by administrations less friendly to labour than our own.

As a matter of fact the Hon. Member for Spadina made a very thought-provoking speech on that occasion, and I should like to quote more of what he said. Further on he had this to say:

I believe it would be nothing short of a national calamity if we were to substitute something else for the collective bargaining process . . . Compulsion can force the parties to submit to a given procedure. It may even force them to accept unwillingly certain results. But I think this house knows very well that forced obedience generates resistance and hostility. Far from being a cure, it is a source of further conflict and it multiplies strife instead of preventing it. Compulsion never removes the cause of the strife.

Mr. Deputy Speaker: As it is six o'clock, the hour for private and public bills has expired.

Pensions for Disabled Persons

January 14

Mr. Daniel McIvor (Fort William) moved:

That, in the opinion of this house, the government should consider the advisability of co-operating with the provincial governments for the purpose of providing pensions, equal to old age pensions, for all those who are incapacitated and unable to earn their living, regardless of age.

He said: . . . I have received a great many letters which I am not going to read, because hon. members know the need just as well as I do. I have received long articles and a great deal of information from the Trades and Labour Council of Fort William, as well as from others. I congratulate the Government of Ontario upon going along the line of social security which we on this side of the House are following. We commend them heartily for passing legislation granting pensions to those who are incapacitated. Not only that, but I know there are cases where the help has really come from the province of Ontario and therefore, from one province at least, we shall receive wholehearted support on this question.

I might divide these cases into three classes. The first class of those who are incapacitated might be those who are not able to work and earn a livelihood like the ordinary individual, but who can get around by means of a wheelchair. The second class would be those who cannot get around in a wheelchair or by any other means but who, when placed at a desk or a table, can use their hands, their speech or their head to earn something. They cannot earn a great deal because there is a limit to the amount of goods which they produce that friends and other individuals can purchase. The third class, Mr. Speaker, with which I am most concerned, are those who can neither get around nor earn a dollar. To me those individuals need to be fed and clothed; they need to have medical attention and nurses. They are just like newborn babies, the most helpless things in the world. I say, therefore, that the Government of Canada should certainly take care of these people. . .

You have all seen the wheelchair brigade. We would not like to be there, and because we are not there we should be willing to help them. These people are more needy than old age pensioners; they are more needy than many of the blind, and more in need of help than those who get relief through unemployment insurance. I have wholeheartedly suported all these things in the House, but I will not support any other social security measure until there is provision made for these people. I include health insurance in that, for which I worked so hard for two years on the committee. This measure is needed more than health insurance for Canada. Some people think that these are the forgotten people, but they are not. The Minister of Labour (Mr. Gregg) last year informed me that there was a committee of the Department of Labour, National Health and National Defence, who are working with representatives in the different provinces to find a way of taking care of these people as well as the incapacitated veterans.

I realize that if the measure is adopted it will mean more taxes. I expect even the members of the opposition, who think we are so highly taxed, to support this resolution because I believe they are human and they recognize the need of these people. I would just interject here that Canadians pay lower taxes than the people of the United States, Great Britain, New Zealand or Australia. When I visit some of these people I realize that one cannot help them merely by giving them something of one's own. It is a job for the Dominion of Canada. . .

Mr. W. G. Blair (Lanark): . . . The resolution, as introduced by the hon. member today, is extremely broad, but the intention of it is to provide people who are disabled and unable to earn their own living with a pension. The phrase used in the resolution is:

> —who are incapacitated and unable to earn their living, regardless of age.

This phrase is open to some criticism, but I am going to regard the resolution as favouring the principle of providing pensions to people who are unable to earn their own livelihood or who cannot be rehabilitated. These people are classed as totally and permanently disabled. Under these conditions, I am going to favour the resolution, and I think that the introduction of legislation along these lines will be a real advance and extension of our social security. It would fill a very serious gap. . .

Mr. William Bryce (Selkirk): Mr. Speaker, I want to support this resolution . . .

. . . Then the question always comes up: Can we afford it? This Government and previous Governments have always found the money for anything worth while. I do not think there will be any trouble about that. If you explain to the people what a tax is for, if it is something legitimate and really needed you will have their support. So we would have no trouble getting taxes to pay for it.

The resolution deals to some extent with the federal and provincial Governments. I hope that there will be no passing of the buck as there has been in other cases. When the act or the amendment to the act is brought in I hope that there will be no room for any misunderstanding and that these people will get this as of right. . .

Mr. F. D. Shaw (Red Deer): Mr. Speaker, my colleagues and I consider this resolution to be one of extreme importance . . .

. . . The National Advisory Committee on the Rehabilitation of the Disabled estimates that there are approximately 150,000 people in Canada of working age who are victims of accident and disabling illnesses, including mental illnesses and so forth, and who are in dire need of support. I am not unmindful of the fact that some action has been taken toward providing rehabilitation services. . .

I noted when examining a recent issue of the Labour Gazette that reference was made to this problem of rehabilitation. On page 1566 of the December, 1952, issue of the Labour Gazette, under the heading "National Plan for Rehabilitation of Civilian Handicapped being Drafted", it is stated that the National Advisory Committee would hold another meeting in September of 1952. . .

I also notice that Mr. Ian Campbell, National Co-ordinator of Rehabilitation, said, speaking of his trips to various provinces of Canada:

> Wherever I went people, working with the handicapped, appeared to be encouraged by the fact that we now have a national headquarters for rehabilitation, and that the Government of Canada has taken action in this field.

I stated earlier that I wanted to emphasize the fact that I fully realized that work, effective work I believe, has been going on for two years in the field of rehabilitation.

Before I leave this point may I add that Mr. Campbell, in speaking of the objectives, asserted:

—money is not spent on the rehabilitation of the handicapped. It is invested in their future.

I think that is absolutely correct. He says:

Who can doubt the wisdom of a program that makes the dependent independent, makes the non-producer a producer and makes consumers of wealth creators of wealth?

I stated that was my last reference but I find that I desire to make one more. I wish to refer to three resolutions adopted by the Committee last September. Here is the first one:

A broadening of the Canadian vocational training scheme so that handicapped persons may obtain academic and prevocational training needed for specific employment.

I am going to inquire of the Minister exactly what action has been taken up to the present time with respect to these resolutions. The first one to which I have made reference has to do with a broadening of the Canadian vocational training scheme so that handicapped persons may obtain the academic and prevocational training needed for specific employment. I should like to know what has been done. After all, these recommendations were made last September. Here is the second one:

Organization of the rehabilitation program at the provincial level but with federal grants for such aspects as medical care, training and placement.

We are vitally concerned about this matter and I think the Minister should indicate to us whether anything has been done with respect to that resolution. In the third place they made the following recommendation:

A "pilot" survey on the physically handicapped now registered for work with the national employment service in Montreal.

Possibly the Minister could indicate in the course of his observations whether that survey has been made or is under way. If it has been completed, then I believe the results should be made known to us. I certainly desire to commend the National Advisory Committee for the work which I know they have done in this field. . .

That deals with one aspect of the problem only, the rehabilitation of those who are capable of rehabilitation, but it does not solve the whole problem by any stretch of the imagination. . .

I realize fully the importance of that field but . . . there is one very serious problem that must be taken care of right now, the problem of those who are wholly incapacitated. I know that representatives of the association of incurables have met the Minister . . . I have before me their resolution, which I shall not read, but it indicates clearly and definitely that they feel that pensions are a most necessary part of whatever general program is adopted to take care of the problem of the incurable. . .

Mr. George H. Hees (Broadview): Mr. Speaker, I agree completely with the principle expressed in this resolution, which is to pay a $40 a month pension to all people who, through disability, are no longer able to earn their own living. After all, it is exactly the same principle as that embodied in the old age pension act, which assumes that when a person reaches the age of 70 he is no longer able to earn his own living and is, therefore, entitled to a pension.

Now, if a person has a disability which cannot be cured, and if that incurable disability is such that the person cannot be taught a trade which will enable him to continue to earn his own living and provide for his family, then I firmly believe that person should be assisted by the government in the form of a pension.

However, I believe that the very first thing to do is to try to cure that disability, and, failing that, to try to teach that person a trade. This will require a well planned and well carried out rehabilitation program, both physical and occupational . . .

I believe it is the responsibility of the federal Government to work out with the provinces such a rehabilitation program, and I very much hope that the rehabilitation committee, which has been in operation now for a year, is steadily working toward that end . . .

Mr. J. S. Sinnott (Springfield): Mr. Speaker, . . . I would like to have the resolution which I have on the order paper coupled with this resolution, Mr. Speaker, so that it will save the time of the House. My resolution reads:

That, in the opinion of this house, the Government should take into early consideration the advisability of including in their social security program the payment of pensions or maintenance allowances, equal and similar to blind pensions for the unfortunate crippled people of Canada.

If these two resolutions are coupled I am sure they will be considered by the Government. Whatever decision the Government makes will be influenced by the way in which the parties of this House agree to such legislation.

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, . . . in taking part in this debate, I propose first

of all to indicate what is being done in the important field of rehabilitation, apart altogether from whatever cash benefits are received by various segments of the population of Canada.

It will be seen from this kind of review that a great deal is already being done by all levels of jurisdiction in this country regarding the important question raised in the resolution proposed by the Hon. Member for Fort William (Mr. McIvor). I think it would be advisable for us to recall the actual terms of the resolution, which reads:

> That, in the opinion of this house, the Government should consider the advisability of co-operating with the provincial governments for the purpose of providing pensions, equal to old age pensions, for all those who are incapacitated and unable to earn their living, regardless of age.

. . . All of the social services in Canada cannot and should not be designated for the sole competence of one government authority. It would be wrong for the federal Government to assume full control and full interest in all phases of social welfare and of health activities. That is not only good government in a confederation such as ours, but it is also the view of the ten provincial governments of our country. . .

It must not be thought, however, that in saying that I am now preparing a complete defence against doing anything in the field of rehabilitation and providing cash benefits for our invalid population, or for those who are incapacitated and on that account unable to provide full maintenance for themselves and their families. For the fact is that while in Canada there is no single disability cash benefit scheme, there are nevertheless under various programs—mostly federal but also under provincial auspices—at the present time some 325,000 disabled Canadians who are receiving assistance at a cost of $110 million a year, almost 80 per cent of which is borne by the central authority. That is a considerable proportion of the population. It is a fact that has not been emphasized here today. Those who have argued for this proposition, and argued well, have failed, it seems to me, to emphasize the important contribution already being made not only by the provinces but by the federal Government in this important matter. . .

Now with regard to rehabilitation. As I said a moment ago, almost $11 million is made available to the provinces under crippled children, mental health and tuberculosis control grants. Very substantial proportions of this money are used for rehabilitation purposes. Then again, $100,000 a year is provided by the Department of National Health and Welfare to national voluntary agencies engaged in rehabilitation work. The Department offers valuable consultative services to the provinces and to private agencies in such fields as blindness control and mental health. Federal-provincial aid is being given to special federal-provincial projects to provide surgical operations to restore the sight of selected blind pensioners.

Likewise the federal Government, through the Department of Veterans Affairs, provides welfare services and treatment for disabled veterans. That service includes rehabilitation activities as well as cash benefits for many thousands of veterans who come within the ambit of the resolution now under discussion.

Now with regard to the large segments of the population which are covered by provisions fully as generous as those envisaged in the resolution now before us, I would point out that all persons between the ages of 65 and 69 years with insufficient means to provide for their own needs are taken care of through federal-provincial old age assistance programs. Those 70 years of age and over are cared for under federal old age security legislation regardless of means. It is correct therefore to state that the objectives of this resolution are being already realized in so far as those of our population over 65 years of age are concerned.

Then with regard to blind persons, all adult blind persons regardless of age who are unable to earn their own living are taken care of under the new federal-provincial blind persons' allowance program. It is worth noting that the blind are the largest single group of civilian disabled, and represent perhaps one-third of the total number of those who are incapacitated.

With regard to our veterans, I think it is desirable to remember that all our veterans who served in both world wars are covered by provisions even more generous than those contemplated in the present resolution. Over 200,000 disabled veterans are now receiving assistance, either in the form of pensions or war veterans allowances.

At the provincial level there are a number of important provisions for the disabled. Everyone in this House knows that the provincial Governments have developed comprehensive provisions for partial and total disability benefits under their workmen's compensation programs. In most provinces where a husband is prevented from working by physical or mental disability aid is provided under a system of mothers' allowances. As an

example of what is being done for tuberculosis victims, most provinces provide special allowances for persons incapacitated by that disease. At least one province, Alberta, has a provision for widows' pensions which covers a small segment of the disabled group below 65 years of age. Newfoundland has its Dependents Allowances Act which takes care of the disabled among others.

It is therefore clear that a large proportion of our disabled population, all those over 65 years of age, our war veterans, all our blind, those who have been injured by industrial accidents and other similar groups are covered already under one or other of the programs I have described.

Last year the province of Ontario went a step further in introducing a new plan for the disabled. The initiative which that province took seems to suggest that possibly disability pensions, like workmen's compensation and mothers' allowances, can best be taken care of by the provincial governments to the extent that they cannot be subject to insurance principles. I know that is the view of the Government of Ontario from the discussions I have had with them. . .

It certainly is the view of at least three other governments that this is a field which they can best attend to, though they do not all agree that there should be no financial participation by the federal Government. When we embarked upon the old age security program we had in our minds the fact that we were assuming a greater responsibility, not only for those 70 years of age and over but for the group which would be covered under the new Act, those between the ages of 65 and 70 years. We were relieving the provinces of a great financial responsibility. Their financial load has been very considerably reduced as a result of our old age security program.

To come back to the scheme in Ontario, I have not seen official figures as to the extent of that program. I understand that the number of recipients is not large and that consequently such a program is well within the capacity of the province. I hope to be able to announce the results of our health-sickness survey within a very few months, and that will reveal, I think, that this problem is not as great in the proportion of disabled people as might be thought, particularly when one takes into account the 350,000 individuals in the country who are now receiving cash benefits in one form or another through the federal Government. It may be that the survey will reveal that, just as this group is within the capacity of the province of Ontario financially, so too will it be well within the financial capacity of municipal and provincial governments throughout the country. . .

In any event it seems to me that these programs can best be handled provincially . . . with this in mind it might be well to note that the federal Government's assumption of the total cost of old age security payments for those 70 and over has reduced provincial expenditures on old age pensions by more than $18 million a year, and our estimate would be that the kind of scheme envisaged by the proposition now before the House would certainly not cost the provinces anything like that in total. Because, it seems to me, we are now doing our share in respect of this problem and because we have other great obligations, I could not get up in the House at this time and accept this resolution without qualification, much as my own human instincts and sympathies, like those of every other hon. member, might lead me to do so. I could not do that in the light of the situation which I am describing to the House, and also because of other things that the Government yet hopes to be able to do in these wide humanitarian fields for the people of this country. . .

It seems to us that we can develop these schemes in partnership with the various provincial governments, and this is one phase of activity which I believe most of them are prepared to undertake and which I believe they can do better than we. The administrative difficulty is very great, as we have found in administering those problems of rehabilitation that come directly within our own sphere of activity. . .

Later in the session I hope to be able to announce a program in connection with a phase of activity in our department that will not be unrelated to this matter, although it will not be directly in answer to what is requested in the resolution. I must make it clear that it will not provide for disability pensions, but it will be a matter closely related to this problem and to many other phases of activity with which our department would normally be expected to be concerned. . .

Mr. Fournier (Hull): I move the adjournment of the debate.

Mr. Speaker: Mr. Fournier (Hull) moves the adjournment of the debate. It is six o'clock.

Mr. Fleming: We should have a vote on the motion.

Mr. Speaker: It is six o'clock.

The Problem of the Older Worker

Memorandum on Canada's ageing population prepared by the Information Branch of the Department of Labour for presentation at the December meeting of National Advisory Council on Manpower is reprinted below

This memorandum was presented to the National Advisory Council on Manpower, December 10, 1952, by G. G. Blackburn, Director of Information of the Department of Labour. The Council decided that a sub-committee be established to examine the problem of the older worker using the memorandum as a basis for further study so that specific recommendations could be presented for consideration by the Council.

Section I: The Problem

The fact that Canada's population is growing older coupled with trends which result in rejection or withdrawal from employment of an important proportion of our older workers constitutes a national problem demanding close scrutiny.

In 1881, the number of Canadians over 40 constituted 20 per cent of the population; by 1951 this had increased to approximately 32 per cent. When we consider this trend in relation to the fact that one of the chief difficulties facing the National Employment Service in matching unplaced applicants with unfilled jobs is the tendency on the part of employers to reject applicants over 40 (over 35 for women), one major aspect of a serious problem is exposed.

Again looking at population figures: in 1881, there were 15 adults under 65 to every one over 65. Today there are only seven adults under 65 to every one over 65. By 1971, it is estimated that there will be only five to one. When we consider the effect of the trend towards more pension plans with compulsory retirement rules, now normally set at 65, another major aspect of this problem is seen.*

From the point of view of the national economy, the question arises whether or not it is economically possible to maintain a high standard of living in the face of trends which see increasing numbers of older people rejected or withdrawing from the productive section of society, reducing their ability to consume goods and services (at the other end of the age scale more are remaining at school longer), while the burden of production, taxation (part of which must be for old age assistance), etc., must be borne by a decreasing percentage of the population, a trend not likely to diminish.

Recognizing the fact that in the face of a marked reduction in recent years in the work day and the work week, increased production and broadened distribution of goods and services have still been possible through technological advances, we might reasonably expect also a shortening of the life work span without serious effect to the economy of living standards. However, although we may anticipate desirable trends suggested by the promise of atomic power, electronic brains and "push-button factories", at the same time we must recognize that the technological advances over the years have resulted in a more productive work-life, not elimination of work-life. It is one thing to take the best possible advantage of the most productive hours of a worker within a 24-hour or seven-day period. It is quite another matter to eliminate the worker completely before his productive years are over.

In the matter of this trend towards more older people being put on the shelf there are serious considerations in relation to the possibility of the increasing demand for extension of state old age assistance. Since so large a percentage of adults with their relatively high importance in matters of national policy have a stake in state old age assistance, there is, in possible growth of the idea of a utopian old age based on state assistance, a danger that must be examined objectively, so that any economic fallacies may be exposed.

The following table indicates the extent of pressure which the productive economy is bearing, and would bear if people live increasingly longer and are encouraged or forced to demand state assistance at earlier ages or in growing dollar amounts.

*In June 1949, of 7,412 manufacturing firms surveyed, 1,456 had pension plans as compared with October 1, 1951, when of 6,755 surveyed, 2,078 had pension plans—*Dominion Bureau of Statistics, and Economics and Research Branch, Department of Labour.*

ESTIMATED ANNUAL COSTS OF PENSIONS PAYABLE WITHOUT MEANS TEST TO CERTAIN OLDER AGE GROUPS IN AMOUNTS OF $40 AND $60 MONTHLY, 1951, 1961, 1971

Age Group	Year	Number of Persons in Age Group	Annual Cost of Monthly Pensions of	
			$40	$60
			$	$
70 and over, both sexes	1951	674,500	323,760,000	485,640,000
70 and over, both sexes	1961	869,300	417,264 000	625,896,000
70 and over, both sexes	1971	1,042,100	500,208,000	750,312,000
60 and over, both sexes	1951	1,631,900	783,312 000	1,174,968,000
60 and over, both sexes	1961	1,969,700	945,456 000	1,418,184,000
60 and over, both sexes	1971	2,366,900	1,136,112,000	1,704,168,000

SOURCE: Report of The Joint Committee of The Senate and House of Commons on Old Age Security, June 28, 1950—Page 100.

Another consideration of immediate importance is whether or not there will continue to be sufficient manpower available to maintain the present rate of expansion in Canada in the next few years in the light of the following facts.

At the present time, the supply of new entrants to the labour force as a result of natural increase in population is at a low ebb because of the low birth rate of the depressed thirties.

This situation is likely to continue for the next eight years. If the labour force is to maintain the rate of increase of recent years, it must be accomplished by immigration or the reclaiming of workers from the older worker potential or those with physical handicaps. The rate of immigration is based not only on the ability of industry to absorb workers, but must also be related to such other factors as housing. It can easily be seen that the reclamation of a section of the Canadian labour potential could be accomplished with fewer difficulties than are associated with the assimilation of immigrant workers, particularly as this applies to housing accommodation. Also, the desirability of immigration notwithstanding, there is an obvious responsibility towards Canadian citizens involved in the question.

To quote the Joint House of Commons-Senate Committee on Old Age Security:—

> Not only is this a matter of importance to individuals themselves in terms of their health and mental outlook, but it is of even greater importance to the overall economy of the country. Surely a country like Canada, with a wealth of natural resources still in large part undeveloped, is justified in having profound faith in its economic future. If we are to develop these resources adequately, we shall need to retain in active undertakings the largest possible number of our nation's population. The Committee believes that, in the years ahead our economic progress and prosperity will depend in significant measure on the success of efforts made to utilize to the fullest possible advantage the mature skills of these older workers.

The extent of the labour potential represented by the older worker group seeking and needing work is difficult to estimate accurately. The number of unplaced applicants 45 years and over registered with the National Employment Service varies with economic conditions but has represented, regardless of season, about one-third of the total registered applicants at any given date in the post-war period. Unplaced applicants by age group recorded by the Employment Service as of July 1952, were as follows:—

—	Unplaced Applicants by Age Group				Total Unplaced Applicants
	Under 20	20–44	45–64	65 and over	
CANADA	**28,264**	**94,002**	**37,087**	**76,361**	**175,714**
Male	15,425	59,705	27,941	15,247	118,318
Female	12,839	34,297	9,146	1,114	57,396
Percentage—					
Distribution of Unplaced Applicants (M)	13·0	50·5	23·6	12·9	110·0
Distribution of Unplaced Applicants (F)	22·4	59·8	15·9	1·9	100·0

The percentage distribution of unplaced applicants in the two groups from 45 years and up remains approximately the same regardless of the season, for male workers. This is illustrated as follows: January, 1951—36·2%, April, 1951—36·6%, July, 1951—37·1%; January, 1952—34·7%; April, 1952—33·7%; and July, 1952—36·5%.

It will be seen from the above that 36·5 (23·6 + 12·9) per cent of all unplaced male applicants in Canada at the end of July were 45 or older.

In considering this point, it is also of importance to compare the percentage of unskilled in the various groups. An average for the year 1949 (latest year examined) showed that only 36·5 per cent of all applicants 45-65 were unskilled, as compared with 62·9 per cent of those 20 years and under and 38·3 per cent for those 20-44. It will be seen from the foregoing figures that judged by degree of skill, the 45 and over group should actually have an employment preference.

If for purposes of study we eliminate the 20 years and under group on the basis of the large proportion of unskilled in this group and compare the older worker group only in relationship to those 20 and older, the 45 and older group seeking employment increases to 40·2 per cent.

The above figures cannot be said to represent the total unemployed older workers willing to work, since many more may have become discouraged through failure to find employment and have not continued to register with the Employment Service.

Neither do these figures include a great many potential applicants on retirement who might be willing to re-enter the labour force.

Age restrictions vary with the occupation, the industry and even the locality in which the employer does his hiring. For example, the employer with openings in one occupation or industry may refuse to consider any worker over 35 for retail sales, while he may be willing to hire workers 45 or even 60 in his warehouse. Although employers relax age specifications in a tight labour market, age restrictions do persist in the tightest of markets. The opinion that full or expanding employment provides a complete solution to older workers' job problems is false (*See* preceding table).

So much depends upon the degree of skill involved, the industry, the prevailing conditions of the labour market, the personal qualities and qualifications of the individual, that an overall generalization about workers 40 and over often will not apply to individual workers.

Older workers who lose their jobs tend to remain unemployed longer than younger persons.

Many older workers, if unemployed for some time, suffer a lowering of morale which further aggravates their problem.

Although many older workers have physical handicaps, these handicaps do not appear to have as serious a bearing on their problems of finding employment as for a younger worker with a disability. The older worker appears to compensate better for his physical disabilities than younger physically-disabled job applicants.

Nearly all collective bargaining provisions contain seniority clauses which offer some protection to older workers while they are employed but protection of employed older workers does not alleviate their job problem when they are unemployed. Displacement occurs as individual industries, plants and occupations shrink or are replaced by others. To some extent retirement plans limit the hiring of older workers. But many restrictions in hiring policies are built on misconceptions and unawareness of the fact that age is an individual condition which has little significant bearing on the overall qualifications of the worker. This, however, will be dealt with in the next section.

It should be recognized that the problem of the aged is not the only employment problem faced by industry. There are groups concerned about the problem of employment of youth, the problem of employing physically-handicapped, etc. There seems to be only one practical solution to this combined problem and that is to make every effort to place each individual on the type of work for which he is physically, mentally, and psychologically prepared so that he can be of the greatest service to himself, his employer, and society as a whole.

Again to quote the Joint House of Commons-Senate Committee:—

> As large numbers of persons reach what may, under present circumstances, be considered the normal ages of retirement, and as they find themselves in better health, it may be expected that they will show increasing reluctance to accept the inevitability of retirement at such ages. It is in the interests of the individuals themselves and of the country as a whole that we should re-think our attitude towards continued gainful occupations of these older age groups.

Section II: Historical Development of Problem

Since the beginning of history, there has been a natural preference for the younger worker in certain lines of endeavour which demand the vigour of youth. However, the long apprenticeship and experience necessary to produce fine craftsmen and skilled

workers, before the machine age, placed the older worker generally in a favoured employment position.

With the mechanization of industry and the changing methods of production, more and more of the older, highly-skilled craftsmen became unnecessary as more and more their finely-trained fingers were replaced by precision machines. Along with these changing economic conditions came gradually the state of mind which has been aptly described as "accent on youth". Everywhere the stress was laid on the mental and physical agility of the young worker. Machines were speeding up the tempo of life and industry. Young men were faster. Therefore, it was a young man's world.

This atitude on the part of employers first came into prominence in Canada in the twenties. During the early thirties young and old were thrown out of work but then, as the country slowly struggled from the morass of the depression in the years immediately preceding the war, it was evident that the older worker was having more difficulty than the younger one in becoming re-employed. Then came the war and, as it progressed, the shortage of workers to a great extent eliminated the older worker's problem of getting a job.

Reconversion and the rehabilitation of ex-service personnel caused a wide redistribution of the labour force and again the question of employers' disinclination to hire the older worker came to the fore.

In view of older persons' general stability, industrially as well as socially, it has been asked why there are now so many over 40 unemployed and looking for work. To find the answer we must consider our economic position since 1930. In the early years of the depression thousands of young men in their late twenties or early thirties were unable to get employment. Many more took odd jobs which did not fit them for any particular line of work. When war came ten years later, they were able to find employment or join the armed forces. However, their wartime experience again often did not afford any degree of permanency and they were faced at the end of the war with still looking for career opportunities, although they were by this time over 40 years of age. We might presume that under normal conditions covering the last 20 years—normal in the sense of an even employment market—these men might have stayed with the same firm and have built up their experience and their reputation with these firms so that they would have a high degree of security.

However, this was not the case and some of our larger National Employment Service offices, Toronto for example, had on their books at one point a few months ago sufficient over-40 applicants with sufficient training and experience to completely staff a small plant. That is to say, they had supervisors, foremen, accountants, clerical and other help. In a great many cases these men had obtained their experience and training in jobs of a temporary nature during the past two decades.

Section III: Obstacles in Way of Full Use of Older Worker Labour Potential

Although up to this point we have discussed the subject from the point of view of "a problem", it is suggested that it might be advantageous to consider the older worker as valuable labour potential with problems and qualities different from youth but needing similar considerations and efforts for proper assimilation into and within the work force.

It has been said:

> The biggest single obstacle to the full utilization of the older workers is the preoccupation of employers with dwindling or non-existent supplies of workers in younger age groups. In other words, refusal to hire older workers and insistence on age specifications which deny them employment is the big obstacle we face in meeting labour force expansion requirements.

As mentioned previously, age as a barrier to seeking employment varies so widely from occupation to occupation and from individual to individual that it is difficult to make a summary of the obstacles but, for purposes of study, here are what appear to be the most common specific obstacles:—

(1) Employers' prejudice against the hiring of older workers based on the following assumptions:

- (a) older workers are not as adaptable to learning new techniques;
- (b) accident frequency and absenteeism through ill health increase with age;
- (c) old age brings slowdown, lessens productivity.

(2) In-plant training programs, which call for hiring young workers and developing them over the years, make it unprofitable to invest in training of an older employee.

(3) Pension plans which employers often maintain prevent them from hiring workers of advanced age. (They claim that not only is the older worker not able to fit into pension plan contributions and benefit schemes but that pension plans encourage workers to remain with the firm, thereby

increasing the age level of the whole staff and demanding that new entrants must be young.)

(4) A belief by employers that the public prefers younger workers for jobs requiring public contacts, such as waitresses, clerks, office workers, salesmen, etc.

(5) Collective agreements which tend to prohibit reduction of remuneration for reduced production, for workers in the advanced age group.

(6) Pension plans which compel workers to retire at an arbitrary age regardless of fitness to carry on.

Section IV: Are Obstacles Rooted in Fact or Prejudice?

All must agree that employees in the older age-group should be selected as carefully, with regard to their physical and mental qualifications, as those in any other age-group. The danger arises in the tendency to judge those qualifications solely on the basis of chronological age. Everyone knows, from his own observations, that the number of years a person has lived is no sure basis for estimating his capabilities. Far more accurate is a consideration of his physical and mental condition.

During the thirties, when jobs were hard to get, emphasis was placed on early retirement to leave jobs open to young people. It would appear that we are still confronted with this out-of-date thinking. A man reaches 50 and it is generally taken for granted that his physical capacity is extremely limited in comparison with what it might have been at age 30. There is, of course, a basis of truth underlying such sweeping acceptance—most men at 50 cannot do all the things they could do at 30 or 35—but what is so frequently overlooked is the simple fact that a person does not need to be able to run as fast, lift as much, move as quickly, etc., as he once did in order to perform satisfactorily the vast majority of jobs in modern industry. Very few jobs require the physique, stamina, or condition of an athlete.

Because of the almost universal thinking on the subject, people, when they reach middle age, are apt to consider themselves as past their prime, only fit for a few jobs, with the result they may unwittingly be limiting themselves in employment opportunities.

The weakness of thinking in terms of chronological age lies in the classing, in the same physical category (in relation to work capacity), of all individuals in an age group. Such generalization overlooks the physiological, biological, or psychological factors involved.

All of us tend to fall into the error of considering all persons beyond a certain age as "old", although our ideas on the subject tend to change significantly as we pass each decade of our own life.

One of North America's well-known authorities on ageing processes, and Chairman of the Sub-committee on Geriatrics of the New York County Medical Society, Dr. C. Ward Crampton, says: "Today a man of 60 may be as young, vigorous and vital as the average man of 40. On the other hand, he may present the common picture of the man of 80—old, weak, and miserable." In other words, "old age" begins at no particular birthday. It is rather an individual matter which varies with each person. All of us know of persons who, though they have passed their 70th or 80th milestone (many of them nationally and internationally known), are mentally agile and youthful in outlook.

Referring to the ageing process, Dr. Edward J. Stieglitz, a leading U.S. geriatrician, informs us:—

> The changes which come are not all decline. I think there's a general opinion that it's all down-hill. Speed of reaction does diminish; but endurance increases in certain capacities. It is not without significance that the records for all the sprints are held by youngsters but the marathon records are held by men 38 to 45 and have been for many years. Endurance of a certain type, for the long, slow grind, the continuous type of labour operation, increases. As speed declines, skill is increased with practice and, as strength declines, judgment increases. The mental changes are not all decline either. There is some depreciation in the ability to learn but it is extraordinarily less than the average person assumes.

Dr. Stieglitz adds that you certainly can teach an old dog new tricks if the old dog wants to learn, and if the teacher is smarter than the animal.

An eminent physiologist, Dr. Anton J. Carlson, states: "The physiologic age of the worker is not synonymous with his chronologic age, owing to the individual variables in heredity, mode of living, accidents and sequelae of disease."

Dr. Nathan W. Shock, Chief of Cardiovascular Diseases and Gerontology Section, U.S. Public Health Service, says:—

> *It should be pointed out that no differences in efficiency in the performance of moderate work are observed between the ages of 17 and 71 years. This finding is of considerable importance since most work of an industrial nature falls within the classification of "moderate work".*

Unfortunately, a great deal of research is yet to be done in establishing the stress characteristics of various kinds of work and performance.

A further observation of great significance is that wide individual differences occur in the rate and degree of ageing observed. Thus, in any particular function we may care to choose, we will find some individuals who are in the 70- to 80-year age range with physiological capacities equivalent to those of a 30- to 40-year old.

The existence of such wide individual differences emphasizes the fallacy of requiring retirement in workers at any fixed chronological age. It also brings to focus the importance of research to develop quantitative objective tests to determine the fitness of the individual for continued work. The success in developing personnel selection at the intake side of industry leads us to regard with optimism the prospect of developing similar techniques for selection in retirement.

At the public hearing of the New York State Legislative Committee on Problems of the Ageing held in December 1948, it was pointed out by a number of medical men that variations can, and do exist, between chronological age and physical age. They deplored the fact that so many employers failed to recognize these variations in their hiring policies.

The consensus of the experts who addressed the public hearing in New York could be summed up as follows:—

1. Chronological age is a useless standard for measuring value of workers.
2. However, to eliminate it, it must be replaced by some other standard.
3. Physiological age could be this standard.
4. This, however, is not likely to be universally accepted as a standard until complete physiological histories are available for most work applicants and employees, including top executives.
5. Complete physiological histories could only be obtained by periodic medical examinations over a period up to 20 years, coupled with the complete medical history of the person's close relatives and immediate forebears.
6. The purpose of the study of geriatrics was to understand completely the limitations of the individual at the various stages of his life, so that steps could be taken to prevent further deterioration by medical means or by reassignments to more suitable employment.

From the opinions outlined it would seem impractical and unfair to judge ability to perform specific tasks solely on the basis of chronological age. Approaching the subject in full justice to both employer and employee, it would seem only reasonable to judge each individual's work-performing age by taking into consideration all the factors concerned in his particular case.

Let us examine now the specific points outlined in the previous section:—

(1) "Prejudice Against the Hiring of Older Workers"

(A) *Older Workers' Ability to Learn and Adapt Themselves to New Techniques*

It was the experience of many Canadian employers during World War II, converting to war work, that older workers readily learned new techniques as long as the new work did not break entirely with their past experience.

Here is the experience of the Institute of Psychological Research, Teachers' College, Columbia University, dealing with the training and retraining of several hundred older workers. They found that the intellectual power in and of itself does not change from about 20 to beyond 60.

In some of the so-called intellectual abilities there is a modicum of gain. Teaching Russian to 300, there was no significant difference between the young and old in the amount of Russian learned. They then tried the teaching of skills which would be useful in industry. Some of these skills were mechanical and some were clerical. It was found that there was nothing in terms of the kind of skills that had to be taught that old people could not learn. Moreover, older people have a tremendous capacity for the utilization of experience, of stored knowledge in applications to new problems and new devices. There was an obstacle, however. The problem was to convince the old persons that they were capable of doing it. This obstacle was considered a consequence of widely accepted fallacies.

(B) *Does Accident Frequency and the Absenteeism Rate Increase with Age?*

Most employers will agree that work-reliability and low-percentage absenteeism go hand in hand and are most important factors to be considered when hiring help. Frequent absenteeism usually means unreliable workers who can be very costly to a firm.

It is in work-reliability and low-percentage absenteeism that the middle-aged or older worker really proves his worth:—

(i) Claims that accident frequency tends to increase with age are shown to be incorrect by statistics prepared by the Industrial Accident Prevention Association of Ontario. Their studies show that the highest accident-frequency rate occurs for the age group 20 to 24 and the lowest occurs in the age group of 30 to 55. This is reflected in accident insurance premiums which remain almost constant for ages between 20 to 64.

(ii) Accident-frequency and absenteeism figures would seem to prove the older worker a more reliable employee. The following table was produced by a survey made by the Bureau of Labour Statistics in the United States and published in 1948:

Age Group	Absenteeism per 100 work days	Non-disabling Injuries per million work hours
All age groups	3·4	980
Under 20 years	5·5	1,230
20—24 years	4·9	1,500
25—29 years	4·3	1,560
30—34 years	3·6	1,420
35—39 years	3·4	1,240
40—44 years	3·5	1,050
45—49 years	3·4	990
50—54 years	3·3	740
55—59 years	2·8	630
60—64 years	2·9	560
65—69 years	3·3	430
70—74 years	3·2	320

From the above, it is seen that the 65 to 74 years' *Absenteeism Rate* is the same as for workers 35 to 54. It is only beaten by the record of workers 55 to 64.

The older workers' *Accident Rate* is better than for any other age-group, with the 70- to 74-year group by far the best of all. The 70 to 74 have 320 disabling injuries per million work-hours as compared to 1,500 disabling accidents per million work-hours for the 20 to 30 years' old group.

(C) *Does Age Bring a Slowdown in Productivity?*

In a pre-war survey of the automotive industry in the United States, it was found that in this industry, where wages were largely on a piece-work basis and high speed production was the rule, earnings reached their peak in the age group between 50 and 55 years. In a similar survey of New England textile plants, the Massachusetts Institute of Technology found that earnings were slightly higher for men age 45 to 54 than for either older or younger workers. Another U.S.A. survey by the Works Progress Administration, of brick and stone masons, carpenters and painters working on construction projects in seven cities, showed that the average age of all workers judged excellent, in quantity of work turned out, was 46·6 years.

The U.S. Department of Labour reports that: "Undoubtedly, old age weakens ability on those jobs requiring energy and speed. But even on such jobs, the decline from age 50 to 75 is slight and varies with the occupation."

A report of the Harvard Fatigue Laboratory stated that, "the assumption of a rapid decline after 40 years of age in the quality and quantity of work is a social myth which, though in some respects not misleading, is in general grossly inconsistent with the evidence."

(2) What About In-plant Training Programs?

Is the hiring of older workers discouraged because of programs which call for hiring young workers and developing them over the years, in the belief that it is unprofitable to train older workers?

There are so many variables connected with this question that it is difficult to answer without examining each case on its merits. If all the other misconceptions were to be eliminated, this would undoubtedly be resolved in most cases. Where an employer rejects the applicant of 45 for a job requiring training of sufficient length to be an important consideration, he is rejecting him on the basis of 20 years' or more service not being sufficient return for the training expense. The question immediately arises: Can he reasonably expect an average service from all his young entrants to be longer than 20 years? Actually, Employment Service placement officers have found that, when examined, the period of training for many jobs withheld from older workers is so short as to have no real significance in choosing the employee. Further, the older worker contributes less to labour turnover costs than the younger worker.

(3) What About Health and Retirement Pensions?

Can the older worker be absorbed into these plans without throwing them out of balance?

The use of group insurance costs as an argument against the hiring of the older worker is not as forceful as it might seem when a study of actual rates is made. One large Canadian life insurance company quoted the following rates:—

Group life insurance—age 25—$6.27 per $1,000 annually.

Group life insurance—age 40—$7.85 per $1,000 annually.

It can be seen that the addition of a percentage of middle-aged or older workers would not add materially to the overall costs.

Pension plans would appear the most logical of the reasons for preferment of younger workers and, of course, employers' prejudices may differ in degree according to the type of pension plan in force.

One type of pension plan in use is the "salary-service" type, where a portion of the final pension is purchased with the contributions of each year and the final pension is a proportion of the average pay over the whole period of contribution. The employee usually contributes a fixed percentage of pay and the employer contributes the balance required. The employer's contribution will vary slightly with the average age of the employees in the plan. For a plan involving five-per-cent contributions by the employee and retirement at 65, the total cost to the employer would be about five per cent for the working period until retirement if all employees commenced at age 25. If all employees entered at 40, the employer's cost would be increased to about seven-and-a-half per cent. However, for all employees to be 40 when they entered the plan would be a most unusual case. It can be readily seen from these figures that a proportion of new workers aged 40 or over, unless constituting an abnormally large percentage of all employees, would have only a minor effect on total pension costs.

Many firms feel that having an employee pension plan is an inducement to their staff to remain with them for the duration of their working life. By hiring older workers, they would eventually have an almost complete staff of older employees which they feel would not be conducive to maximum efficiency. In such cases, the pension plan, while still the indirect cause of this attitude, cannot be classed as the actual reason for discrimination.

The significance of the indirect influence of the pension plan is sometimes reflected in the attitude of smaller employers. A small firm may take a large firm as a model, patterning its policy along the same lines as the larger firm with the idea of obtaining the same degree of efficiency. The policy of the larger firm may be to have an age limit of 40 or 45 in their hiring. The smaller firm decides this must be necessary in the interests of efficiency and makes similar regulations. The smaller employer may never have considered that the cost of the larger firm's particular type of "pension plan" was the probable reason for the regulation and that, as he has no "pension plan", this reason has no bearing on his own case.

In many cases like this, "pension plans" may be the indirect cause of the failure of many qualified older persons to obtain employment with small firms, perhaps being a greater cause for discrimination than the "pension plan" itself.

(4) What About the Belief by Many Employers that the Public Prefers Younger Workers for Jobs Requiring Public Contacts?

There is no evidence available to the Department to substantiate this assumption that the public prefers to be served, or sold to, by a young person. On the contrary we can all cite personal experiences to prove that older people are often more poised, and more diplomatic, with a greater understanding of what the sale or service involves.

(5) Do Collective Agreements in Some Instances Tend to Prohibit a Plan of Reduced Remuneration to Advanced-Age Employees for Reduced Production?

In certain occupations, particularly as it applies to the worker with a very advanced physiological age, this appears to be a problem in need of consideration, by both labour and management. Dr. A. J. Carlson, before the Fifth Annual Congress on Industrial Health, Chicago, January 12, 1943, stated:—

> Normal ageing is not like a sudden or acute disease. A man is not worth 100 per cent today and worth nothing tomorrow—if it happens to be his 65th or 70th birthday. People gradually grow old and less efficient, just as they gradually grow up and become more efficient.
>
> That industrial jobs can be provided is exemplified in the "Old Man's Division" in the Dodge plant of the Chrysler Corporation in Detroit, where the ages of the workers average 66, and some of them are over 80.

Dr. Carlson suggested that a wage scale proportionate to performance would allow older workers to "taper off" industrially and to work as long as failing powers permit.

The following general work formula to be used in relation to remuneration was offered:—

(a) The younger worker: physical strength and endurance growing, but not at adult par; skill and experience growing, but not at adult par—less than adult performance and pay.

(b) The adult worker: strength and endurance at maximum; experience and skill near or at maximum—maximum performance and pay.

(c) The older worker: physical strength and endurance receding, experience and skill at par—generally less than adult performance and therefore less pay.

There is in this formula outlined above the suggestion that some form of testing must be devised, and be acceptable to both labour and management.

(6) This, of course, is tied in with the question of *whether or not retirement at 65 is good business in cases where the worker wishes to continue working and is fit to carry on.* If, on the basis of what has been said up to this point, it can be agreed that we cannot continue to afford the loss of highly trained and experienced workers after 65 and at the same time take the word of the geriatrician that a good proportion of these workers being placed on the shelf are still vigorous and highly productive workers, then it appears to be essential that some way be found for relaxation or extension of the arbitrary age limit of 65 which is generally accepted as the date for retirement.

Dr. Carlson's statements reported above have a bearing on this question.

Also, the New York State Joint Legislative Committee on Problems of the Ageing recently included in their findings and recommendations to the Governor and State Legislature the following statement on retirement:—

> America approaches a crisis in dealing with retirement. The common policy of requiring retirement at age 65 no longer meets the needs of the country. It discourages men and women from contributing to the productive forces of our nation. It adds to the load of non-producers to be carried by the producers of the economy. It is an obsolete index of a by-gone era when at age 65 men and women had exhausted their vitality. It may be an important factor in premature failing of workers' physical and mental faculties.

Miss Ollie A. Randall, Consultant on Services to Aged, Community Service Society of New York, has stated:—

> There is a great deal of talk about this (retirement) on an organized permanent basis. Yet apparently most of this preparation is still aimed at helping the individual accept the fixed or compulsory date of retirement, rather than being aimed at securing the much needed reliable data as to the possibility of giving the individual the right to choose whether he will go on working or accept the plan for retirement.

When we consider all the arguments in favour of employment for workers past 65, it is easy to understand why some consideration is being given to extending actual retirement from the "normal"—65. It is interesting to note that the City of New York sets a maximum retirement age for its employees at 80! Although this is rather exceptional, according to our research, it is an indication of the awareness of the growing need of providing employment for the elderly and at the same time the practicability of such practice. None of us could possibly suggest that New York is a spot where competition and pressure of work would be slowed down to take advantage of slow and non-productive workers.

Others commenting on the problem are:—

A. R. Mosher, President, Canadian Congress of Labour:

> No one will suggest for one moment that a worker whose faculties are impaired by age or other conditions has a right to employment which he is incapable of performing efficiently. On the other hand, there are in practically every industry a variety of occupations which do not demand the quickness of hand or eye which may be expected of younger workers. During the war, when the demand for the services of everyone who was useful or could be made useful through training were required, it was found that older workers were able to make a highly valuable contribution to the war effort. They were steadier and more dependable; their record with respect to absenteeism was extremely good, and they were able to perform the duties assigned to them in a wholly satisfactory manner.
>
> Admittedly, the work at which older persons were employed had to be carefully chosen; they were not asked to perform highly-skilled work, unless the tests given to them showed that they were capable of doing it. It was clearly demonstrated that older persons had remarkable ability to learn new jobs, and they took a pride and satisfaction in their work because they felt that their ability was being recognized, and utilized in a worthy cause.
>
> It is noteworthy that, while industry and government lay down a fixed retiring age of 65, persons who are self-employed, running a corner grocery, a bookstore, or a cigar-stand, may continue to earn a good livelihood and manage their affairs efficiently even in their eighties. The same observation applies to farmers, who are usually quite capable of operating their farms, from an administrative standpoint, at least, until they reach an advanced age.
>
> It seems to me that a definite change of policy with regard to employment of older persons is essential. I firmly believe that, so long as an older worker has any

contribution to make toward the productive capacity of the nation, he should be permitted to make it. Not only is this important from the standpoint of increased production, which is essential to the improvement of living standards, but it is also important from the standpoint of the older person himself. (*Canadian Unionist,* May and June 1952.)

Harry Becker, Director of the Social Security Department, United Automobile Workers of America, CIO:

There is a fourth principle which is important—a flexible retirement age. Workers' security programs should permit workers to retire at the point at which they become superannuated. Workers should not be required to retire at a fixed age. The proper point for retirement differs for each individual and the reasons for retirement likewise vary from individual to individual. Therefore, there should be sufficient flexibility with respect to retirement age to permit each worker to retire on an individually-determined basis. This means that retirement should be permitted throughout the span of years in which workers most frequently become superannuated.

A flexible retirement age is needed because superannuation is only in part related to the individual's chronological age. The onset of disqualification because of old age and infirmity is also a function of the original equipment of the individual, of the effects of environmental factors, and of the appearance of chronic conditions. A worker may become superannuated before 65 as well as after 65. Age 65 has been most often adopted as the retirement age because it has been thought that persons tend to outlive their usefulness on the job at about this age. Age 65 has been generally accepted as the average age for retirement of salaried or office workers.

If it is desirable to permit retirement for sedentary workers at 65 it follows that persons engaged in physical work should be permitted to retire somewhat earlier, if they so desire. There is considerable support for age 60, or even an earlier age, as the point at which retirement may be permitted. For some individuals, however, superannuation may not occur until some years after 65. This variation between individuals as to when superannuation takes place is recognized in labour's thinking about retirement age.

Dr. Charles A. Pearce, Director, Division of Research and Statistics, New York State Labour Department:

One alternative to compulsory retirement is the transfer of older workers to jobs more suited to their abilities. Such transfers may require retraining. Another alternative is the provision, with or without wage adjustments, of a less rigid schedule of attendance or hours or of other similar adjustments on the same job. The alternative may simply involve an examination and determination by the employer that the individual can continue to perform the job in the same manner he has for years. In large firms, among which the compulsory retirement system is more prevalent than in small firms, these individual determinations and adjustments undoubtedly are troublesome and may be costly. Transfer possibilities may be very limited. Employers, moreover, may fear that under a policy of individual consideration, they might be accused by unions and individual employees of favouritism and discrimination. Some unions undoubtedly are concerned about the possibilities of discrimination present in such a policy. This policy of accommodation does exist in many large firms.

P. C. Wolz, Assistant Superintendent, Industrial Relations, Eastman Kodak Company:

There has been much said both pro and con regarding retirement at various ages. It has been generally accepted by industry and labour that a retirement plan is conducive to good, overall results. It doesn't seem good or reasonable to require any individual to carry on until the day he is carried out on a shutter. If there is to be any retirement plan there must be, of course, some age stipulated, Whether or not the age is adhered to strictly is a matter which seems to present very little difficulty in administering. The fact of the matter is that there are a great many employees asking for retirement before the age of 65.

It does not appear that there is any great problem as far as retirement is concerned in those industries having retirement plans. The major problem is probably in locating suitable work for those over 60 who happen to be out of employment for some reason or other. The problem here, as is well known, is that many of these people do have various physical limitations that require considerable thought and care in making certain that they are not placed on work detrimental to their own physical condition.

In the Eastman Kodak Company, and particularly at Kodak Park where there is a very large variety of jobs, we have designated a number of less arduous jobs to which we transfer employees who have definite physical limitations. This program permits us to retain the older employees and use them on productive work without the danger of contributing to their disability. Some of these are transferred at their own request and others are designated by the medical department.

There is another very good reason for the retention of employees in the higher age brackets and that is to retain and make the best use of any skill acquired over a long period of years. In following a policy of this sort the industry accomplishes two purposes: first, in makes it possible for the individual to continue to use his own efforts in behalf of his support and, secondly, society as a whole benefits because of his continued contribution to the production of a useful article.

This same principle can be and should be used in the placement of a new employee; however, in both of these instances it is necessary to make absolutely certain that permitting the individual to carry on will not induce any new physical impairment or accentuate an already existing weakness or physical ailment.

In a great many instances industry either retains or employs new people in the higher age brackets with skill and experience and uses them for the purpose of training younger employees. In such instances he is not expected to carry on the arduous parts of the particular task but to spend the major portion of his time and effort in passing on his knowledge and experience.

It is probably the experience of many industries that most people, with very few exceptions, either do not know or do not appreciate their physical limitations and are very apt to attempt to perform tasks that are far beyond their physical ability or endurance. It is human nature for all of us not to want to admit by either word or deed that we are slipping and to prove this a great many people are prone to exhibit their physical prowess or to show off to either their temporary or permanent physical detriment. This is one of the things that continually come to the attention of plant medical departments who are not only confronted with the responsibility of alleviating such injuries but to inaugurate an educational program for supervision of workers in determining the extent of physical effort expended by individual employees.

In spite of the enormous amounts of effort and money spent by industry in establishing and maintaining safety departments to prevent physical injury to employees and medical departments to alleviate the injuries, there will always be the individual who will take a chance. Therefore, the health, safety, and continued useful employment of not only the older employee, but all employees is a combined problem of the employment, safety, and medical departments.

We have no limit on age for the purpose of hiring; it is simply a practical question of whether or not the individual is physically able to perform some task that is available at the time.

From the book *Never Too Old*, published in 1949 by New York State Joint Legislative Committee on Problems of the Ageing:

The compulsory reirement age fetish which prevails in industry causes untold damage not only to the individual but to his company and sometimes to the world at large.

A most dramatic example of what such a crippling barrier might do were it not for an "escape" device can be seen at General Electric Co. This famous concern employs some of the world's foremost physicists, chemists and engineers. And these scientists stubbornly refuse to suddenly become senile, unproductive or inefficient when they reach their 65th birthday, the age at which pension systems usually decree workers must stop working.

So GE, aware that many of these "overage" scientists represent such a wealth of intelligence, experience and skill that the company and the world might suffer by putting these men "on the shelf", hires them back on contract—after retirement!

The Committee of the Public Welfare Division of the Canadian Welfare Council on the Needs of the Aged, stated in 1949:

There is an urgent need for a reconsideration of the work capacities and the work needs of older people. It is obviously wasteful and dangerous in an ageing society to permit workers to be dropped from productive employment between the ages of 45 and 60. This is a matter which requires urgent consideration. For their own sakes, and in the community's own interest, people able to work should be maintained in productive employment as long as they are willing and able to work.

Section V: Steps Taken by Department of Labour, NES and Department of Veterans Affairs to Widen Employment Horizon for Older Workers

Following a study of the problem early in the post-war period, it was decided by the Department of Labour and the National Employment Service that the problem stemmed largely from a state of mind among employers that persons over 40 were beyond their prime and therefore to employ them was not a wise policy. The facts uncovered showed clearly that to a great extent this attitude was based on false ideas, which were so widespread as to adversely affect the attitude of the older job applicant himself. On coming to these conclusions, it was decided that the first step towards ultimate solution lay in an actual change in the thinking and beliefs of employers generally, in certain instances the older job applicant himself, and re-education of the public as a whole. It has been towards this end that efforts have been directed. However, because this attitude had developed over many years, it was realized that the results of efforts to change it would make headway slowly.

Since 1946, a campaign has been waged through the facilities of the National Employment Service and branches of the Labour Department. This endeavour has been aided greatly by editors and free-lance journalists who have taken up the story to such an extent that almost every newspaper and periodical in Canada, at one time or another, has carried articles on the subject. These articles have endeavoured to explode fallacies and present the facts pertaining to people past middle age.

The following is an outline of the methods used to alleviate the situation:—

1. Publicity has been carried out by means of newspaper releases, articles, radio talks and personal contacts with employers by the National Employment Service placement officers. In the latter half of 1950 and early 1951, a Department of Labour

film was shown to about 60,000 business executives. (The film since has been seen by an estimated 200,000.) The film, entitled "Date of Birth", has been instrumental in actually changing the hiring policies of some firms.

(2) Co-operation with the Department of Veterans Affairs in their campaign for the employment of older veterans is maintained. This co-operation especially applies to the Corps of Commissionaires. Initial recruiting for the Corps, both of jobs and prospective Corps members, is assisted by the National Employment Service and the Department of Labour.

These are some of the steps that have been taken by the National Employment Service of the Unemployment Insurance Commission:—

(1) The middle-aged or mature applicant with a special trade or skill and in reasonably good health is dealt with in the normal manner in the general placements section of the office. In other words, age is not a factor here and the applicant is dealt with under regular procedures.

2. Where age itself is the main difficulty in obtaining employment, such applicants are referred to the special placements unit for a counselling interview. After counselling, in which agreement is reached on possible suitable types of jobs, these applicants are returned to the general placements officer for selection and referral.

(3) Applicants whose age is coupled with a disability are counselled in the special placements unit, given an occupational classification, retained, and, if possible, placed by the special placements officer. These applicants are regarded as needing more individual attention because of what might be regarded as a double employment handicap, age plus disability.

(4) Counselling is on an entirely voluntary basis and no applicant is coerced into accepting the services of a counsellor. Special placements sections or units have been established in all offices in the larger centres; provide the counselling service and, except in those instances where physical disability is coupled with the age factor, the applicant is returned to the general placements side of the office for attention, following the counselling process.

(5) The Federal Department of Labour film dealing with certain aspects of the older worker problem ("Date of Birth") has been used by local offices as a basis for a community campaign and the film has been shown extensively throughout Canada. Showings have been made to service clubs, Boards of Trade, labour groups and others, in addition to which there has been considerable newspaper publicity, apart from radio programs and other promotional efforts on behalf of older workers. It is felt that local campaigns and community effort to stress the more favourable aspects of older workers and to help to break down some of the employer prejudices are essential, if employment prospects for these applicants are to be improved.

(6) Test units have been set up quite recently in two offices (Montreal and Ottawa) and further units may be established elsewhere, depending on circumstances. These units are not specifically for older workers, but rather for any applicant young or old, for whom testing might be useful. This is an innovation, but these units will be used to assess the abilities and aptitudes of applicants referred to the testing technician.

(7) Local employment committees, particularly in the larger centres where the older workers are more numerous, have discussed and given special study to the older worker problem and have helped in various ways to publicize the need for judging older applicants on their merits and not on age alone.

(8) Officials of the Unemployment Insurance Commission have co-operated with the Department of Labour in a campaign of publicity.

(9) In December 1947, a counselling service for applicants for employment over 45 years of age was set up in Toronto by the National Employment Service. This service was opened on an experimental basis in an effort to help the unemployed older workers in the Toronto area to become re-established in satisfactory employment. The success of this experiment was in many respects remarkable and information gained from it has been passed on to other local offices.

Counselling is based on a study of the applicant's background, experience, ability and hobbies. From this study, an attempt is made to assess those qualities which have the greatest chance of being useful in the world of industry and commerce. Sometimes, counselling has led to an applicant discovering he had marketable ability or skill of which he was previously unaware. This discovery usually results in a renewal of self-confidence and determination which has often helped the applicant to such an extent that he has gone out and found himself a job. The very fact that there exists a service designed especially to aid the older person who is unemployed, is in itself a morale builder.

Generally speaking, there has been no attempt to over-emphasize the importance of older persons to the detriment of other groups; but officers have been encouraged to treat these people as individuals with abilities which employers in the majority of instances can still use and to stress that fitness for employment does not depend so much on calendar age but on the ability of the applicant to do a reasonable day's work.

In its first year of operation, the Toronto experimental Counselling Service interviewed 1,138 persons, who had been unemployed for periods ranging from two weeks to two years. Of the total, 630 secured employment after counselling, of whom 426 found jobs through their own efforts. Of those finding jobs, 266 were in the 45 to 59 age group and *299 were over sixty years of age.*

In this experiment, these men or women were interviewed as often and for as long a time as was necessary to learn their background—their experience, education, hobbies and interests. If necessary, a report on their health was secured from their doctor. They were encouraged to think of new employment possibilities for themselves and they and the counsellor together drew up a list of jobs in which they had a good chance of success.

In a surprising number of cases, the discovery of these possibilities was enough to stimulate the man to find a position for himself. In the other cases, since the Counselling Unit did not make placements, the man was referred to the Local National Employment Service Office. Here a liaison officer put him in touch with job openings specially selected from the employment files as being suitable for his age group.

Only six persons were found to be unemployable. All the others were discovered to be suitable for at least one occupation, and in most cases for more than one—183 were recommended for two jobs, 372 for three, and 338 for four, while two persons were found to have opportunities in eight types of employment. Here are two examples:—

A.B.—((55 years of age). Was an electrical engineer. He was very slight and frail. His physician stated that his health was average in spite of his appearance. After counselling, A.B. expressed the desire to teach in a university. He was advised to send a telegram to three selected universities stating that he was forwarding, that day, his credentials and records. He requested immediate consideration. Two offers of employment resulted.

He accepted one of these, an associate professorship in electrical engineering.

C.D.—(69 years of age). Was a strong and robust man. He had spent 38 years with a large national firm rising from office boy to office manager. Reported to have improved almost every business system with which he was associated. He had been unemployed one year. Our counsellor suggested that he might become a "resurrector of failing businesses". He obtained a job immediately with a small firm engaged in the rapid building of houses. Because of his energy and business experience he vitalized this business. In one month he was appointed a Director of the firm, and four months later became Vice-President!

On May 21, 1949, the officer in charge of the Counselling Service reported on the degree of continuity of employment of those older workers who obtained work after counselling. Here is part of his reply:—

> In keeping with your instructions we have contacted 135 persons (slightly more than 20 per cent) previously reported as having found employment after counselling. In order to be more than fair, we have chosen as our sample the first persons counselled (16 to 18 months ago) reported as being employed. Many of these individuals might reasonably be expected to have changed or lost their jobs in the long intervening period unless they continued to function satisfactorily in them. We are delighted at the large number still employed (90 per cent) and the great number working at the counselled jobs.

Section VI: Further Steps Which Might be Taken

Solutions to the problem of utilization of the older worker potential are all ultimately concerned with:—

(a) Retaining older persons in employment for as long as they are willing and are fit for their normal work or for such alternative work as can be provided.

(b) Removing the obstacles to the recruitment into employment of older persons who are able and willing to do the jobs available.

Here are steps which might be taken:

(1) A statement of national necessity and policy—On the basis of information already known and corroborated both in Canada and abroad by scientists, employers, and placement authorities, it is now possible to draw up a statement of national policy in such form as to be a general guide for all concerned with the subject—individual workers, individual employers, management associations, labour organizations, educationalists, etc.

The value of such a "statement" is not easily assessed, but the possibility arising out of focusing the attention of the leaders of government, industry, labour, educationalists and the general public on the broad issues inherent in the problem, and the ultimate trends of thought and action resulting, should not be underestimated.

An example of the above principle is a memorandum prepared by the U.K. Ministry of Labour and National Service which was endorsed by the National Joint Advisory Council, representing the British Employers Confederation, The Trades Union Congress and the Nationalized Industries. The memorandum may be summed up under two heads: (a) older persons should be retained in employment for as long as they want to continue, provided they are fit for their normal work or for any alternative work which can be provided for them; and (b) there should be no impediment to the recruitment into employment of older persons who are both

able and willing to carry out the jobs available. The memorandum states that "it does not mean that there is any intention of interfering with the present rights of employers or workers; retention of workers beyond what is regarded as normal retiring age should continue to be on a basis of voluntary contract between employer and employed. It does mean that (1) schemes and agreements providing for compulsory retirement at fixed ages should be reviewed and revised; (2) pensions arrangements which require retirement at fixed ages should be reviewed and revised; (3) any practices, agreements or special arrangements which make it difficult or impossible for older persons to be engaged should be reviewed and revised; (4) special working arrangements, hours and conditions of employment should be introduced, where necessary and practicable, to suit the special needs of elderly persons and to enable them to continue longer before retirement; (5) the desirability and practicability of segregating blocks of work for older persons should be investigated; (6) each industry and each individual firm should ensure that its personnel policy and practices are in line with national needs on this matter, and that the policy is understood and applied in practice by those responsible for engaging and retiring workers and staff.

(2) Necessary action which might be assisted by additional endorsation by the leading national management associations and labour congresses to bring about national recognition of the need for:

(a) employers to review their hiring policies and retirement policies to decide whether these policies are realistic in view of present and future labour requirements, both nationally and within industries.

(b) relaxation of retirement regulations to allow employees to continue in their jobs as long as they desire and are fit to carry on.*

(c) widespread adaptation of jobs to the maturing population thereby opening up new fields of employment for the older worker.†

(d) employers to consider where necessary the periodic reassignment of workers permitting the retention of older workers' productivity without danger of contributing to their disability. (In the manner of the Eastman Kodak program.)

(e) the development of community leadership in such matters as 40-plus Clubs, and special arrangements for employment of the older worker, such as can be accomplished by community councils. The community council can do much by capturing the interest of service clubs and other employer and employee organizations.

(f) employers to examine their pension plans to see whether the cost of hiring a percentage of workers in the older age group would materially affect the cost of the plan and whether such cost would not be offset by the services of the workers involved by such features as continuity of employment, lower absenteeism, etc.

(g) surveys by employers to ensure that the jobs not requiring special skills or manual strength are not being held down by younger workers capable of more productive work.

(3) Further research to provide authoritative and practical assistance to the solution of certain questions arising out of other recommendations. For example, the existence of such wide individual differences in ageing emphasize the fallacy of using chronological age for hiring or retiring, and brings up the importance of research to develop quantitative objective tests to determine the fitness of the individual for work or continued work. Successful programs in this and in other matters related to the problem carried out by Canadian firms should be examined and the information made available to all. Also there is need for investigations defining precisely the kinds of jobs most suited to the ageing, etc.

(4) Exploration of the desirability and manner in which geriatric projects could be more extensively developed and made use of in practical ways.

(5) Extension of counselling services provided by the National Employment Service.

(6) Recommendation that the National Advisory Council for the Rehabilitation of the Disabled should give full consideration to the special problem of the older worker disabled by age.

(7) Further extension of the educational and publicity campaign related to current conditions, and any recommendations forthcoming from this examination.

G. G. Blackburn,
Director of Information,
Federal Department of Labour.

---

*The Joint Committee of the Senate & House of Commons on Old Age Security—"The Committee believs that increasing emphasis should be placed on efforts to remove from people's minds the idea that there is any set or accepted age for retirement. Each individual in the nation's population should be encouraged to continue as long as possible in gainful employment."

†An analogy to this is the modern trend which sees the breaking down of a highly skilled job into several jobs requiring limited training.

Unemployment among Older Workers

Survey conducted in Belgium revealed that 42 per cent of unemployed men and 19 per cent of unemployed women were over 50 years of age. Unemployment among persons in that age group was found to be growing

Forty-two per cent of the totally-unemployed men in Belgium are past 50 years of age and 19 per cent of the totally-unemployed women are in the same age group, it is reported in an article on unemployment among older workers in that country in the December 1 issue of *Industry and Labour,* published by the ILO.

The results of a census taken in November 1951, of totally-unemployed workers receiving assistance from the National Employment and Unemployment Office reveal the existence of relatively heavy and growing unemployment among older workers. Neither the temporary improvement of 1950 nor the labour shortage in certain trades has produced any improvement.

According to this census, the average duration of unemployment for workers between the ages of 50 and 60 years is more than one year. It is as much as 21 months for unemployed men of 60 years and over.

In an attempt to assess the extent of discrimination against older workers at the time when vacancies are filled, an examination was made of the listed vacancies for one day at the regional office in Brussels. It was found that 80 per cent of the vacancies called for workers under 40 years of age. In some cases the age limits were fixed at 35, 30 and 25 years.

Among the 11 workers who were required to be no older than 40 were a lorry-driver, a fitter, an electrician and a cabinet-maker, as if, the writer of the article points out, applicants over 40 could not be expected to give satisfactory service in these occupations.

No age limit was specified for occupations requiring special skills, such as milling-machine operator, fitter, mechanic, joiner and house-painter. Vacancies for women listed on the same day bore age limits varying from 22 to 35 years. In one case a vacancy for a laundress required a woman under 45 years.

A further inquiry conducted by the National Office among 12 Belgian industries to ascertain the causes of the discriminatory attitude which employers often adopt revealed no definite trends because of the wide range of answers received. However, it was found that, generally speaking, industries employing a large number of skilled workers employ a relatively higher percentage of older workers than the others.

Older workers, the survey showed, are considered unsuitable where heavy work or shift work has to be done. On the other hand, older workers are taken on if they are skilled or possess special abilities. There are distinct differences on these points according to whether men or women are concerned.

Factors telling against older workers included the labour surplus in some areas where employers have ample choice in selecting the workers they need, the lack of mobility of older workers and the general rise in the average age of the population which overcrowds the labour market with workers whose average age tends to rise year by year.

Mechanization of operations does not always seem to result in an increase in the opportunities of employment for older workers, it was found. In many cases the latter have difficulty in adopting themselves to new methods and machines. Similarly, mechanization not only cuts down physical work but also abolishes a number of hand operations requiring a highly skilled labour force. This is particularly so in the linen industry. Employers prefer to recruit girls between the ages of 14 and 16 years who can learn the new mechanized methods of work quickly.

Those features of old age which lead to a lessening in the capacity for muscular work and in the alertness of the senses were considered by managers to be major handicaps. Consequently, the industries in which older workers find jobs are those in which skilled labour is essential but also in short supply among the younger age groups.

The older office worker in Belgium has the most difficulty finding a job, even though this occupation calls for experience due to age. This is because of the overcrowded conditions of the labour market and the contention of employers that the older office worker finds it difficult to adapt himself to new methods of work and that his output is generally lower than that of his younger colleagues. The age limit for most types of office work in Belgium is 35 years.

Wage-Rate Changes in Collective Agreements, First 9 Months, 1952

Almost 97 per cent of 879 collective agreements that became effective during first nine months of 1952 granted increases. Of the 320,000 workers covered, 92 per cent received raises. Thirty-two per cent of them gained raises of from 10 to 15 cents; 27 per cent received more

Wage-rate increases were provided by almost 97 per cent of 879 collective agreements that became effective during the first nine months of 1952 and that were forwarded to the Economics and Research Branch of the Department of Labour. The agreements covered 320,000 workers, 92 per cent of whom received increases. For the remaining eight per cent, wages were unchanged, with the exception of a small group of workers covered by an agreement in which wages were reduced by approximately eight cents an hour.

A breakdown of the increases by five-cent intervals (Table 1) shows that the most frequent increase was in the range of 10 to 15 cents an hour.* Slightly more than 30 per cent of the agreements covering a like proportion of the workers provided increases within this range.

An additional 42 per cent of the agreements provided increases in the categories above 10 to 15 cents but these agreements applied to only 27 per cent of the workers in the survey. About a third of the workers received increases of less than 10 cents.

Reductions in hours of work were called for in 105 of the agreements which provided wage increases. Employees whose hours were reduced numbered 24,270. Under two agreements covering relatively small bargaining units of workers, working hours were increased. Where working hours were reduced, wage changes tended to be greater than the average for all agreements so that take-home pay was maintained and, at the same time, a wage increase provided.

The 879 collective agreements on which the information in this study is based do not represent all agreements received in the Department or negotiated during the period. A further 220 contracts covering 17,111 workers were received and examined but, since these were either entirely new agreements or provided changed wage structures difficult to compare with previous wage scales, they were excluded from the statistical analysis. In addition, a considerable number of agreements, particularly among those negotiated during the later months of the period under review, had not yet been received in the Department.

*For purposes of this survey, wage increases expressed in terms of weekly or monthly rates were converted to cents per hour. In many cases, the agreements did not provide for a uniform increase to all employees; in such cases, the preponderant figure was used in the survey.

TABLE 1.—WAGE CHANGES UNDER COLLECTIVE AGREEMENTS, FIRST NINE MONTHS OF 1952

Distribution of Agreements and Workers Covered by Category of Increase*

Amount of Increase per Hour	Agreements		Workers Covered	
	Number	Per cent	Number	Per cent
No change**	28	3·1	25,541	8·0
0 – 4·9 cents	51	5·8	36,085	11·3
5 – 9·9 cents	154	17·5	71,370	22·3
10 – 14·9 cents	273	31·1	101,784	31·8
15 – 19·9 cents	217	24·7	51,745	16·2
20 – 24·9 cents	98	11·2	18,972	5·9
25 cents and over	58	6·6	14,192	4·5
Totals	879	100·0	319,689	100·0

*Deferred increases becoming effective during period not included.
**Includes one agreement covering six workers which resulted in a wage rate decrease of approximately 8 cents.

In two respects, the increases shown do not represent the total adjustments to wage rates. In the first place, a number of the agreements provided for deferred wage increases in addition to an increase at the time of signing. Of the 879 contracts analysed, 66 covering 47,000 workers made provision for additional increases at specified times during the life of the contract; in 34 of these, affecting 31,000 employees, such increases actually came into effect during the period under review. Account has not been taken of these deferred increases in Tables 1 to 4 but they are shown separately in Table 5.

A second type of wage adjustment not shown in the tables is that provided under cost-of-living "escalator" plans. About 15 per cent of the total agreements examined contained escalator clauses. These applied to almost one-quarter of the employees covered by all the contracts. Such workers may have received wage increases or decreases at different times during the period under review in accordance with fluctuations in the cost-of-living index. Periodic fluctuations in cost-of-living bonuses are not measured in this study, which deals only with changes in basic wage rates as set forth at the renewal of collective agreements.

In each of the first three quarters of the year, a wage advance of between 10 and 15 cents an hour was most frequent (Table 2). There are, however, some differences between quarters. During the third quarter, agreements providing wage increases of 15 cents or more were much less frequent than during the earlier part of the year. In terms of workers covered, an even more pronounced decline occurred in the proportion receiving increases of 15 cents or more. This suggests that there was a downward trend in the amounts of wage increases during the later months of the

TABLE 2.—WAGE CHANGES UNDER COLLECTIVE AGREEMENTS

First Three Quarters of 1952*

period. However, it should be borne in mind that the data are incomplete for the second and, more especially, the third quarters, and that a very few contracts, applying to large bargaining units of workers in which comparatively small wage settlements were obtained, tended to exert a strong downward influence in terms of workers covered during the later months.

Wage-rate increases bargained during the first three quarters of 1952 showed a similar trend to those bargained during the first three quarters of 1951 (Table 3). It will be noted, however, that, of the agreements received in the Department, a greater proportion provided increases of 15 cents and over in 1952 than in 1951. On the other hand, a smaller proportion of the workers covered received these larger increases in 1952 than in the previous year. Comparisons between the two years, however, should be made with caution in view of the incomplete nature of the data.

A breakdown of the 1952 figures by industrial groups (Table 4) shows considerable variation in the wage changes in these groups. It will be noted that increases tended to be higher in the construction, transportation and communication industries than in the manufacturing industries. In construction, increases in the 15-20-cent range were the most frequent, both in terms of numbers of agreements and numbers of workers covered.

On the other hand (*See* Table 5), most of the workers who received deferred wage increases were in manufacturing. Therefore, taking into account total raises during the nine months would improve the position of manufacturing relative to the other industries. Because the wage information used in this study was compiled by 5-cent ranges rather than by exact amounts, it has not been possible to combine the deferred-rate changes with the original increases in these agreements to get exact total increases during the period. Obviously, the addition of these deferred wage raises would tend to increase somewhat the proportions of contracts and workers to which the higher ranges apply while reducing the proportions in lower ranges.

Collective Agreements in the Canadian Manufacturing Industries

Department of Labour surveys 564 labour-management agreements all in effect in 1952, for frequency of appearance of certain items and the methods used to deal with certain subjects, such as union membership, check-off of union dues, length of work week, overtime and holidays

Variations in the contents and form of labour-management agreements are great, since such agreements reflect the results of bargaining carried on under widely differing circumstances. An analysis of the main characteristics of collective agreements, as shown in a sample of 564 of the more than 3,000 contracts in Canadian manufacturing industries at present on file, has been made by the Economics and Research Branch of the Department of Labour.*

The agreements examined, which were all in effect in 1952, were selected from all sections of the manufacturing industries. In selecting the sample, consideration was given to contracts signed by the various unions active in each industry; to geographical representation; and to the size of bargaining units. A distribution of the agreements analysed is shown by industry in Table I, by region in Table II, and by size of the bargaining unit in Table III.

Some of the agreements included in the survey are lengthy and complex; others are short and deal with only a few items; still others contain only statements of general policy. The omission of some items from an agreement does not necessarily mean, however, that the items do not apply to the workers covered. They may be in

*For more detailed analyses of certain subjects commonly included in collective agreements, *see* "Cost-of-Living Escalator Clauses", L.G., Dec. 1951, p. 1633; "Arbitration Provisions", L.G, March 1952, p. 289; "Termination Dates", L.G., April 1952, p. 442; and "Grievance Procedures", L.G., May 1952, p. 601.

Chemical products	16	6,100
Miscellaneous manufacturing	6	1,500
	564	343,100

effect as a result of legislative requirements, individual company policy, or generally accepted practices in the plant.

The frequency with which different items are found in the agreements is shown in Table IV. Some items, such as rest periods or apprenticeship plans, are found infrequently; others, such as wages, seniority, grievance procedures, hours of work and union security, are, as can be expected, regularly included.

The survey shows considerable uniformity in the manner of dealing with certain subjects. For example, the great majority of the clauses dealing with duration indicate that the agreement is to be in effect for a one-year period. Similarly, most agreements are renewed automatically for another year unless notice is given, either by labour or by management, of a desire to negotiate contract changes. Only in bargaining units of a thousand or more employees are agreements of more than one year's duration common.

For most of the workers in the sample, there is no provision in their agreements requiring **union membership** as a condition of employment. On the other hand, the largest number of workers under contracts which do have something to say on the subject are required only to keep up their membership, once having joined the union, on penalty of loss of employment, under a **maintenance of membership** clause.

It is the exceptional case where the worker is required to be a union member before he is hired, i.e., the closed shop. Although such a requirement appears in about one contract in eight, these contracts cover small groups of workers. But, when working on a good many jobs covered by **union shop** clauses in the contracts examined, the employee would need to join the union soon after securing employment. According to Table IV, five out of every ten workers under those agreements which deal with union membership would be in the first and most common position of maintenance of membership; four would be required to join the union shortly after securing employment under the terms of union shop or modified union shop agreements; and the remaining worker would have had to be a union member before he was taken into the closed shop, or at least as a union member he would receive preference in hiring.

Any workers wishing to join the union would be readily accepted according to a clause appearing in many of the contracts examined. This clause states that the union will accept employees into membership without **discrimination** of any kind. Most of the other contracts contain clauses designed to encourage union membership or facilitate the business of the union, which appear to pre-suppose the readiness of unions to accept new workers into membership.

The only item commonly found in the contracts examined which affects the workers' actual conditions of membership deals with the **check-off** of union dues. Eight workers out of every ten can have their union dues deducted from their pay and transferred to the union by their employers. For three of these eight workers, the plan is compulsory; but the majority, under a **voluntary check-off** clause, make their own decision on this matter.

Of the agreements examined which deal with the **work week,** a five-day week is the most common arrangement, affecting about half the workers covered by all agreements examined. One in every ten of the contracts makes no reference to the hours of work and an additional one in ten indicates hours which vary in different parts of the plant or according to the seasons of the year.

Variations in the number of hours worked appear to be related, in part at least, to the size of the bargaining unit.* Although a 40-hour week is common for the workers under the agreements, there is a tendency towards longer hours in bargaining units of

**See also* "Normal Work Week Analysed by Size of Establishment", L.G., Jan. 1953, p. 40.

Table II.—GEOGRAPHICAL DISTRIBUTION OF AGREEMENTS AND WORKERS COVERED BY THEM

	Agreements		Workers	
	Number	Per Cent	Number	Per Cent
Maritimes	38	7	15,500	5
Ontario	243	43	157,600	45
Quebec	151	26	101,400	30
Prairies	54	9	10,300	4
British Columbia	70	13	38,200	10
More than one province	8	2	20,100	6
	564	100	343,100	100

fewer than 1,000 employees as compared with those of larger size. Over two-thirds of the contracts affecting workers in groups of fewer than 1,000 indicate a longer work week, whereas close to half the contracts in the larger units provide for a 40-hour week. However, an interesting exception to the tendency towards longer hours in smaller bargaining units occurs in the case of very small groups of fewer than 100 workers, where more than one-third of the contracts provide a 40-hour week.

A worker employed **overtime** beyond his regular hours is usually paid at the rate of time and one-half. Only one worker out of every five under the contracts examined is treated otherwise, and he is most likely to be paid at the rate of time and a quarter. A negligible proportion of the contracts fail to provide for an overtime premium.

Although the rate of overtime payment is thus fairly uniform among the contracts examined, there is a basic difference in the possible methods of its computation. About half the contracts provide that overtime premium rates are payable for all hours worked beyond the daily schedule. The remainder provide for payment of overtime after weekly hours. In the latter case, however, calculation of overtime is usually permitted on a daily basis, if it benefits the employee. Fewer than 10 per cent of the agreements adhered strictly to the weekly criteria. Where mentioned in the contracts (in cases where the plant is on a five-day week), work on Saturday is also paid for at increased rates, usually time and a half. Sunday work, however, is more frequently the subject of contract clauses and payments are almost equally divided between double time and time and a half.

In addition to hours of work, most agreements examined have something to say on leisure time. This takes the form of clauses on **statutory holidays** and **vacations** with pay. Almost all the workers under the agreements examined received five or more statutory holidays in the year. In addition, in over 85 per cent of the cases, all or some of these holidays were paid for at the regular rates of pay. The employee called to work on a paid statutory holiday will most often be paid double time or double time and one-half. Annual vacations with pay vary from one to three weeks, depending on the length of service.

Almost all the agreements examined set forth the role **seniority** is to play in determining who is to receive available jobs. For 90 per cent of the workers, their position on a list of employees arranged according to length of service influences the likelihood of their being laid off, re-hired or promoted. The extent to which a worker's accumulated seniority may be balanced against his skill and ability is the subject of considerable variation, both in the wording of contract clauses and in their interpretation.* This is one of the more important problems in contract administration and frequently gives rise to the use of grievance procedures.

Practically all the agreements include grievance procedures. (*See* LABOUR GAZETTE, May 1952, p. 601.)

Seniority provisions vary also in terms of the units included. Some include all the workers in a company; others are department- or plant-wide. The most popular plan, in terms of workers covered, combines plant and departmental seniority. Some seniority lists also separate the men and the women at the plant.

Wage provisions are common to most of the agreements examined and 90 per

*An article on seniority clauses in collective agreements is in process of preparation and will appear in a forthcoming issue of the LABOUR GAZETTE.

Table III.—DISTRIBUTION OF AGREEMENTS BY SIZE OF BARGAINING UNIT COVERED

	Agreements		Workers	
	Number	Per Cent	Number	Per Cent
Under 100	162	29	8,300	3
100 and under 300	153	27	28,400	8
300 and under 500	92	16	33,800	10

5000 and over	12	2	90,500	27
	564	100	343,100	100

cent of them list the actual wage rates. These provisions take various forms, including any indication of a general wage change and a statement of the minimum wage. In Table IV, the only such clauses included are those indicating wage adjustments during the life of the agreements. Such clauses are included in only about one-quarter of the agreements but these are agreements for large bargaining units and cover almost half the workers in the sample. Formal plans linking wages to the cost of living or some other factor are the most popular feature, although almost as numerous are re-opening clauses which permit bargaining at some future date.

Many other types of clauses are included in the Canadian manufacturing agreements. Three per cent of the contracts have monthly or weekly wage guarantees; five per cent outline a bonus plan; 30 per cent have an apprenticeship plan. Many other types of clauses which appear in varying numbers of the agreements could be cited. The incidence of many such clauses is shown in Table IV.

Canadian Chamber of Commerce Presents Brief to Government

Urges increased immigration, with a population target for Canada of 30 million by 1975. Policy declarations and resolutions also deal with employer-employee relations, taxation, health services, housing

An immigration program calling for "more immigrants than are currently being admitted" and with a population target of 30 million by 1975 was urged by the Canadian Chamber of Commerce in a brief presented to the federal Cabinet January 20. The 1951 rate of immigration, the brief stated, would bring into Canada fewer than five million persons in 25 years and would not make it possible to reach the 30-million goal.

The Chamber called for a "more aggressive" program for the distribution of information in the countries from which it is desirable that future Canadian citizens should come.

"Deploring" the small percentage of immigrants from Great Britain and France, the Chamber requested the federal Government to put forth every effort to increase immigration from these countries.

The brief, presented by a delegation headed by the Chamber's President, Lewis W. Simms, of Saint John, N.B., contained policy declarations and resolutions approved by the Chamber at its annual meeting in October. Subjects dealt with included employer-employee relations, immigration, public finance and taxation, radio and television, St. Lawrence seaway and power project, voting procedures, aid to underdeveloped countries, decentralization of industry, health services and housing.

Employer-Employee Relations

Harmonious industrial relations are essential to the maintenance of a high standard of living, the Chamber re-stated. "In their turn, harmonious relations depend upon a more general recognition of the mutuality of interest of management, labour and capital, and between these three and the community they serve."

While legislation, the Chamber continued, cannot in itself ensure good relations, it can exert "a powerful influence, either for good or evil". It should recognize that "both employees and employers have responsibilities as well as rights and should maintain a just and

proper balance between the rights and responsibilities of employees on the one hand and those of employers on the other. Within this framework employers and employees should be left the maximum freedom to work out their common problems without government intervention."

Stating that the democratic liberties of the citizen must be protected at all times, the Chamber declared, "it is the right of every individual freely to elect and follow the vocation of his choice regardless of his membership or non-membership in a labour union or employees' organization."

In again voicing support of the principle of collective bargaining, the Chamber expressed the view that once an agreement is reached both parties should be equally responsible under the law for the faithful observance of its terms. Reiterating opposition to any legislation or provisions in collective agreements which, in effect, would enable employers or labour unions "to exercise a coercive monopoly" over either group or the public, the Chamber declared its opposition "therefore, to the principle of industry-wide bargaining."

While the legal requirements with respect to strikes are being carried out in large measure, the occasions where illegal strikes occur are too numerous, the Chamber stated. It deplored "violations of agreements through slow-downs and other obstructive tactics and the disregard of the law on the occasion of too frequent strikes and lockouts."

Management representatives—including foremen and supervisors—should be excluded from certified bargaining units, the Chamber stated; it proposed that a provision to this effect should be incorporated in any labour legislation.

Public Finance and Taxation

Recommendations on public finance and taxation included the following: government expenditures to be kept down to a minimum; appointment of a Royal Commission to study the economical and efficient administration of government departments; expansion of social security measures only as increase in the national wealth warrants; equal taxation of all business enterprises, whether corporation, co-operative privately-owned or publicly-owned; the retroactive principle in new taxation legislation to apply only when its effect is to lessen the burden of taxation.

Corporation taxes, repeal of the deferred depreciation provision, succession duties and municipal grants were also subjects of recommendations.

Health Services

The Chamber announced its intention to conduct a study, through its secretariat and member boards and chambers, of the need for a health service program and to determine its form, cost and the manner of its integration into the private enterprise system.

Housing

Stating that housing is still one of the problems of the expanding Canadian economy, the Chamber requested the federal Government to "liberalize the present restrictive forces in the making of loans to individual home builders and to take all possible steps in conjunction with private organizations to meet housing shortages wherever they exist."

Radio and Television

The Chamber proposed the establishment of an independent body with minimum essential regulatory powers over radio and television.

It also restated the belief "that the development of television in Canada should not be confined to any governmental agency or corporation but should be developed as freely and rapidly as possible by private capital as well, consistent with such technical limitations as may exist."

Voting Procedures

The single alternative vote, the Canadian Chamber believes, is "the method best suited to bring about the election of the most acceptable candidates." The Chamber's brief requested an amendment to the Dominion Elections Act to provide for this method. This method of voting, the Chamber explained, would permit a voter to indicate on the ballot paper first, second and subsequent choices. Votes of the candidates receiving the fewest would be distributed among the other candidates up to the point where one candidate would have an absolute majority of the votes cast.

Other Resolutions

Aid to Under-developed Countries

A resolution urged the federal Government to take steps to make more widely known to the Canadian people the nature and objectives of Canada's participation in the United Nations and Colombo Plans for giving technical aid to under-developed nations and "to stress the importance of an adequate Canadian share in such measures as an integral part of the defence or extension of democratic values."

St. Lawrence Seaway

Commending the federal Government on its decision to proceed with the construction of the St. Lawrence seaway and power project, the Chamber urged that it be proceeded with as early as possible. It also voiced support of the principle of a toll levy on all shipping using the seaway.

Public Holidays

The proposal to hold federal statutory holidays on the nearest Monday finds favour with the Chamber. A resolution expressing approval of the principle excepted Christmas Day, New Year's Day, Good Friday and Dominion Day.

Employment of Physically-Handicapped

The Chamber urges employers to co-operate as far as their conditions permit in the placement in suitable jobs of physically-handicapped workers.

National Film Board

National Film Board operations should not extend into fields adequately served by private enterprise, the Chamber stated. It recommended amending the Film Act to make it no longer necessary for federal Government departments to secure their films through the National Film Board.

International Convention on Fisheries

Ratification of the International Convention for the High Seas Fisheries of the North Pacific Ocean at the earliest possible opportunity was urged.

Decentralization of Industry

Recording approval of the policy of decentralization of industry, the Chamber recommended the placing of defence orders by the federal Government geographically, as far as possible, for security reasons.

Results of Survey of Working Conditions of Young Workers in Quebec are Published

Investigation made by *Jeunesse Ouvrière Catholique* into the academic standing, occupations, wages, hours and other working conditions of 925 young workers in some 100 working-class parishes in the province

The report of a comprehensive investigation during 1950 and 1951 by the *Jeunesse Ouvrière Catholique* (Young Catholic Workers) among 925 young workers in some 100 working-class parishes in Quebec province has been published by *L'Action catholique ouvrière* (Catholic Labour Action).* The academic standing, occupations, safety and working conditions of the young workers was surveyed.

Almost half (45·6 per cent) of them, the inquiry showed, had left school before reaching Grade VIII, 43·4 per cent had no trade, 30 per cent considered their work dangerous, 77·7 per cent had had no medical examination before being hired and almost 20 per cent received no annual vacations. Their average weekly wage was $28.36 and their average work week 49·4 hours.

The average age of the young workers questioned was almost 20 years—19.92. Replies were received from 37 youths under 16 years, from 81 aged 16, 129 aged 17, 139 aged 18, 141 aged 19, 96 aged 20, 98 aged 21, 60 aged 22, 53 aged 23, 35 aged 24 and 56 aged 25 years.

In addition, the replies also varied according to the father's profession and the occupations of the young workers themselves. The great majority—75 per cent of the young workers questioned—came from working-class families. As for their occupations, 19·1 per cent were labourers, 24·3 per cent worked in factories, 14·9 per cent had a specialized trade, 17·1 per cent were apprentices, 12·4 per cent were doing general office work, 6·9 per cent were engaged in selling, business, trade or insurance, 1·9 per cent were in business on their own account and 3·4 per cent held other jobs.

According to the investigation, the average age at which the youths started to work was 16·24 years. A 1947 inquiry gave this figure as 15·82. Of 821 young workers who answered the question, 416 (50·6 per cent) started to work at the age of 15 or under, 70·1 per cent at 16 or under.

*Inquiry into the Professional Lives of Young Workers in the province of Quebec, *L'Action catholique ouvrière*, Montreal, Vol. II, No. 9, October 1952.

The young workers were asked five questions with a view to obtaining an accurate idea of their academic standing. Out of 909 young workers who answered, 904 said that they had attended primary schools. Of these 904, 159 had attended high schools, 61 a classical college, 160 other schools and 220 were taking courses in other schools.

Moreover, out of 816 young workers questioned, 22 did not go beyond Grade IV, 44 beyond Grade V, 102 beyond Grade VI, 204 beyond Grade VII, 124 beyond Grade VIII and 320 beyond Grade IX. Of those who attended secondary schools, 74 did not go beyond Grade X, 47 beyond Grade XI and 32 beyond Grade XII. In short, only 23·2 per cent went beyond the primary education stage.

At the time of the 1947 inquiry, 52 per cent of those without trades said that they had been unable to learn a trade because their family responsibilities had prevented them from doing so, while the percentage was 64 per cent for young workers as a whole. In 1952, 60 per cent of all the young workers indicated directly that the financial situation of their families made the problem complicated for them.

The 1950 and 1951 surveys also showed that only 11·1 per cent of the young workers had been given vocational guidance by a professional guidance officer. The results of this are apparent in the fact that 35 out of 127 apprentices questioned said that they would rather be in another trade. The trades which the apprentices consider the most desirable, according to the investigation, are those of mechanic and electrician, which happen to be two of the most overcrowded trades at present.

Two hundred and eighty-two young workers serving their apprenticeship or who had already specialized in a trade replied to the *JOC* questionnaire; they were distributed among 60 different trades but more than half of them were engaged in five basic trades as follows: 47 joiners, 33 electricians, 25 machinists, 24 plumbers and 14 mechanics. Likewise, 75·7 per cent of the young workers who had specialized in a trade had done so in trades which, though attractive, are already congested. Only five per cent of this group had benefited by vocational guidance.

The inquiry with regard to "tradeless" workers showed that 60 per cent of the young workers who had no trade left school through economic necessity and 39 per cent because they did not like it. In this same group, 83·3 per cent said that they would like to learn a trade. Moreover, exactly a third do not like the work they are doing at present.

Only 9·4 per cent of the young workers questioned in 1950 and 1951 had learned their trades at an apprenticeship centre, whereas 25·2 per cent had attended an arts and crafts school; 63 per cent had learned their trades on the job or with skilled workers.

The 1947 investigation established the need for an average weekly minimum income of $28.80 for young workers in the province of Quebec. At that time, according to the data obtained in the same investigation, the young workers' average wages was $25.50. The average wage of the 832 young workers who disclosed their weekly earnings at the time of the 1950 and 1951 investigation was $28.36. During these years the cost-of-living index went up 22 per cent from 125 to 165, and the young workers' average income by only 6·7 per cent. To keep pace with the 22 per-cent rise in the cost-of-living index, the necessary weekly minimum income should have risen to $35.15.

International Labour Organization

120th Session of ILO Governing Body

June 2, 1954, named as opening date for 37th session of International Labour Conference. Among items on agenda will be holidays with pay, vocational rehabilitation of the disabled and technical assistance

The 120th Session of the ILO Governing Body was held in Geneva, Switzerland, from November 14 to December 2, 1952. Various committees met before and after the session.

Arthur Brown, Assistant Deputy Minister of Labour for Canada, substituted for Dr. Arthur MacNamara, Deputy Minister of Labour, the Canadian Member of the Governing Body. He was assisted by Paul Goulet, Assistant to the Deputy Minister and Director of the ILO Branch of the Department of Labour, and by Bruce Williams and Kenneth McIlwraith of the Canadian Permanent Delegation at Geneva.

The Governing Body decided that the 37th Annual ILO Conference would open in Geneva on June 2, 1954; among the items included on the agenda are holidays with pay, vocational rehabilitation of the disabled and technical assistance.

The Permanent Agricultural Committee was reorganized and the agenda was decided for its 4th Session at Geneva in May 1953; Canada was appointed as a substitute Governing Body representative at this meeting. Approval was given to a meeting of experts to make a study of systems of payment by results in the construction industry, to be held in Geneva next July. The next Asian Regional Conference will be held in Tokyo, Japan, in September 1953. The 8th International Conference of Labour Statisticians will convene in Geneva early in 1954.

Pierre Waline of France was elected a Vice-Chairman of the Governing Body representing the employers' group to replace the late Sir John Forbes-Watson of the United Kingdom. Dr. K. C. Charron, Chief of the Industrial Health Division, Department of National Health and Welfare, was appointed to the ILO Correspondence Committee on Occupational Safety and Health for a three-year term.

The Director-General was authorized to consult member governments on whether they feel that there is a need for the establishment of international standards governing the accommodation and welfare of migrants on board ship.

It was decided to submit to the 36th Annual Conference for discussion an amendment to the ILO Constitution which would increase the membership of the Governing Body from 32 to 40. The number of member states has risen from 43 in 1919 to 66 at present, while the Governing Body membership has been fixed at 32 since 1934.

The Governing Body also discussed general financial and administrative questions and the work of Industrial, Manpower and Employment, Technical Assistance, and International Organizations Committees.

The 121st Session of the Governing Body and its committees will meet in Geneva from February 20 to March 7, 1953, at which time the ILO Budget for 1954 will be studied.

Fourth Session of Petroleum Committee

Resolutions adopted relating to minimum wages and social services in the petroleum industry. Canada was one of the 14 nations represented

Resolutions relating to minimum wages and social services in the petroleum industry, hours of work, conditions of employment of contract labour, human relations, and the use of visual aids for training and instructional purposes were adopted at the fourth meeting of the ILO Petroleum Committee* in The Hague, October 14-25, 1952.

*Industrial Committees were inaugurated in 1945 by the ILO Governing Body to deal with problems of some of the most important international industries.

Fourteen oil-producing and oil-refining countries sent tripartite delegations to the meeting. They were: Argentina, Burma, Canada, Colombia, Egypt, France, Iran, Iraq, Mexico, The Netherlands, Peru, United Kingdom, United States and Venezuela. Observers representing the International Organization of Employers, the International Confederation of Free Trade Unions, the International Confederation of Christian Factory and Transport Workers, and the governments of Indonesia and Japan were also present.

Canadian Delegation

The Canadian delegation was as follows:

Government Delegates: Bernard Wilson, Industrial Relations Branch, Department of Labour, Ottawa; and R. H. Hooper, Industrial Relations Officer, Department of Labour, Winnipeg.

Employers' Delegates: R. F. Hinton, Personnel Manager, Shell Oil Company of Canada Limited, Toronto; and A. C. Harrop, Manager of Employment Relations, Imperial Oil Company Limited, Toronto.

Workers' Delegates: John W. Bruce, General Organizer, United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada (AFL-TLC), Richmond Hill, Ont.; and R. G. Geddes, International Representative, Oil Workers' International Union (CIO-CCL), Toronto.

Plenary Sessions

The plenary sessions were mainly devoted to matters arising out of the General Report, prepared in three parts by the ILO and distributed to the member nations prior to the conference. The report dealt with action taken in the various countries in the light of the conclusions of the previous sessions, steps taken by the ILO to follow up the studies and enquiries proposed by the Committee, and recent events and developments in the petroleum industry.

Also discussed were the principles and methods used in determining wages in the petroleum industry and social services, with special reference to supply schemes, transport of workers, recreation facilities and co-operative societies.

An Iranian delegate, Kazen Hassibi, a member of the Iranian Parliament, said that in connection with the nationalization of the oil industry in his country, the International Court of Justice had recognized the righteousness of the Iranian cause by refusing to deal with the dispute. He also charged ill-treatment of refinery workers by the Anglo-Iranian Oil Company.

Strong exception to this was taken by Mr. Hooper, Canadian government delegate, on the ground it was political propaganda. He pointed out that the International Court had stated it had no jurisdiction to deal with the oil dispute because only one party, the British Government, had requested action. The Court's refusal to act on the request of one party only in no way reflected on the merits of the dispute itself, he said. Furthermore, the charges of ill-treatment of workers were not supported by the report of the ILO Mission sent to Iran in 1950 and presented to the third session of the Committee the same year (L.G., Feb. 1951, p. 176), Mr. Hooper pointed out.

Copies of a "Vocabulary of Terms Used in the Petroleum Industry" in both English and French, with indexes, were distributed to the delegates. It was prepared by the ILO in accordance with a resolution passed at the second session of the Committee.

Committees and Subcommittees

A steering committee was appointed upon which Canada was represented by Mr. Hooper and Mr. Geddes. This committee set up two subcommittees to deal with wage determination and social services.

A resolution adopted by the subcommittee on wage determination invites the Govering Body of the ILO to request member governments to make arrangements, where responsible and effective collective bargaining machinery does not exist, for the establishment of minimum wages, either on the basis recommended in Convention No. 26 concerning the creation of wage-fixing machinery or by such other method as may be appropriate to the circumstances of the country. The vote was 71 for, none against, with no abstentions.

The resolution was later passed by the Petroleum Committee in plenary session.

The subcommittee drew attention to the following principles: encouragement should be given to the development of free trade unions which would enable wages to be determined by voluntary and responsible collective bargaining; minimum wage rates should provide for a decent and dignified standard of living for the workers; and the skill and responsibility required by each job are the main factors to be taken into consideration for determining differentials in rates of pay for different jobs.

The subcommittee on wage determination was under the chairmanship of J. G. Stewart CBE (United Kingdom Government). Canada was represented by Mr. Wilson, Mr. Hinton and Mr. Geddes.

The subcommittee on social services named a working committee composed of three members from each of the three groups. The working committee merged into a single text all the numerous proposals submitted on social services in the petroleum industry. This was passed by the subcommittee, after some objections by the employers' representatives, as a memorandum recommending canteens, supply schemes for workers and their families, transport facilities, hygienic amenities, cultural and recreational facilities, and co-operative societies in oilfields and refineries where these services do not exist or are not already provided. The memorandum was adopted by the Petroleum Committee in plenary session by a vote of 69 for, none against, and with no abstentions.

The Committee observed that the importance of social services for the workers in the petroleum industry has been generally recognized. It believed that such services should be absorbed into the normal life of the community of which the industry is a part.

During the discussion it was pointed out by some government members that the provision of social services was of special importance in the underdeveloped regions where the responsibility for their establishment and maintenance often rested largely with the petroleum companies.

The employers' members stressed the distinction between underdeveloped and fully developed regions. Pointing out that in the underdeveloped areas, establishment and maintenance of social services had been carried out by the petroleum industry, they stated that in developed areas, where social services for the whole community were mainly provided by the state and other bodies, responsibility assumed different aspects and proportions. Excessive paternalism practiced by the companies might lead, they observed, to a complete dependence of the workers on the company and thus prevent workers from showing initiative in managing their affairs.

The workers' members emphasized that their objective was the establishment and maintenance of social services in areas in which such services were either nonexistent or inadequate. This did not, however, preclude efforts to improve or even establish, where necessary, social services in developed areas.

The subcommittee on social services was headed by Alba Cejudo, government member of Mexico, with Mr. Hooper, Canadian government member as reporter. Other Canadian members were Mr. Harrop and Mr. Bruce.

Other Resolutions

Other resolutions approved by the Committee were as follows:—

(1) A resolution, submitted by the workers' group, inviting the International Labour Office to make a further study of the subject of industrial relations in the petroleum industry, particularly in economically underdeveloped areas, having regard to the views expressed by the Petroleum Committee at its second session in 1948. This was passed unanimously.

(2) A resolution, submitted by the steering committee, asking the Office to arrange for the inclusion in the agenda for future sessions the matters of human relations in the petroleum industry and the use of visual aids for training and instructional purposes. This was adopted unanimously.

(3) A resolution, submitted by the steering committee, asking the Office to make a study of the conditions of employment of contract labour, i.e., workers employed by persons such as contractors and subcontractors who perform work under contract for oil companies on an extensive or long-term basis. This was adopted unanimously.

(4) A resolution, submitted by the workers' group, requesting that the Office place the subject of reduction of hours of work on the agenda of the fifth session of the Petroleum Committee. The employers' group objected to having the matter placed on the agenda of the fifth session, whereupon the workers' group agreed to have it brought up at a future session. This resolution was adopted by a vote of 36 for, 25 against, and three abstentions. The Canadian government delegates voted for the resolution.

Action on Previous Resolutions

The workers' group made a formal complaint that some governments had apparently taken no action on many resolutions passed at previous sessions of the Committee. Maintaining that all resolutions should be closely followed up by the ILO, it suggested that some form of punitive measure be taken against governments which had done nothing to implement the Committee's resolutions. The government and employer groups, however, were opposed to any idea of punitive measures.

A working party was appointed by the Committee to examine the action taken. It was composed of 12 members, four

from each of the government, employer and worker groups. After four sittings, it recommended that governments should supply any useful information on developments in their respective countries with regard to previously adopted resolutions as well as those of the fourth session. This recommendation was adopted by a vote of 78 for, none against, and with no abstentions.

Other Activities

During the session the Committee visited the Bataafsche Petroluem Maatschappij (Royal Dutch Shell Group) refinery at Rotterdam-Pernis, the largest refinery in Europe, employing about 3,500 workers, and the Royal Dutch Shell Laboratory at Amsterdam, one of the largest industrial research organizations in the world, employing some 40 expert technicians and several hundred other workers.

The Petroleum Committee held 11 plenary sittings.

The Chairman of the fourth session was Dr. V. Montoya, Permanent Delegate for Venezuela to the United Nations at Geneva and a member of the Governing Body of the ILO.

The Committee was officially welcomed by Dr. van Rhijn, Netherlands Secretary of State for Social Welfare.

ILO Studies Problems of Women Textile Workers

In most of the textile producing countries the largest number of women working in manufacturing are employed in the textile industry. Exceptions include Canada and the United States; in these countries the proportion is relatively small.

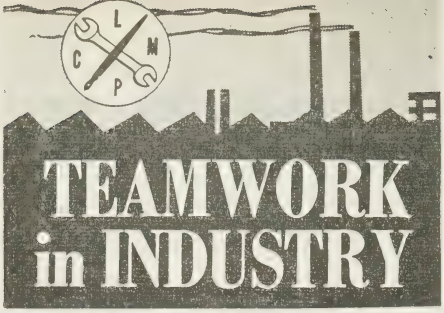
Female labour, according to an ILO report, loses its dominant position in countries in which equipment is being extensively modernized or where the industry is new.

The report, prepared for the worker, employer and government delegates from 23 leading textile-producing countries to the fourth session of the ILO Textile Committee, meeting in Geneva this month, discusses problems connected with the employment of women in the textile industry.

The Canadian Government is being represented by two officers of the Unemployment Insurance Commission: S. H. McLaren, Executive Director, and Miss Ruth A. Hamilton, Adviser on Women's Employment. Miss Hamilton has had first-hand experience in various fields connected with the textile industry, which experience particularly fits her to serve as a delegate of the Canadian Government at this conference.

Although the margin has narrowed since the war, the average hourly earnings of women workers in the industry, it is noted in the report, are substantially lower than those of men. A recent ILO study, says the report, showed that in 13 out of 16 countries, in 1948 and 1949, they were 20 to 40 per cent lower.

Unemployment, generally, is relatively more widespread among women textile workers than among men. In June 1952, in Federal Germany the percentage of unemployed in the industry was 75, while in France it was 85. In Italy, in March of the same year, the percentage was 87.



The report, in examining problems of recruitment, training, promotion and wages makes the following points:—

The occupational distribution of women workers in the textile industry needs to be reviewed in many countries to ensure the most effective utilization of the labour force.

The removal of artificial barriers between the field of men's employment and that of women would be conductive to greater efficiency.

To ensure equivalent working conditions, attention should be given to improving such aspects as welfare provisions and maternity protection, as well as certain conditions outside employment, such as social services, crèches and nursery schools, to alleviate the daily difficulties with which many women are faced.

The United Automobile Workers (CIO-CCL) has reported that 600 Canadian members have retired on pension since the union signed its first pension agreement in 1950. Of the 600 pensioners, 425 had been employed at Ford, most of the remainder at General Motors.

LMPC is Answer to Hydro's Problems

When it is completed sometime in 1955, the Sir Adam Beck Generating Station No. 2 at Niagara Falls will produce 1,200,000 horsepower for the wheels of Canadian industry. Officials of the Ontario Hydro Electric Power Commission are relying heavily on a high level of good labour-management relations and co-operative spirit to ensure completion of the work on schedule.

In the opinion of top Hydro officials, this co-operation is necessary at every level of the undertaking from the apprentice to the project manager. Recognizing this need, the Commission and the allied council of AFL international unions agreed just over one year ago to establish a completely integrated system of labour-management production committees.

Basic to management-union thinking in this respect is the belief that good industrial relations and the highest possible development of labour-management communication are absolute necessities. In LMPCs the Hydro officials feel they have the answer to this problem.

Seven Divisional Committees

Of the 5,500 workers currently engaged on the project, some 3,000 are employees of the HEPC. The others are working for the various contractors on the job. The LMPC system (which presently covers Hydro employees only) consists of seven divisional committees—representing the main work-sections of the project—and a central committee which passes on all suggestions and policy matters referred to it by the divisional committees.

One of the reasons for the success of labour-management co-operation at Niagara is the co-operative attitude of senior management officials. Both Project Manager Gordon Mitchell and Personnel Superintendent W. H. Barnes are enthusiastic about the successful way LMPCs have functioned.

In addition to presiding over the central committee, Mr. Mitchell takes a personal interest in what goes on at divisional LMPC meetings and follows their activities regularly. He has made it a policy to have prompt and appropriate action taken on all recommendations. Acceptable suggestions are put into force and, when this cannot be done, the committee concerned is advised at once and given the reasons. In one period recently, Mr. Mitchell personally issued nine separate directives implementing suggestions forwarded through the different committees.

To ensure that all matters are handled promptly, the central committee comprises the project manager, the general superintendent and his assistant, all divisional superintendents and the personnel superintendent. Labour is represented by one employee from each divisional LMPC. In addition, the committee is able to obtain technical and other advice from the whole supervisory and work force. When items affecting specific departments or sections of the project are on the agenda, appropriate advisers attend the meeting. Since the highest level of management is represented in the committee, decisions are immediate on all matters to be handled. In matters of urgency the project manager can take action immediately after the minutes of the committee are brought to his attention.

LMPC Averts Lack of Employment

In a recent statement to its LMPC, the management of a West Coast firm said that one of the indirect results of its discussions was work for all concerned. While it was not possible to say how these discussions directly affected the employment situation, it was intimated that by mutual discussions many problems which could have resulted in lack of work were averted.

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service. Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during December. The Board issued four certificates designating bargaining agents, ordered two representation votes and rejected five applications for certification. During the month the Board received seven applications for certification and one application for revocation of certification.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

Applications for Certification Granted

1. Canadian Merchant Service Guild, Inc., on behalf of a unit of deck officers employed aboard the M/V *Abegweit* and the SS *Prince Edward Island* operated by the Canadian National Railways on its Cape Tormentine-Port Borden Ferry Service (L.G., July, 1952, p. 914).

2. Marine Checkers and Weighers Association (Local 506, International Longshoremen's and Warehousemen's Union) on behalf of a unit of checkers employed by Union Steamships Limited at its docks and shed, foot of Carrall Street, Vancouver, B.C. (L.G., Dec., 1952, p. 1583).

3. Canadian Brotherhood of Railway Employees and Other Transport Workers on behalf of a unit of statistical clerks and comptometer operators employed by Canadian National Railways in its Bureau of Statistics, Moncton, N.B. (L.G., Dec., 1952, p. 1583).

4. Maintenance Workers Federal Union No. 493 on behalf of a unit of employees of the British Columbia Steamship Service, Canadian Pacific Railway Company, Victoria, B.C. (L.G., Jan., p. 53).

Representation Votes Ordered

The Board ordered representation votes of employees in the following applications for certification:—

1. National Association of Broadcast Engineers and Technicians, applicant, and Canadian Broadcasting Corporation, respondent (L.G., Oct., 1952, p. 1351).

2. National Association of Marine Engineers of Canada, Inc., applicant, and Canadian National Railways, respondent (Cape Tormentine-Port Borden Ferry Service) (Marine Engineers) (L.G., Nov., 1952, p. 1466).

Applications for Certification Rejected

1. Grand International Brotherhood of Locomotive Engineers on behalf of a unit of locomotive engineers employed by Shawinigan Falls Terminal Railway (L.G., Nov., 1952, p. 1465). The application was rejected for the reason that it was not supported by a majority of the locomotive engineers involved therein.

2. Grand International Brotherhood of Locomotive Engineers on behalf of a unit of helpers on locomotives employed by Shawinigan Falls Terminal Railway (L.G., Nov., 1952, p. 1465). The application was rejected for the reason that it was not supported by a majority of the helpers on locomotives involved therein.

3. National Association of Marine Engineers of Canada Inc. on behalf of a unit of marine electrical engineers employed by Canadian National Railways (Cape Tormentine-Port Borden Ferry Service) (L.G., Nov., 1952, p. 1466). The application was rejected for the reason that the bargaining unit described therein was not considered appropriate for collective bargaining.

4. National Association of Marine Engineers of Canada Inc. on behalf of a unit of chief engineers and junior chief engineers employed by Canadian National Railways (Cape Tormentine-Port Borden Ferry Service) (L.G., Nov., 1952, p. 1467). The application was rejected for the reason that the chief engineers and junior chief engineers involved therein were not employees within the meaning of the Industrial Relations and Disputes Investigation Act.

5. National Association of Marine Engineers of Canada Inc. on behalf of a unit of chief marine electrical engineers employed by Canadian National Railways (Cape Tormentine-Port Borden Ferry Ser-

vice) (L.G., Nov., 1952, p. 1467). The application was rejected for the reason that the employees involved therein were not employees within the meaning of the Industrial Relations and Disputes Investigation Act.

Applications for Certification Received

1. Local 38/163, International Longshoremen's Association on behalf of a unit of employees of Northland Navigation Co. Ltd., Vancouver, B.C. (Investigating Officer: G. R. Currie).

2. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel employed by Dola Towing Co. Ltd., Vancouver (Investigating Officer: D. S. Tysoe).

3. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel employed by Coastal Towing Co. Ltd., Vancouver (Investigating Officer: D. S. Tysoe).

4. Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Carwil Transport Limited, Toronto (Investigating Officer: R. Trépanier).

5. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel employed by Dolmage Towing Co. Ltd., Vancouver (Investigating Officer: D. S. Tysoe).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certifications given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; three officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

6. Association of Radio and Television Employees of Canada on behalf of a unit of program, administration and certain technical personnel employed by Canadian Broadcasting Corporation (Investigating Officer: L. Pepin).

7. International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada on behalf of a unit of production employees of the Canadian Broadcasting Corporation (Investigating Officer: F. J. Ainsborough).

Application for Revocation of Certification

1. Forbes Rhude, applicant, American Newspaper Guild, respondent, and the Canadian Press, respondent.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During December the Minister appointed Conciliation Officers to deal with the following disputes:—

1. Vancouver Barge Transportation Limited and National Association of Marine Engineers of Canada, Inc. (Conciliation Officer: G. R. Currie).

2. Robin Hood Flour Mills Limited, Saskatoon, and Flour & Cereal Workers Division of the United Packinghouse Workers of America, Local 342 (Conciliation Officer: R. H. Hooper).

3. Vancouver Barge Transportation Limited and Canadian Merchant Service Guild, Inc. (Conciliation Officer: G. R. Currie).

4. Ottawa Transportation Commission and Division No. 279 of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (Conciliation Officer: Bernard Wilson).

Settlements Reported by Conciliation Officers

1. Patricia Transportation Co. Ltd., Winnipeg, and Canadian Brotherhood of Railway Employees and Other Transport Workers (Conciliation Officer: J. S. Gunn) (L.G., Nov., 1952, p. 1467).

2. Midland Railway Company of Manitoba and Order of Railway Conductors of America (Conciliation Officer: J. S. Gunn) (L.G., Jan., 1953, p. 54).

3. Union Steamships Limited, Vancouver, and Canadian Communications Association (Conciliation Officer: G. R. Currie) (L.G., Jan., 1953, p. 54).

Conciliation Board Appointed

During the month the Minister established a Board of Conciliation and Investigation to deal with matters in dispute between the Queen Charlotte Airlines Ltd. and Canadian Air Line Pilots Association. The Board was established following receipt by the Minister of the report of G. R. Currie, previously appointed conciliation officer (L.G., Dec., 1952, p. 1584). (The Board had not been fully constituted at the end of the month.)

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in October to deal with matters in dispute between the Gatineau Bus Company Limited, Hull, P.Q., and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 591 (L.G., Dec., 1952, p. 1585) was fully constituted in December with the appointment of Mr. Justice Edouard Tellier, Montreal, as Chairman. Mr. Justice Tellier was appointed by the Minister in the absence of a joint recommendation from the other two members, Wilbrod Bherer, Quebec, and C. L. Dubin, QC, Toronto, previously appointed on the nominations of the company and the union respectively.

2. The Board of Conciliation and Investigation established in November to deal with matters in dispute between the Searle Grain Co. Ltd., Pacific Elevators Ltd., United Grain Growers Ltd., Kerr Gifford & Co. Inc., Alberta Wheat Pool, all of Vancouver, and the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America was fully constituted in December with the appointment of Dr. Joseph A. Crumb, Vancouver, as Chairman. Dr. Crumb was appointed by the Minister in the absence of a joint recommendation from the other two members, Thomas E. H. Ellis and James Bury, both of Vancouver, previously appointed on the nominations of the companies and the union respectively.

Conciliation Board Reports Received

During December the Minister received the following reports of Boards of Conciliation and Investigation: —

1. Canadian Pacific Railway Company (dining, cafe and buffet car employees) and the Brotherhood of Railroad Trainmen (L.G., Aug., 1952, p. 1077). Text of the Board's report is reproduced below.

2. Canadian Pacific Railway Company and Brotherhood of Railroad Trainmen (L.G., Aug., 1952, p. 1077). Text of the Board's report is reproduced below.

3. Canadian National Railways and Brotherhood of Railroad Trainmen (L.G., July, 1952, p. 915). Text of the Board's report is reproduced below.

Settlement Following Board Procedure

During December the Minister was advised that a settlement had been reached by the parties concerned through further direct negotiations following receipt of the report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Canadian National Railways, Canadian Pacific Railway Company, Toronto, Hamilton and Buffalo Railway Company, and Ontario Northland Railway and various railway labour organizations acting through a joint negotiating committee representing, mainly, non-operating employees of the companies (L.G., Jan., 1953, p. 54).

Report of Board in Dispute between

Canadian Pacific Railway Company (dining, cafe and buffet car employees)
and
Brotherhood of Railroad Trainmen

To:
The Hon. Milton F. Gregg, VC,
Minister of Labour,
Ottawa, Ont.

In the matter of the Industrial Relations and Disputes Investigation Act and dispute affecting Brotherhood of Railroad Trainmen and Canadian Pacific Railway Company (Dining, Cafe and Buffet Car Employees).

Dear Mr. Minister:

On the 3rd of October 1952, you were pleased to appoint a Conciliation Board to investigate the above dispute, constituted as follows:—

James H. Stitt, Barrister, of Ottawa, Ontario, Chairman.
C. W. Rayfield, Esquire,
3410 Atwater Ave.,
Montreal, Que., as Company Nominee.
and
W. G. Currie, QC,
407 Kerr Building,
Regina, Sask., as Union Nominee.

Hearings in the above dispute were instituted originally on September 30 of this year under the Chairmanship of H. Carl Goldenberg, QC, and continued through October 1 and October 2, when Mr. Goldenberg resigned because of the pressure of official business in which he was already engaged by the Department of Justice. The hearings of the dispute continued under the new Chairman through October and November, when the final meeting was held on the 26th of that month. The dispute covered the existing contract, dated April 29, 1951, between the Canadian Pacific Railway Company and the dining car employees, and included

On December 19, 1952, the Minister of Labour received the majority and minority reports of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Canadian Pacific Railway Company (dining, cafe and buffet car employees) and the Brotherhood of Railroad Trainmen.

The Board was under the Chairmanship of James H. Stitt, Ottawa. The nominee of the company was C. W. Rayfield, Montreal; the union nominee, W. G. Currie, QC, Regina.

The majority report, which under the provisions of the Industrial Relations and Disputes Investigation Act constitutes the report of the Board, was signed by the Chairman and Mr. Currie. The minority report was submitted by Mr. Rayfield.

The texts of the majority and minority reports are attached hereto.

suggestions for changes in practically all the working rules constituting that agreement.

The Company was represented by the following:—

T. P. James, Assistant Manager, S.D. & P.C. Dept.
I. J. McNaughton, Assistant Manager, Dept. of Personnel.
J. A. Brown, General Superintendent, Eastern Region, S.D. & P.C. Dept.
J. W. Moffatt, Assistant Superintendent, S.D. & P.C. Dept.
N. H. Chalmers, Assistant Superintendent, S. D. & P. C. Dept.
P. E. Barnard, Cost Supervisor, S. D. & P. C. Dept.

The Employees were represented by the following:—

L. C. Malone, Vice-President, Brotherhood of Railroad Trainmen.
Cecil Burningham, General Chairman, Dining, Cafe and Buffet Car Employees.
E. Charron, Vice-Chairman, General Committee.
J. R. Armitage Jr., Secretary, General Committee.
L. Roback, Economist.

and extensive briefs were submitted by both parties for the consideration of your Board. At one stage during the negotiations, the Company proposed that if the employees would accept an increase of 11 per cent in pay and abandon their proposals to change the rules, that the same would be granted. This was refused by the employees, however, as they stated that they were more interested in working conditions, and the features for amendment which they emphasized were the following:—

1. Promotion Districts.
2. Standard Rates of Pay.
3. Scope Rule.
4. Penalty Overtime.
5. Rest Periods.
6. Vacations.

Scope Rule

During the course of the hearing, lengthy representations were made by the employees as to the desirability and necessity of what is known as a "Scope Rule".

In these days of changes in style and the application of science to industry, the employees were naturally concerned for their future, and in the evidence before the Board, they attempted to define Dining Car Service Employees in such a precise and rigid way as to prevent innovation and to restrict Management in its right to change either the service personnel or the type of cars to be utilized.

The idea of a "Scope Rule" is not new. It has come before Conciliation Boards in the United States, and only last year an Emergency Board in its report to the President, which dealt with a dispute between the Carriers and Dining Car Service Employees in that country, found it impossible to draft a satisfactory "Scope Rule" which could be recommended for adoption.

This Board has laboured hard to formulate a "Scope Rule", and after lengthy consideration, finds that it is a matter in which it can make no definite recommendations.

While the Board realizes that it is only natural for the employees to be concerned about their future, it hestitates to restrict the function of Management by any such rule, and although it is apparent that changes must occur not only in the personnel but the facilities utilized, it considers that these are matters which should be best left to the consideration of the parties themselves, it recognizes that if a proper spirit is brought to bear on such issues, that Management will not be unduly restricted, and at the same time the employees' rights to security of position and seniority will be given sympathetic consideration.

Graduated Rates

In the present agreement between the parties, different rates of pay are specified for the Dining Car Steward, Cafe Car Steward, Buffet Car Steward and the Dining Car Chef and Cafe Car Chef. These differential rates are of long standing and have been recognized over the years.

Where the function of a man's occupation is to produce a greater amount of service and to have jurisdiction over a larger number of subordinates, it is surely a proper criterion for a higher rate to be paid than where the service produced is less and the number of subordinates under him is fewer.

The Board therefore believes it illogical to grant the Dining Car Steward's rate of pay to both Buffet and Cafe Car Stewards and it also considers it illogical to grant the same rate of pay to Dining Car Chefs, Cafe Car Chefs and Buffet Car Chefs. The Dining Car Steward has under his supervision a crew of 10, the Cafe Car Steward has under his supervision a crew of not

more than 4, while the Buffet Car Steward has at most only 2 under his supervision. The Board therefore recommends that the differential rates of pay between these classes of employees should stand.

Rates of Pay

In Article I of the existing agreement, the rates of pay governing the Service of Dining, Cafe and Buffet Car Employees are as follows:—

—	Basic Monthly Rates	Hourly Rates	
		Pro Rata	Time and One-Half
Dining Car Stewards 1st Year	$258.57	$1·2431	$1·8647
Dining Car Stewards 2nd Year	273.57	1·3152	1·9728
Dining Car Stewards 3rd Year	288.57	1·3874	2·0810
Cafe Car Stewards 1st Year	248.57	1·1950	1·7926
Cafe Car Stewards 2nd Year	258.57	1·2431	1·8647
Cafe Car Stewards 3rd Year	263.57	1·2672	1·9007
Dining Car Chefs 1st Year	248.57	1·1950	1·7928
Dining Car Chefs 2nd Year	257.57	1·2431	1·8647
Dining Car Chefs 3rd Year	278.57	1·3394	2.0089
Cafe Car Chefs 1st Year	243.57	1·1710	1·7565
Cafe Car Chefs 2nd Year	253.57	1·2191	1·8286
Cafe Car Chefs 3rd Year	258.57	1·2431	1·8647
Second Cooks 1st Year	223.57	1·0749	1·6123
Second Cooks 2nd Year	233.57	1·1229	1·6844
Third Cooks	203.57	.9787	1·4681
Fourth Cooks	186.57	.8970	1·3455
Pantrymen	186.57	·8970	1·3455
Waiters 1st Year	186.57	·9066	1·3599
Waiters 2nd Year	198.57	·9547	1·4320
Buffet Car Stewards	213.57	1·0268	1·5402

The employees, in the brief, presented many arguments why the rates ought to be increased by as much as 20 per cent and as previously stated, the company had advanced a proposal whereby there would be granted an increase of 11 per cent if the employees would be satisfied with the existing rules governing their service.

After this Board was in session for some time, it was learned that another Board of Conciliation presided over by Mr. Justice R. L. Kellock of the Supreme Court of Canada was also engaged on the question of the rates of pay affecting over 140,000 of non-operating railway employees presently working on Canadian Railways. Included in that Board's jurisdiction were also the Dining Car Service Employees on the Canadian National Railways. After a lengthy investigation and an exhaustive analysis, this eminent Board recommended that the rates of pay of such employees be increased first by 7 per cent and that there be added to the same an additional sum of 7 cents per hour. After giving consideration to the matter, this Board believes that it ought to follow the recommendation as to increased rates of pay given by the Board presided over by Mr. Justice Kellock. This Board therefore recommends that the majority award of the said Board, namely, an increased rate of pay of 7 per cent plus 7 cents per hour be granted to the employees in the Dining Car Service now employed by the Canadian Pacific Railway.

Working Conditions and Overtime Pay

Under the present agreement, 208 hours or less in assigned service constitutes a basic month's work.

After 208 hours and up to 240 hours of service, *pro rata* pay is given, but time and one-half at the *pro rata* rates is granted after 240 hours have been worked as a punitive or overtime rate.

The employees requested that overtime should commence immediately after the basic month is completed, that is, after 208 hours of service in any one month.

The employees also placed much emphasis on the desirability of reducing the length of certain runs, especially the run from Winnipeg to Vancouver and return. On this particular run, the employees are two nights on the train whilst going to Vancouver, and have a rest period there of from approximately 10 o'clock on the arrival day, the whole of the ensuing night and the next day until approximately 6 p.m. They then proceed back to Winnipeg, are two whole nights en route and have a lay-over period there of three nights and four days. As compared with the runs from Montreal to Winnipeg and from Toronto to Winnipeg and return, the employees are two nights on the run each way, that is, they first sleep on the train during four successive nights and have two days and nights lay-over in Toronto or Montreal, as the case may be. The length of these runs was not objected to, and in the opinion of the Board, are more onerous

than the run from Winnipeg to Vancouver and return. The Company objected to the shortening of these runs, and after considering the matter, the Board does not feel it can make any recommendations as to curtailment in time in regard to these shifts of service.

Coupled with this matter, however, the Board has also considered the sleeping accommodation afforded to the Dining Car Personnel whilst en route. The employees are now required to sleep in small camp cots, or in chairs assembled in the semblance of a bed, which is not level, and which is only covered with a thin mattress. These cots or chairs are spread for sleep in the dining cars, and the employees, while resting, are disturbed by traffic through the cars by the operating personnel. The Board does not consider that such sleeping accommodation is conducive to proper rest or sleep. It believes that better sleeping accommodations should be given to the employees as soon as possible. It was brought to the Board's attention that dormitory cars were provided for sleep and rest by the railway companies in the United States for their Dining Car personnel. The Board considers that such accommodation might be provided by the Company when diesel power is in operation on all main line trains carrying Dining Cars.

In 1949, the employees of both the Canadian Pacific Railway and Canadian National Railway served notice requesting the reduction of the working month to conform with the principle of the 40-hour week. The dispute concerning the Canadian National employees was considered by a Conciliation Board under the Chairmanship of Mr. Justice J. O. Wilson. This Board considered that the impossibility in many cases of reducing hours owing to the length of the runs was a sufficient reason for leaving the commencement of overtime as at present existing. The question was also considered by a Board presided over by Chief Justice E. K. Williams of Manitoba in 1947, and the commencement of penalty overtime was established after 240 hours of service. It is to be noted, however, at the present time, that the 40-hour week has now been established on Canadian railways for non-operating employees. The evidence before this Board was to the effect that the average assignment of the Dining Car Employees was 215 working hours per month, and whilst this Board agrees that the length of the runs may be impossible of curtailment at present, it believes that overtime or punitive pay should commence and be paid after the basic month of 208 hours is worked. This means that in a month of 26 working days per month at 8 hours per day, the employees will be working 208 hours and if the company cannot curtail the length of runs, it recommends that overtime pay at one and one-half times the *pro rata* rate should be paid immediately after 208 hours are worked.

This Board believes that the only just principle governing overtime is that overtime pay should commence when overtime begins and it also notes that the average working week is 41·2 hours for employees now engaged in the durable goods industry, and 41 hours on railways. (Report of Mr. Justice Kellock, dated 21st November, 1952, at page 29.)

Turnaround Assignments

(Article 3a)

This request of the employees would mean that men, now working a basic month of 208 hours or the equivalent of 26 days of 8 hours each, would in some cases receive a full month's pay for half a month's work, that is for 13 working days, where they are now required to serve 26 days. The Board therefore cannot concur in this proposal.

(Article 3)

The Company asks that the note and examples following 3 (c) should be deleted, there does not seem to be any merit in deleting the examples as they clarify the article and they should remain.

The note is not now applicable as this service has been discontinued.

The employees proposed the elimination of the footnote in the present agreement reading:—

"This does not apply to regularly specified layover at away from home terminal as in regular assignment."

This would mean that employees in a regular assignment such as on the Winnipeg-Vancouver run, who now receive 33 hours and 50 minutes layover at Vancouver, in order to rest up for the return trip would be entitled to 12 hours compensation and to this the Board cannot concur.

The employees also requested that the following words be substituted: "For employees in either assigned or unassigned service, terminal time will commence at time of release at away from home terminal. If not used in any service within 12 hours, terminal allowance will commence at expiration of 12 hours and continue for 12 hours."

The Board does not, however, concur in the foregoing as there is now an allowance of 8 hours for the 24-hour period at layover terminals.

Article 4

Reporting and Held for Duty

This article can be brought down into five different categories:—

1. Assigned employees called and reporting for duty.
2. Assigned employees required to perform non-operating work.
3. Assigned employees required to perform non-operating work after having reported for duty.
4. Assigned employees required to perform non-operating work immediately before being released from scheduled trip.
5. Unassigned employees required to perform non-operating work.

Answers

1. Both the Company and the employees request a change in this article. The application of the rule as now written is expensive to the company, but inasmuch as it involves loss of layover to employees, possibly long trips to and from their home, carfare and interference with their social activities, outside duty, the Board recommends that the rule remain as now written.

2. If such employees are called to come from their home and then lose part of their layover, the Board recommends they should be paid as in Number 1 above. If, however, they should be on the premises, the Board recommends that they be paid double, on a minute basis to the nearest 15 minutes, once for performing the work and once for loss of layover.

3. In this case, the employee does not lose any layover but no doubt they have to work harder in order to adjust conditions on the car to which they transfer. The Board considers the employees are not justified in asking for extra compensation.

4. In this case, the employees cannot help but lose some of their layover and they have extra work to perform. The Board recommends that in such cases the employees be paid twice, i.e., once for the extra time required to do the work, once for the loss of layover; both should be adjusted on the minute basis to the nearest 15 minutes.

5. Both the employees and the company request revision of Clause B. The Company requests a change whereby employees held after 4 hours will be paid on the minute basis instead of full 8 hours if held after 4 hours. The employees' request is to the effect that if held after 8 hours, they will be paid on the minute basis. The Board recommends no change be made in the present rule.

Article 5

Rest Periods

The employees propose the elimination of Section 2 of this article. We understand that when cars are running with reduced crew, the volume of business may fluctuate and reduced crews are at times required to serve more meals than can satisfactorily be taken care of before closing time at 10 p.m. In the past, we understand there have been disputes between the company and employees regarding the eligibility of claims for overtime, it therefore seems advisable to have a yard stick as a guide to settling such claims. We would suggest, however, that the officers of the department should continue to make every effort to ascertain the number of passengers who are likely to require meal service and staff cars accordingly.

Article 7 (a)

Assigned Employees

The Company suggests revision of this article for clarification and sets a maximum of 16 hours in a 24-hour period for loss of layover. This is a compromise to the employees, but it was no doubt put in to offset other clauses of less advantage to the employees. The Board does not consider that in view of other recommendations favourable to the employees, that any change should be made in the present maximum of 12 hours in a 24-hour period.

Article 7 (aa)

The Company states their suggested change is for clarification only and does not involve any basis change. In view of this, we suggest that no change be made in the present rule.

Article 7 (c)

The employees request payment for loss of layover incidental to late arrival of trains at home and turnaround points. The Board recommends that in cases of trains being 24 hours or more late, employees should be given extra layover or paid compensation for the hours in excess of 24 hours on the basis of being paid twice, i.e., once for the service hours and once for the loss of layover. Layover compensation should not be computed at more than 16 hours in any 24-hour period.

Article 7 (e)

Both the Company and the employees request changes in the clause. The Company for simplification only, but the employees' request was to the effect that

at all terminal points, a sufficient number of men would be assigned as standby men, which would take away from the Company the prerogative contained in the present clause where provision is made that standby would be maintained only "where business warrants." The Board does not concur in the employees' request which would, if concurred in, restrict unduly what appears to be a proper function of management.

Article 7 (f)

The employees suggest a new clause reading: "When extra or spare men are used to fill vacancy in assigned service, such employees will be considered as being an assigned employee." The Board feels that there is some justification for the employees' request and recommends its inclusion in the agreement.

Article 7 (g)

The Company requests a new clause reading as follows: "Where a regular assignment has been temporarily discontinued due to train mishaps, strikes or acts of God such as: storm, hurricane, earthquake, flood, etc., the employees affected when at their home station, shall be privileged to operate on the spare board; when regular assignment is restored, the displaced men will be returned to duties on a first in—first out basis." The Board understands that this is the present practice and recommends that the new clause be adopted.

Article 8

Seniority

The Company requested that in granting seniority to new employees, the basis of setting up their service would be changed from 6 months to 156 days actually worked. The Board recommends adoption of this rule.

Article 8 (b)

The Company suggests certain revisions for the purpose of clarification, in view of the fact that employees are familiar with the present wording, the Board recommends that no change be made therein.

Article 8 (c)

Both the Company and the employees suggested revision of this clause. The Company suggested that particulars would be bulletined for 10 days instead of 20 as at present. The Board considers this is a matter of mutual agreement and makes no recommendation herein. The employees' request is to the effect that the monthly guarantee of employees exercising their seniority rights and change of time, will not be impaired. The Board cannot concur in this request, but recommends that a senior employee, while waiting a new assignment at home terminal, might be assigned to replace a junior employee, who might be performing terminal duties.

Article 8 (d)

The Company requests that this clause be deleted. The Board can see no advantage in deleting the clause. As it is now familiar to all employees, it recommends it should not be changed nor eliminated.

Article 8 (e)

The Company requests a change in this clause for simplification but the Board cannot see any merit in the suggested change, and recommends that it remain as at present, with an added clause, to protect employees who when assigned to a temporary vacancy might lose one in a higher classification. The addition of the following is hereby recommended: "In no case will the application of this rule lessen the amount paid to employees assigned to temporary vacancy."

Article 8 (g, h, and j)

The Company suggests a revision for clarification only. The Board recommends that no changes be made therein.

Article 9 (a and b)

Promotion District

The Board does not believe that the runs between Winnipeg and Vancouver are any more onerous than the runs from Montreal and/or Toronto to Winnipeg. As a matter of fact, the last two runs involve two days on the train in each direction without any off train rest at Winnipeg, whereas the Winnipeg-Vancouver runs entail only two nights continuous on the train in each direction with one night's rest off train at turnaround points. In view of the evidence submitted regarding the undesirability of cutting out cars at Swift Current and Medicine Hat, the Board does not feel justified in recommending a change in the operation, whereby cars run through from Winnipeg to Vancouver.

The operation of cars through from Winnipeg to Vancouver, when permanently put into effect recently disturbed the relative standing of crews in Toronto, Winnipeg and Vancouver districts inasmuch

as it gave Toronto and Winnipeg an additional crew and took away two crews from Vancouver. The Board understands how this affected the seniority rights of various employees, inasmuch as senior employees in the Vancouver district were laid off and possibly men with less service in Toronto and Winnipeg were given employment. However, we understand that with the inauguration of cafe service on the Kettle Valley Line, most of the senior men have been put back into service.

To restore the former practice of cutting out cars at Medicine Hat and Swift Current would again affect the rights of certain senior employees and inasmuch as the organization does not suggest the cutting out of Toronto-Winnipeg crews at Fort William, it would mean that Vancouver would gain two crews and Winnipeg would lose two crews. This is particularly undesirable to Winnipeg, as they do not have the same opportunity to participate in summer tourist business handled on the Mountaineer and special trains, nor in military business arriving from Korea. The Board suggests that, in future, before changes are made involving the redistribution of cars affecting a number of districts that the same should be discussed between the officers of the Company and representative of each district affected.

Article 10

Method of Promotion

The Company suggests revision of Clause 10 (a) and (b). The Board does not feel there is sufficient merit in the Company's proposal for revision of this clause and recommends it should remain as at present.

Article 11

Reduction in Staff (a) and (b)

The Company suggests revision for the purpose of clarification. The Board suggests that there is not sufficient merit in the Company's proposal and recommends no change.

Article 12

Transferring of Employees

The Company requests revision for the purpose of clarification but does not propose any change in the present practice. The Board recommends that no change be made therein.

Article 15

Staffing of Cars

The Company requests that this clause be deleted. The Board cannot concur with the Company's suggestion that this clause be deleted.

Article 16 (a, b, and c)

Miscellaneous

The Company requests revision of these clauses for the purpose of clarification but the Board cannot see sufficient merit in the change of the wording to recommend its adoption.

Vacation Agreement

The employees request a change whereby they will be compensated at a daily rate representing 1/26th of the monthly rate, applicable to the class of service to which they were assigned at the time of taking vacation, instead of 1/30th of the monthly rate. The Board concurs in the employees' request.

Escalator Clause

As this Agreement will probably be made for not more than a term of one year, and the cost-of-living trend appears to be downward, the Board considers that such a clause is not warranted under present conditions.

Contract Term

As the present Agreement expired on April 29, 1952, the Board recommends that the term of the new contract should run from the date of ultimate agreement between the parties.

All of which is respectfully submitted.

Dated this 15th day of December, 1952.

(Sgd.) James H. Stitt,
Chairman.

(Sgd.) Wm. G. Currie, QC.

Minority Report of Board Member C. W. Rayfield

To:
The Hon. Milton F. Gregg, VC,
Minister of Labour,
Ottawa, Ontario.

Dear Mr. Minister:

With great regret, I do not find it possible to agree with all the recommendations made, in this Case, by my Colleagues.

I am fully in accord with the recommendations made in report signed by the Chairman, with one exception only, viz. Article 2 "Working Hours". The present agreement reads: "Two hundred and eight (208) hours or less, in assigned service, shall constitute a basic month's work. Hours in excess of 208 and up to 240, will be paid at *pro rata* rates. Service hours in excess of 240 shall be paid for as overtime at the rate of time and one-half the *pro rata* rate on the actual minute basis to the nearest 15 minutes".

The Chairman has recommended that overtime—or punitive pay—should commence after 208 hours. So far as local runs are concerned, i.e., those which are completed and employees back at their home station in one or two days, it is not a difficult matter to relieve employees within a few hours of the basic month, thereby avoiding any great amount of overtime, or undertime; on transcontinental trains, however, where nine crews are operated, such as on the Winnipeg-Vancouver run, trains 7 and 4, the crew starting out on the run on the first of the month puts in 228 hours 50 minutes, whereas the fourth crew starting out on the fourth of the month puts in only 196 hours 15 minutes. The average working time for the nine crews is: 218 hours. In the first case, employees are paid 20 hours 50 minutes overtime, while the fourth crew is paid 11 hours 45 minutes unearned time. To insert an additional crew in the line, on the basis of the increase recommended by the Chairman, would cost $2,696 per month, and would reduce the working time of each crew to 196 hours 15 minutes, thereby giving each crew 11 hours 45 minutes unearned pay each month. I cannot agree to this heavy additional expense and the payment of so much unearned time each month.

I am fully aware that the average workweek for employees now engaged in the Durable Goods Industries is 41·2 hours, and on railways 41 hours, but do not feel that these comparisons are a proper yardstick with which to measure the hours worked on a dining car. In the first place, the above averages are set on the basis of the time at which employees punch the clock in the morning, punch out at lunch time, in again after lunch, and out at night. They may spend anywhere, from a few minutes up to an hour or more, in the morning and at night, going to their work and returning at the end of the day, whereas on a dining car, on transcontinental trains (these are the ones most affected by overtime pay), the employees are on the car and are paid from the time they get up in the morning, at 6 a.m, until they go to bed at night, at 10 p.m. They are under pay while making their ablutions, and while eating breakfast, lunch and dinner, and is it very exceptional when employees do not have two hours or more relaxation during the afternoon. It is true, 16 hours a day is a long tour of duty, but there are certain favourable conditions in that employees have lengthy periods at their home station between trips, which they can spend with their families, go to places of amusement, etc.

The wages and working conditions of Dining Car Employees and Sleeping Car Porters, on the Canadian Pacific and the Canadian National, have, over the years, been pretty much on an equal basis, and, inasmuch as the Canadian National Dining Car Employees have been, and will continue to operate on a 208-hour month, with overtime at *pro rata* rate up to 240 hours, and at time and one-half after 240 hours, I am confident that if this Board were to recommend more favourable conditions on the Canadian Pacific than are now in effect on the Canadian National, it would cause dissatisfaction among the employees of the latter road.

The Sleeping Car Porters on the Canadian Pacific are now working on a 208-hour month, with *pro rata* overtime up to 240 hours and time and one-half thereafter. They did not ask for any change in their application for increased rates before the Kellock Board, and are evidently satisfied with the present arrangement.

I would like to point out that the question of penalty rates for hours in excess of monthly guarantee has been up before Conciliation Boards in the past, and in each case the decision given was in favour of a cushion of non-punitive overtime.

In 1947, the question was handled by a Conciliation Board under the chairmanship of Chief Justice E. K. Williams, when he ruled as follows (when the basic month in Dining Car Service then existing was 240 hours), that penalty overtime (i.e. time and one-half) should start to accrue after 245 hours; overtime at *pro rata* rate to be paid between 240 and 245 hours.

In 1949, the employees of both the Canadian Pacific and Canadian National served notice requesting the reduction of the monthly work month to conform with the principle of the 40-hour week. The dispute concerning Canadian National employees was considered by a Conciliation Board under the chairmanship of Mr. Justice J. O. Wilson. In its report, the Board recommended as follows:—

"Dining and Sleeping Car Employees.

"Dining car employees include Stewards, Waiters, Cooks and Dishwashers. The sleeping car employees include Sleeping Car Conductors and Porters. The basis of employment of these men is different than that of other classes of rail workers by reason of the requirements of the service in which they are engaged. They are paid for 240 hours of work per month and can be required to work 240 hours per month. In point of fact, most of them work less and we are informed that the

average hours on duty are about 225 per month. The nature of their work is such that they must be on duty continuously for considerable periods en route, but the hours of duty include periods of relaxation and rest when they are not required to give service to the travelling public and time consumed in taking meals which are not deducted. Those of them who are required to be absent from home for long continuous periods during the month are generally granted compensating periods of rest at home during the month.

"The application of the general formula we have recommended for other railworkers to these two classes is not easy. We think the fair thing to do is to reduce the guaranteed and required monthly hours of these employees to 224 hours per month. They should be paid for those 224 hours per month at the rate of 106·63 per cent of their present hourly earnings.

"Considering the impossibility in many cases of reducing hours in these trades to the 224 hours per month standard, we think that penalty overtime should be payable, as at present, for hours in excess of 490 in a two-month period, with the new standard rate for the hours in excess of 448 and not greater than 490. This recommendation follows the general lines of that made in respect of dining car employees by the Presidential Emergency Board in the report already referred to, except that there the reduction in standard work hours was greater."

It will be observed that the Board again considered it necessary to retain a cushion of excess hours payable at *pro rata* rates.

The final settlement of this dispute, in conformity with the adoption of a 40-hour week for the non-operating railway employees, provided for the work month of 208 hours with *pro rata* pay for hours in excess of 208 and up to 240, penalty rates to apply thereafter.

The decisions rendered by these two Boards confirm my belief that no change should be made in the present Agreement, which provides a basic month of 208 hours, with overtime at *pro rata* rates up to 240 hours, and overtime at time and one-half thereafter.

All of which is respectfully submitted.

Yours very truly,

(Sgd.) C. W. Rayfield.

Report of Board in Dispute between

Canadian National Railways

and

Brotherhood of Railroad Trainmen

The Conciliation Board appointed in the above matter, consisting of His Honour Judge W. S. Lane of Picton, the Hon. Senator A. W. Roebuck, QC, of Toronto and Mr. Theodore R. Meighen, QC, of Montreal, has met the parties at the City of Toronto on July 22, July 23, October 1 and November 4, 1952. In addition, the Board met in executive session at the City of Toronto on the 28th of October, 1952.

The parties were respectively represented as follows:—

For the Company—

Mr. R. Hayes, Chairman of Negotiating Committee,
Mr. F. E. Jones, Vice-Chairman,
Mr. W. G. Cunningham, Member,
Mr. L. S. Wilson, Member,
Mr. M. L. Milner, Member,
Mr. G. S. Young, Member,
Mr. J. C. Munro, Member.

For the Union—

Mr. A. J. Kelly, Chairman of Negotiating Committee,
Mr. L. C. Malone, Secretary of Negotiating Committee,
Mr. C. W. Stanley, Statistician,
Mr. D. Paltiel, Statistician,
Mr. P. S. Rody, Member,
Mr. P. R. Lewis, Member,
Mr. T. D. McLaughlin, Member,
Mr. R. H. Morrison, Member,
Mr. W. G. McGregor, Member.

At the first and second meetings on July 22 and 23, Mr. Kelly conducted the case on behalf of the Employees, assisted from time to time by other members of the Bargaining Committee and by Mr. Paltiel, one of their technical advisers. By reason of illness, Mr. Kelly was not able to be present at the third meeting on October 1, and Mr. Malone conducted the case with the assistance of the technical

advisers at that time. Mr. Kelly, however, was fortunately able to attend the last meeting of the Board, and conducted the negotiations on behalf of the Union, with the assistance of Mr. Malone, on November 4. The case on behalf of the Company was conducted by Mr. Hayes, with the assistance of Mr. Jones and the other members of his Committee.

The requests made on behalf of the Employees were almost all requests which could be classed as economic in nature. They consisted of a request for wage increase of 35 per cent across-the-board, an escalator clause, reduction in hours with maintenance of take-home pay for certain classes of employees, and two more or less unimportant rule changes which, while not serious in impact upon the economy of the Railroad, did have an economic import. Management, on the other hand, asked for seven rule changes on the Atlantic and Central Regions, and seven rule changes on the Western Region. Many of these requests for rule change were the same on the various regions, but were duplicated by reason of the fact that separate agreements are in effect on those systems.

The issues were very thoroughly canvassed by both parties. The Union went to great lengths to show the necessity of their various requests, particularly with regard to the request for wage increases, where they attempted to show that there were many grounds which entitled them to various amounts of increase individually, but which when taken in conjunction showed, in their view, that their request for 35 per cent increase was not unreasonable. They advanced many arguments supporting their escalator clause, as well as their request for a forty-hour week for yardmen with maintenance of take-home pay. In the latter connection, they pointed to the experience on American railways, which they felt was the place to look for a proper comparison on this issue.

The Company, on their part, supported their requests by showing or attempting to show that the rules concerning which they were asking for amendment or elimination had been in effect many years, many of them since 1919, and had grown antiquated. They had, by changing conditions, become burdensome and expensive, and generally detrimental to the efficient operation of the Railway. They went thoroughly into each rule and the basis for their requests, showing that some of the rules had very little foundation in reason and were merely a growth from practices which, in some cases, had been inherited from railways absorbed into the Canadian National.

There was considerable rebuttal evidence given by the Company with regard to the cost factor involved in the various monetary requests of the Union. There was considerable stress given to the fact that, if the Union's request for a 35 per cent increase were granted, it would cost this Railway 11½ million dollars per year, and that if a change in the hours of work were granted to yardmen, it would add an additional cost factor of more than four million dollars. In addition, the Company went very thoroughly into the question of increased cost of living, and pointed out that, if taken from the date of the last settlement to this date, the increase in the index would be substantially less than 8 per cent rather than the 10·3 per cent which was set out by the Union in their statements to the Board. They pointed to the position of the Company with regard to rate increases, and urged that such an additional

On December 31, 1952, the Minister of Labour received the majority and minority reports of the Boards of Conciliation and Investigation appointed to deal with matters in dispute between the Brotherhood of Railroad Trainmen and (1) the Canadian National Railways and (2) the Canadian Pacific Railway Company.

The railway personnel affected by the disputes are set forth in the reports reproduced below.

The Conciliation Board affecting the employees of the Canadian Pacific Railway Company was under the chairmanship of His Honour Judge W. S. Lane. The nominee of the company was Norman L. Mathews, QC; the union nominee, the Hon. A. W. Roebuck, QC.

The Conciliation Board in the dispute affecting the employees of Canadian National Railways had the same chairman and the same trade union nominee. The nominee of the Canadian National Railways was T. R. Meighen, QC.

The majority reports, which under the provisions of the Industrial Relations and Disputes Investigation Act constitute the reports of the Boards, were signed by the chairman and the company's nominee in each case. The minority reports were signed by the Hon. Mr. Roebuck.

The majority and minority reports in each case are reproduced herewith.

cost would be most serious from the standpoint of the operation of the Company. They urged that there be some amendment as requested by them towards allowing more efficient operation of the Railway so that it would be in a position to successfully compete in the transportation field.

All issues were competently met and thoroughly discussed by all parties, both by way of defence and by way of rebuttal on defence, so that the Board had an understanding of everyone's point of view upon the issues before we made any attempt to formulate our report. After the issues had been thoroughly placed before us, and after the Board had met in executive session to correlate our thinking, the Board met the parties and made a serious attempt to see if there was any possibility of getting the parties on some common ground towards a settlement. It was found that there was no such possibility, and the Board found itself in the position, then, of making our findings and formulating our report. We do this with the feeling that, while there is some serious amount of difference on the issue of wages as well as on certain other issues, the parties will, after having received the report, find it possible to renew negotiations and work out a settlement along the lines of this report.

Generally speaking, this Board does not consider that there is any special sanctity to be found in a set of rules merely because they have been in effect a great number of years. Neither are we able to find that the fact that because those rules originated from the so-called MacAdoo award makes them any more sound in principle than any other rule. Conversely, we are not prepared to find that the fact that these rules came to Canada in the MacAdoo award from the United States should make these rules any less acceptable to us. In our opinion, every rule or term of any contract must justify itself by its own terms, and in the net analysis by its result in operation. These rules have, in some cases, been in effect a great number of years. This fact must be considered when we come to assess the value of the particular rule. If they had not been relatively satisfactory, surely they would have been changed during the years. On the other hand, conditions do change from time to time, and old rules do have a tendency to become obsolete, antiquated and no longer useful. Some may become harmful and a hindrance. If this is the case, we feel that it is in the interests of both management and the employees that these antiquated, harmful or damaging rules should be changed. This must be so, even if a number of employees, large or small, are adversely affected by the change. We must remember that the interests of each employee by and large must be identified with the common interest. No individual has a higher right than the greatest number, and therefore no special group has a right to maintain a rule which may grant special privilege, but which in giving that special privilege does so at the expense of the larger group. It seems to us that the individual interest must be governed by the group or over all interest. Following this thought, it seems to us that the only way by which the interests of the employees generally can be maintained is to see to it that the Railway operates efficiently. In other words, the interests of both Management and the Employees must stem from a healthy operation of the Railway. This must be without exploitation on either side. The Railway must be allowed to operate efficiently, while the employees must be paid and provided with conditions of work which will recognize the dignity of the individual as well as the real contribution which he gives to the operation of the Company. In addition, we must remember that the welfare of this country as a whole is more than we wish to admit dependent upon the Railways. The welfare of the Railways, in turn, depends largely on co-operation between its employees and its management. It follows, then, that the disputes involved in this Conciliation must be worked out, not in the interests of the Company, not in the interests of the Employee, but in the interests of both parties without any bias towards either. We have approachel the issues with these thoughts in mind.

On the question of the request for wage adjustments which will be specifically referred to later on in this report, we feel that we must approach this problem bearing in mind the factors hereinafter set out, in addition to those already enumerated. The men, in our opinion, have made out a case for some increase in their wage rates, if we are prepared to concede that cost of living with its related factors has a bearing on wage rates. It would be well to remember, in this connection, that cost of living as tied to the index, or any increase however measured, where it is present with an inflationary trend, carries with it where there is no escalator arrangement a cumulative loss to the worker, or for that matter to the salaried employee. In addition, as a co-existent factor in the question of cost of living, but not measured by any index, is the question of direct and indirect taxation which has been and is continuing to

mount, with its impact upon the income of the individual and its resultant reduction in the standard of living of that individual. In this connection, it might be well for us to remember, however, that Railway trainmen are no different than is any other segment of society in so far as the impact of taxation is concerned; both have to the degree of taxation a depletion of their take-home pay and a reduction in their standard of living. These factors may well be considered when assessing the issue of the rising cost of living, and how it affects the individual in relation to an increase in wage which he may or may not have made out. There are other arguments advanced in this Conciliation dealing with the increase of productivity of the individual trainman and the collateral arguments that the individual trainman is entitled to his share of the increase in national production as is shown by the increase in amount of goods and services available to each person in the country.

We think most of us agree and must agree that cost of living with its correlated factors is a matter of great importance to any person living on a fixed income, whether it be hourly wage or a salary, and that the individual who can point to an increase in that cost of living has, to some degree, made out a case which requires a wage adjustment. How far that wage adjustment should go depends on how far back one is prepared to go in making comparisons, and how many of these factors one is prepared to admit has an effect upon the wage rate. The Board was not particularly impressed by the argument that the individual employee had a claim to increase in his wage rate to provide for the purchase by him of his share in the goods and services made available by the increased national production. There is no doubt that indirectly every person has a stake or share in that increased national production and the goods and services made available thereby, but we feel that this argument does not directly enter into the wage problem as a basis for increase, and that the share in those goods and services is automatically covered in any scale of living or in any increase in wages which may be measured by any general basis of comparison. To utilize the increase in national production as a basis or argument from another standpoint seems to us to be fallacious, because it is not so much national production that counts in this regard as does national consumption, and we have no evidence of increase on that basis. Even if we had, however, it appears to us that it is going too far to say that this is a separate element involved in wages which must be considered, because we feel it is a matter which is automatically taken care of by the economy of the country. The Board was also not impressed with the argument that there had been a significant increase in the productivity of trainmen. The evidence did not seem to completely bear out this thesis. It may be that there is some truth in this statement, but once again it depends on where the base of comparison is taken. If we compare the present to certain periods of slack operation of the Railway in the past, it may be that by comparison the trainman is producing more now than he did then. Such a comparison, however, does not seem to us to be valid. We feel that the only fair comparison would be between relatively equal periods where some technological change such as an introduction of diesel power might possibly have been the basis for a change in work load. Under those conditions, there might have been a change in productivity which would have to be recognized. There was no evidence before us here that there was any such factor involved. Nevertheless it is true that all these factors must be considered and must be weighed when arriving at a figure which would be a proper figure upon which to fix the rates for the Railway at this time.

There is an additional factor, however, that must be considered. The wage rates were fixed by agreement on March 3 of 1951, when the last known cost-of-living index was for January. It would seem that there would be much to be said for the argument that, when two parties sit down and agree on a rate, the resultant rate is usually a proper one. Such agreement, therefore, should at least leave room for the argument that we should not go back of January 1951, in making our comparisons for wage increase. Were this done, and were we to take into consideration the present index, we would have to find that the amount of increase indicated now would be less than 8 per cent. There is another factor which must be considered in our thinking upon this matter. It is to be found in the settlements with the Locomotive Engineers and the Brotherhood of Railway Conductors. It is true that these settlements, except in so far as they may lend some confirmation to this basic argument of rate structure, should have no effect upon this Board because those organizations deal for their own membership and in no sense are, or should be allowed to set the bargaining for other groups. The Company also alleged at the hearings that

they had offered the Brotherhood of Railway Trainmen during negotiations a 9 per cent increase, which was refused, and of course was withdrawn upon refusal. The Company now takes the position that, under present conditions, they would not be prepared to make so high an offer.

There is an additional and very important factor involved in this wage issue. It might be considered in relation to the aspect of ability to pay. Without question, the operation of the Railways in this country is marginal. Their rate structure is a controlled structure and one which is rather judiciously guarded by the Board of Transport Commissioners. This fact has been borne out by the recent decision of that Board refusing a rate increase to the Railways. This refusal, however, is not the last word and cannot be considered to be the whole answer because, if other factors are in the future put before that Board on another application, it may be that they in their wisdom may deal differently with it. The question which is far more important for us to consider in the matter of this Conciliation is how much rate increase would it be possible for the Railways to add to their present rates without invoking the law of diminishing returns and crippling the operation of the Railways from a competitive standpoint. There is no doubt that other forms of transport take a great deal of the business now, and if rates were increased substantially, those other forms of transport would take an even greater share of that business. Such a result could have disastrous effects upon the Railway employees themselves. It has been said with truth that the Railway employees should not be asked to subsidize the operation of the Railways in the interests of the country in general. With that statement, every member of this Board agrees. It has also been said that it is the special duty of the federal Government of this country to see that the Railways operate by whatever means may be necessary to that end. The statement is true in so far as it goes, but it cannot be expected that any Government can or would be justified in subsidizing a railway operation for the express purpose of putting the Railway employees in an especially favourable position in relation to their fellow workers in this country. We must approach the problem from the standpoint of doing justice to the men, but at the same time we must do justice to the Railways and to the country at large.

This Board, after hearing all the representations and bearing all these factors in mind, are prepared now to find that there should be a wage increase across-the-board at this time of 12 per cent. In making this recommendation, we point out that, if computed on the average of basic wage rates ($1.29 per hour), it would mean 15½ cents per hour, but if calculated on the average hourly earnings ($1.66 per hour) as shown to us by the Union, it would mean 19·9 cents per hour. In view of the fact that earnings are affected in reality by any recommendation, the latter figure is the effective one in fact. While this amount is considerably higher than the amount indicated by the present cost-of-living index, nevertheless when the other factors are considered, we feel this increase is indicated. We do, however, make this recommendation conditional upon the acceptance by the employees of certain rule changes which we are recommending in this report, because we feel that in part some of the increase must be earmarked for the purchase by the Railway of certain changes in the rules. Certainly the amount of our wage recommendation would not be as high if it were not coupled with the rules recommendations.

This wage recommendation is made at the instance of the Chairman, with the somewhat reluctant concurrence of Mr. Meighen. Mr. Meighen had felt that a 9 per cent increase would be more in accord with the realities of the situation, but to get an effective report of this Board and to avoid a disagreement, bearing in mind that there can be no retroactivity involved in this recommendation because of the agreement between the parties shown to us at the sessions of the Board, he has decided to concur with the Chairman in making this recommendation.

On the question of escalator clause, we do not feel that we can make a recommendation at this time for such a clause in this contract. We base our finding in this connection on the fact that, in view of the complicated system of payment in the Railway set-up, an escalator clause would be almost an impossibility from the standpoint of administration. It could not be expected to operate in view of this complicated pay system except on a half-yearly basis, and even then there are many doubts as to its satisfactory working. We recognize that there is much to be said for it if the cost of living is a decisive factor in any wage adjustment, but the factors involved against it, in our opinion, are overwhelming and the value of it is not sufficiently great to make it feasible or even a possibility at this time.

On the Union's request for a 40-hour week for yardmen, we recognize that the

40-hour week is more and more becoming a pattern in industry in this country. We recognize, too, that the 40-hour week for yardmen is in effect in certain American railways, but we must bear in mind in this connection that it was not shown to us by any means that it is in effect in the majority of American railways, and even where it has been put into effect it has not been done with a complete maintenance of take-home pay. We do not feel that without this factor it would be acceptable to the men in Canada. In addition, we wish to point out that conditions in Canada are not conditions in United States, and this applies particularly to the railways, because here with our sparse population and our long rail lines the conditions of operation are not at all similar to the conditions of operation in the areas of much denser population in the United States. Therefore, in our opinion, a comparison between conditions here and there in most instances is not at all valid. We cannot pass this issue without finding that the reduction in hours as requested, with the maintenance of take-home pay, would cost to the Railway an amount of money which is completely out of line at this time with its financial position, and completely out of line with any benefit which the men could hope to get from it. We, therefore, do not recommend that there be any change in this regard for yardmen at this time.

We now come to the Company request for rule change, and in this connection we propose to deal with those requests which affect the Atlantic and Central Regions first. The first request on this district is to eliminate all rules providing for payment of a monthly guarantee in all classes of service. This request applies to and requires changes in Articles 1, 7, 14 and 94 of the agreement on the Atlantic and Central Regions. We have gone into the position of both parties with regard to this request, and while we appreciate the Railway's attitude we are not prepared to accede to it. The men, it seems to us, are entitled to guarantees for their services as is contemplated under these rules, and we do not feel that the Company's requests at this time carry with them sufficient strength to warrant that the Articles in question be amended. We, therefore, recommend that Articles 1, 7, 14 and 94 be not changed in the new agreement.

The second request by the Company is that the paragraph in Article 1, relating to rates of pay in passenger service providing for payment of Assistant Conductors' or Ticket Collectors' rate only on established assignments for periods of two weeks or more, be deleted. This request is based on the Company's contention that any job should have its job rate, and that irrespective of the length of service the incumbent should be paid at that job rate. Against this, the Union's position is that the man should not be prejudiced by being taken off a better paying job and placed on this type of work irregularly and for short terms with resultant reduction in pay. The Union takes the position that, if the Company does take him off the better paying job and puts him on this job, it is a matter of managerial expediency and the man should be entitled to maintain his own regular pay. The Board feels that there is considerable merit in the Union's point of view, and therefore, we would not recommend a change here.

The third request by the Company is to eliminate (b) part of Article 14, which provides for a guarantee of 100 miles or eight hours to regularly assigned way freight, work and construction trainmen. Here again the Board appreciates the Company's point of view that this Article might be somewhat unreasonable in its cost factor. On the other hand, once the men are assigned to such service, it seems to us that they are entitled to some guarantee, and if for any reason the service were cancelled within the limits of this rule, they should be guaranteed. We, therefore, cannot bring ourselves to recommend an amendment to this rule at this time.

The Company's fourth proposal is to amend the yard overtime rule to provide for payment of *pro rata* rates to a yard helper when required to perform a second tour of duty as a yard foreman within a twenty-four hour period. The Company's position on this is that they have not the right, under the present contract, to do otherwise than call up the man who has seniority, whether or not he has been long enough off to avoid overtime payment. In result, then, in their interpretation of the present agreement, the man works as of right and they have no alternative but to call him even though at the same time, by reason of the present rule, he is entitled to overtime payment. We can readily understand that, if this interpretation is the correct interpretation of the present rule, it leads to an intolerable situation. If management has the right to call up the next man in seniority, who would not be under the circumstances entitled to overtime pay, then we feel that the rule would be reasonable. Overtime, as we understand it, is never intended to

68543—6½

form a part of the wage structure as such to enforce a premium pay, but is rather a penalty payment designed so that overtime assignments will be avoided. Therefore, the decision to call a man who would be entitled to overtime pay should be a matter of election in management if it is to be at all logical; or in the alternative an emergency which by reason of unusual circumstances cannot be avoided, and therefore a managerial responsibility. Here it would appear from the Management's standpoint that the Article operates in another way, and would appear to be merely a way of collecting a premium payment. The Union, however, does not agree with Management's interpretation. We believe, therefore, that there is little difference between the parties in fact, and that if the issue is clarified the ends of justice and reason will have been met. We, therefore, are prepared to recommend to both parties that the present Article 93 in its present form be maintained, but that the following note be added to the rule:—

> Nothing in this agreement shall obligate the Railway to call a spare yardman who would be entitled to payment of overtime rates when there are available spare yardmen who could work on *pro rata* rates.

The Company's fifth proposal is to amend the yard overtime rule to provide for payment of *pro rata* rates to yardmen when required to perform a second tour of duty, not continuous, within a twenty-four hour period. This request applies to Article 93, which covers both the situations set out in the fourth and fifth proposals of the Company, and only one amendment is necessary to meet both proposals. Therefore, the comments which we have made with regard to the fourth proposal of the Company would apply equally to this request. We see no reason why the Article itself should be amended, but we do feel that the note of clarification should be added to it.

The Company's sixth request is to revise current rates to provide that initial and final terminal delay in all classes of service be used to make up the minimum day. This request deals with Article 3, and in that connection we would not be prepared to recommend that there be an amendment to Section (a). With regard to Section (b), we feel that this initial and final terminal delay is calculated to provide for payment for services rendered which might be considered as extra services. To the ordinary worker, if he were paid for his eight-hour day and required to stay on, it would be considered as overtime. In the running trades, the eight-hour day is paid on the basis of mileage or alternatively time. There is no doubt in our mind but that initial and final terminal delay pay should be paid, particularly in view of the fact that it is part of the pay structure on the Canadian National Railways, but we are none too convinced that this should form a premium payment over and above all else. We feel that Section (b), therefore, should be amended so that the last sentence of it will read: "Time so paid may be used to make up the basic day and the monthly guarantee."

The Company's seventh request deals with the elimination of the rule providing for additional payment while switching en route. It appears that this rule is a rule which works as a premium over through freight rates up to way freight rates, and is calculated to compensate for something which is somewhat hybrid in nature. The Board, after thinking this matter over rather thoroughly, have come to the conclusion that at the moment under the present rate structure it would probably not be fair for us to recommend that this rule be eliminated or amended. It is true that the crew on a through freight train is paid for their time or their mileage. From this one might say that the employer has a right to expect them to do any work that was necessary, but where there is switching en route of a sufficient quantity the rates go up to the way freight rates, and therefore if half the switching is done on a through freight there should be something more than through freight rates paid. Under these circumstances, therefore, we must recommend that the present rule continue.

We have dealt with the Company requests on the Atlantic and Central Regions. We must now turn to the Company requests on the Western Region.

The Company has asked for the elimination of the rate differential in freight service on lines west of Edmonton. The present rule calls for a differential of 16 cents per hundred miles more on lines west of Edmonton than applies to lines east of Edmonton. The Company takes the position that the differential may have been justified at its inception in construction days, but that it is no longer justified under the operating conditions of the present. The Union takes the position, on the other hand, that the differential is still justified by the difference in terrain and the conditions of mountain operation. This Board can quite understand that there is considerable difference of terrain on the lines west of Edmonton from that on the lines east. It is difficult for us as

laymen to understand how that terrain affects materially the rail operation. It is difficult for us to understand how the terrain increases hazards to any great extent. We would, therefore, be inclined to the view that the Company has made out a case here. On the other hand, we understand that there is still a differential in existence on the CPR lines in roughly the same area. This, we understand, has not been carried to an issue in the Conciliation proceedings between this Union and that Railway. The differential here is not large. We feel, therefore, under the circumstances that in spite of the fact that, in our opinion, the request is justified, we should not at this time make it the subject of a recommendation.

The Company's second request is to eliminate all reference to daily and monthly guarantees. This Board cannot follow the argument, or at least we are not convinced by the Company's argument, that these guarantees should be eliminated. We feel that the men are entitled to their guarantees, and that they should remain in their present form. We would, therefore, recommend that Articles 1, 2, 3 and 4 should be retained in their present form.

The Company's third request is to eliminate Article 5, Rule 40, in its entirety, and substitute the following:—

> The regular way freight trains will not be doubled headed, except where there is but one freight train each way daily and in case of storms, and in which event the tonnage will not exceed the weight of the largest engine attached.

The present rule, which is considerably more complicated than the rule above requested, is, it appears from the Company's point of view, a completely restrictive rule. It appears to have grown on the Canadian National Railway system from something that was in effect on the old Canadian Northern system, and is a legacy of doubtful value. Under the present rule, the maximum number of cars is fixed at 35 if the train is double headed. In the suggested rule, it is not so limited. It would seem that there is protection under the suggested rule where the train is limited to the tonnage of the largest engine attached. It would seem that there is no real basis as to why this amendment should not be granted. As we understand it, there is no such restrictive rule on the Canadian Pacific or on the Canadian National Atlantic and Central lines. We, therefore, cannot see why there should be any objection by the Union to re-writing the rule as presently requested. Taking everything into consideration, therefore, we are prepared to recommend that the rule be amended in the way that the Company has requested.

The Company's fourth request is to amend the rule to provide that initial and final terminal delay will be paid on a minute basis and that initial and final terminal delay in all classes of service may be used to make up the minimum day. This proposal is somewhat similar to one of the proposals on the Atlantic and Central Regions, and our reasoning there should apply here. In our opinion, there is reason and a sound basis for the rules requiring terminal delay pay, but such pay in our opinion should not be a premium payment which would be paid the employees over and above all other guarantees, but should be for payment for services rendered to the Company generally. Therefore, in all reason this type of payment should be included in and used to make up the minimum day required. We would, therefore, allow the Company's request and recommend the amendment accordingly.

The Company's fifth request is to provide that freight men on extra passenger trains be paid at passenger rates. There is no doubt that there is much to be said for both the Union's and the Company's point of view. There is no doubt, too, that any rule on this subject can have certain cases where an injustice is done to the individual. It is our duty here to make a finding that will do justice to all the parties, or at least to a majority of the parties, on an overall basis. Freight rates are considerably higher than passenger rates, the reason being that the passenger mileage rates are calculated on a higher rate of speed than are the freight rates. The passenger operator is expected to travel further than is the freight man in the same day, and therefore the rate is calculated accordingly. When a freight man, then, is temporarily transferred to passenger service, if his wages are calculated on freight rates, the transfer is a most desirable type of transfer for him as he runs the extra mileage not only at the higher freight rate, but at a much faster speed, and therefore he collects a much greater remuneration for the particular run. This does not seem to be fair to the Railway, or even to the regularly assigned passenger man. Usually where a party is transferred temporarily and for convenience of management from a better paying job to a poorer job in industry, the job rate should not apply and the employee should carry with him his personal rate, because it would mean a reduction in the take-home pay per day

of the transferred employee if done otherwise; but here, by reason of the calculation of the differentials, it would mean no such reduction. Therefore, in our opinion, we feel that the Company had made out a case and the Union should be prepared to agree to the amendment.

The Company's sixth proposal is a request for payment of *pro rata* rates to yard helper when required to perform a second tour of duty as a yard foreman within a twenty-four hour period. This request is almost identical with the request made on behalf of the yard helper counterpart on the Atlantic and Central Regions. Our reasoning with regard to the disposal of that request should apply equally to this request. We would, in general, not be prepared to alter the rule which is Article 1 of the Yardmen's Agreement applying to the Western Region, but we would add a footnote at the end of the said Article in the following form:—

> Nothing in this agreement shall obligate the Railway to call a spare yardman who would be entitled to payment at overtime rates when there are available spare yardmen who could work on *pro rata* rates.

The Company's seventh request is in the same form, but deals with yardmen who are required to take a second tour of duty within a twenty-four hour period. The recommendations made in connection with the Company's sixth proposal apply equally to this proposal. The Article affected is the same one as affected under the disposal of the sixth request, and therefore the amendment which we would add to the Article in the form of a note is the same amendment or note that we have suggested to be added with regard to the said disposal in the sixth request.

Dated at Picton, Ontario, this 9th day of December, A.D. 1952.

(Sgd.) Wilfrid S. Lane,
Chairman.
(Sgd.) T. R. Meighen,
Member.

Report of the Hon. A. W. Roebuck, QC

It is with regret that I must report my inability to join in the Report of the Chairman, His Honour Judge W. S. Lane, and concurred in by Mr. T. R. Meighen, QC. There are a number of statements in the Chairman's general remarks which I do not approve, and there are a number of recommendations, particularly that with regard to wages, with which I emphatically disagree.

The Brotherhood has asked for an advance in wages of 35 per cent across the board, and has supported their request on the grounds of an increase in the cost of living, including a considerable burden of taxation on the one hand, and an increase in the productivity of their work and of Canada generally on the other hand, and they point out that the wages of the classes of employees which they represent have not advanced proportionately to the wages of other classes, and with wages in industry generally. The cost of living has risen since the last increase in wages given to these men in December 1950, when their last agreement was signed. At that time it stood at 171·1, and it increased during the period of the agreement to 188·7 in April 1952, when the Trainmen's new agreement should come into effect, an advance of 10·3 per cent. The increase in taxation to which the railroad has been subjected in recent years has been passed on by the Railway in increased passenger and freight rates to the general public. This is the rule with regard to taxes upon enterprise and production generally in both manufacture and commerce, and the men claim quite naturally that taxation is an element which enters into the maintenance of their standard of living.

The Brotherhood claims that the workers in the Railway industry are entitled to share in the increased productivity of the business in which they are engaged as well as in the industrial progress of the nation as a whole. It is common knowledge that the Railways are hauling much more freight tons behind each locomotive than was possible a few years ago, and the introduction of diesel traction power will continue the trend upward sharply in the future. In 1939, the total value of goods and services produced in Canada amounted to 5·7 Billion Dollars; in 1950 it was 18·1 Billion Dollars, more than three times the 1939 figure, and in 1951, the figure is estimated at 21·2 Billion Dollars. Making all allowances for the increase of prices and the growth in population, it is stated that the amount of goods and services available for each person in Canada have increased from 1939 to 1951 by 52 per cent. The Brotherhood estimates that the standard of living could be half as high again in 1952 as it was in 1939 measured in goods and services available. The Trainmen believe they are entitled to share to some extent in this progress. The Union was able to show increases in real wages to industry generally considerably in advance of the increases obtained by trainmen.

In reply, the Railway management pointed out the increase in the operating ratio from 91·05 in 1950 to 94·37 in 1951. The difficulties encountered by Canadian

Railways in meeting their financial obligations are serious, but it is not a good reason why their obligations should not be met. The Railway's balance sheet is not an element in the cost of equipment and supplies, and, while the employees of the Brotherhood are vitally interested in the success of their industry, they must not be expected to work for a lower rate of wages than is justified by the facts. The Railways are Canada's national life line, and have throughout their history been a concern of the Dominion Government. They are essential to the economy of Canada, and those in authority must take such steps as will enable them to pay their legitimate expenses.

My fellow members of the Board concede that an increase is justified under all the circumstances, and they have recommended an advance of 12 per cent. I disagree only as to the amount. The Brotherhood has asked for 35 per cent, and weighing all the factors, and after a very extensive investigation, I am of opinion that the circumstances warrant and justify an increase of 20 per cent. The average basic rate of all employees of the Canadian National Railways within the membership of the Brotherhood of Railroad Trainmen, as exhibited in their current agreement, is $1.29 per hour. The increase that I have suggested would raise the rate to $1.54·8 per hour, which is certainly not excessive when compared to wages paid in industry generally. It must be borne in mind that the members of the Brotherhood of Railroad Trainmen are Conductors, Baggagemen, Brakemen and Switchmen in Yard Service. They are the men who operate the trains under all conditions of hardship and hazards. When one considers the exposure to which many of them are subjected, the irregular hours, and their hours away from home, and the responsibilities which they carry, it seems to me that the rate suggested is thoroughly justified.

The men have asked for an Escalator Clause in their prospective agreement, that is an increase in wages to offset increases in the cost of living should they occur. According to the decision of the Chairman and Mr. Meighen as set forth in the majority report, this is decided against on the ground of difficulty in bookkeeping and budgeting, which make it neither feasible or possible at this time. The writers, however, seemed to have overlooked the fact that the Escalator Clause, or a cost-of-living bonus, is in effect on every Railway in the United States benefiting more than a million employees, and including those Railway lines operating in the United States under the jurisdiction of both the Canadian National Railways and the Canadian Pacific Railway. Not only so, but a cost-of-living bonus was in effect at the instance of the Government of Canada itself, on the Railways of Canada during most of the years of the recent Great War. There is much to be said in favour of the Escalator Clause for it gives security against fluctuations in the cost of living and has been very widely used for this purpose in railroading and other industry and has not been found economically unsound.

The Brotherhood asks for a 40-hour week in Yard Service only, and the Chairman admits that the five-day week is becoming a pattern in industry in this country. That is so, and the rule is in effect in Yard Service in the United States on many of the major Railways of that country, for instance, the Pennsylvania, New York Central, Ohio Lines, Northern Pacific, Great Northern and other leading railways. The non-operating employees of both Canadian Railways now have it and as well the men who work in conjunction with the Yard Service employees, men who actually operate the cars, such for instance, as those who couple hose, inspect cars, repair cars, track men, maintenance forces and so forth, complementary to the Yard Service. All hourly paid men on the staffs of both Railroads of Canada are on a five-day week with the exception only of the Yard Service employees. They are the last ones to be included, and they are the very class who need it most. The work of the Yardmen is to be distinguished from other Railway trades in that they tramp about on foot, climb on and off cars, wind brakes and endure hard physical work in the open in all conditions of weather and in three shifts throughout the entire 24 hours of the day. I personally endorse the principle. Its application is coming inevitably, and the Railway management would do well to accept it graciously and co-operate in making it effective by the 1st of October 1953.

The wage recommendation in the majority Report makes the increase recommended conditional upon the acceptance by the employees of certain rule changes asked for by the employers and recommended in that report. I do not approve such a proceeding, and I am quite confident that the members of the Brotherhood will not willingly accept changes of rules which they consider to their advantage for any wage or other consideration. The rules in question must stand or fall on their own merits. It

would be a mistake to consider them subject to the compulsion of financial considerations.

I shall deal first with the Company's request and in the order adopted in the majority Report, commencing with the Atlantic and Central Regions.

The first request in this district is for the elimination of all rules providing for payment of the long established monthly guarantee in all classes of service. Such a change would upset the whole way of life in Canadian Railways, and would produce conditions absolutely chaotic. The majority Report rejects the suggestion and I agree with the Chairman and Mr. Meighen.

I also agree with the majority decision in rejecting the Company's request that Freightmen called for temporary service on passenger trains be paid as Assistant Conductors and at a lesser rate than they are paid in their own jobs. When the Company for its own convenience assigns work irregularly and for short terms with resultant disturbance of hours, they should not couple with it an enforced reduction in take-home pay.

In its third request, the Management wishes to eliminate in the rules the guarantee of 100 miles or 8 hours' pay to regularly assigned way-freight work and construction trainmen. For obvious reasons, I join with the majority of the Board in rejecting this request.

The Company wishes it made clear that management is not obligated to call a spare Yardman who would be entitled to overtime rates when there is available a spare yardman who is entitled to *pro rata* rates only. This is the present practice and the Brotherhood has no objection to making it unmistakably clear in the rules, and I join with the majority of the Report in recommending accordingly, but that otherwise the present Article 93 in its present form be maintained.

With regard to the Company's fourth proposal, I join in the majority Report which rejects the request to amend the Yard overtime rule which requires the payment of time and a half to a Yard helper when required to perform a second tour of duty as Yard Foreman within a twenty-four hour period. It may be well made clear however, if desired, that the Company is not required to call a spare Yardman as Yard Foreman to such duty who would be entitled to payment of overtime rates when there is available a spare Yardman who is entitled to *pro rata* rates only.

Company proposal No. 6 is a request to revise the current rules to provide that initial and terminal delay in all classes of service may be used to make up the minimum day. The majority Report agrees to this, and I disagree. After many years of negotiations and experience, there has been established standard of payment for railway services, and this proposal to make initial and final terminal delay time payment a part of the guarantee is but another method of reducing the established rates of pay. This is not a time for reductions in pay, either directly or by subterfuge, when this entire Board is unanimous on the necessity and justice of an increase in pay.

Company's proposal No. 7. Management wishes to eliminate the Rule providing for additional payment for switching en route. Trainmen are paid per trip on a time and mileage basis, whichever is the greater, from the passing of the outer switches on leaving the initial terminal until arrival at the final terminal. This is a long established rule. Obviously if the crew is required to do switching en route, the time and mileage basis is upset to the disadvantage of the Trainmen. If the universally accepted time and mileage basis is just and equitable, it seems clear to me that additional payment for additional service is not unreasonable. I would therefore reject this request, and I am pleased to note that the majority Report agrees with me.

I now turn to the Company's request on the Western Region.

It has long been recognized that the difference in operating conditions on the lines west of Edmonton are more difficult than on the lines east of Edmonton, due to mountain terrain. There are the hazards of rock and snowslides, the very existence of snow sheds, tunnels and curvatures, to say nothing of steep embankments and great heights which all add to the dangers and have resulted in many fatalities which have occurred in the past. These differences in operating difficulties have been recognized by an almost trifling differential in wages of 16 cents per day additional on the Western section. This the Company asks to abolish. I agree with the majority that it should be maintained, but not for the reasons specified in the Report, but rather because I am of opinion that the differential is justified.

The majority Report rejects the Company's second request which is to eliminate all reference to daily and monthly guarantees. This would be a simply monstrous change to enforce upon the Railway employees of this country, and I agree with the majority Report in rejecting it.

There is an old Rule on this section of the Railway that regular way freight trains

will not be double headed, except where there is but one freight train each way daily and in cases of storms, and in which even the maximum number of cars is fixed at thirty-five to the train. The Company wishes to alter this maximum to not exceed the weight of the largest engine attached, and this I think reasonable. I agree with the majority Report providing the phrase, "the weight of the largest engine attached", means the rated capacity of the largest engine attached.

The Company's proposal No. 4, is to amend the Rules so that initial and final terminal delay in all classes of service may be used to make up the minimum day. This is the same proposal as I have already dealt with under Company's proposal No. 6, of the Atlantic and Central Regions, and I reject the request for the same reasons. The majority Report is prepared to grant the Company's request that freightmen required to run on extra passenger trains (that is not regularly assigned passenger trains), should be paid at passenger rates, but the Report makes clear that the concurrence is based on a misconception of the facts. When a freightman relieves a passenger man, and runs the full passenger run to the passenger terminal he is paid now at passenger rates, but when a freightman is required to operate on an extra passenger train he is not allowed by the Rules to pass the freight terminal. This Rule is for the protection of the Company in order that freight workers shall not be scattered in all directions; it is necessary that management retain their staffs in their various divisions. Now the freight terminal provides shorter mileage than does the passenger terminal, and in consequence were the freightman paid at passenger rates for the shorter run, he would on the average lose approximately one-third of mileage paid for whenever so called. I would reject this request.

The Company's 6th and 7th requests are similar to Management's 4th and 5th request on the Eastern Region, and they are unanimously rejected on the Western Region for the same reasons as previously expressed.

There is one more point in the majority Report with which I must deal, and that is the suggestion that there can be no retroactivity in the Board's recommendation because of an agreement between the parties. The agreement to which the Report must refer is that dated the 4th day of February 1932, which reads in part as follows:—

> It is agreed that in the event of any disputes arising in future in respect to proposed revisions of any or all of the agreements which shall be referred to Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act retroactive effect shall not, except by mutual agreement, be given to the recommendations of such Boards beyond the date the disputes are finally dealt with by the Boards and copies of their reports have been delivered through the Registrar of Boards of Conciliation and Investigation to the parties affected.

This agreement also provided for a reduction of ten per cent in the pay of the classes of Railway employees of both the CNR and CPR Companies, and it is quite obvious that "the agreement" to which reference is made were the agreements then in effect between the parties. The agreements in question were to run for a considerable time, but they have long since passed into oblivion. Not only so, but the paragraph above quoted refers to "Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act." That Act gave way to the provisions of Order in Council, P.C. 1003, which in turn was succeeded by the Industrial Relations and Disputes Investigation Act assented to on the 30th of June, 1948, Section 73 of which is in these words: "The Industrial Disputes Investigation Act is repealed." A provision with respect to Conciliation Board under an Act long since repealed, and in reference to agreements long since expired can have no reference whatever to the present relations between the Canadian National Railways and its employees in the year 1952.

Not only so, but agreements which have been entered into between the Company and the Unions in recent years have been made retroactive by consent of both parties. No objection was made or even suggested when on the 3rd of March 1951, an agreement was signed which was retroactive to the 1st of December 1950. This is the very agreement which we are now proposing to revise, and which is referred to in the majority Report in reference to the cost-of-living index matter.

In my opinion any recommendations made by this Board should be retroactive, so far as that is physically possible, to the 1st of April 1952, when the current agreement expired.

Dated at Ottawa, Ontario, this 12th day of December, A.D. 1952.

(Sgd.) A. W. Roebuck,
Member.

Report of Board in Dispute between

Canadian Pacific Railway Company
and
Brotherhood of Railroad Trainmen

The Conciliation Board appointed in the above matter, consisting of His Honour Judge W. S. Lane of Picton, the Hon. Senator A. W. Roebuck, QC, of Toronto, and Mr. Norman L. Mathews, QC, of Toronto, has met the parties at the City of Toronto on August 12, 13 and 14; on September 8, 9 and 10; on September 16; and on November 4, 1952. In addition the Board met in executive session in the City of Toronto in connection with this matter on the 28th day of October 1952.

The parties were respectively represented as follows:—

For the Company—

Mr. E. S. McCracken, General Manager Prairie & Pacific Regions, Chairman of Negotiating Committee for Company,
Mr. I. J. McNaughton, Asst. Manager of Personnel, Member of Negotiating Committee,
Mr. A. M. Hand, General Manager Quebec Central Railway, Member of Negotiating Committee,
Mr. J. Shepp, Superintendent Vancouver Division,
Mr. W. M. Russell, Superintendent Winnipeg Terminals Division,
Mr. H. Shoebridge, Assistant to Vice-President, Personnel.

For the Union—

Mr. A. J. Kelly, Chairman of Negotiating Committee,
Mr. L. C. Malone, Secretary, Negotiating Committee,
Mr. C. W. Stanley, Statistician,
Mr. D. Paltiel, Statistician,
Mr. P. S. Rody, Member,
Mr. P. R. Lewis, Member,
Mr. T. D. McLaughlin, Member,
Mr. R. H. Morrison, Member,
Mr. W. G. McGregor, Member.

The case on behalf of the Union was conducted by Mr. Kelly and Mr. Malone, with the assistance of the other members of their Committee and particularly Mr. Paltiel, one of their technical advisers. The case on behalf of the Company was conducted, as directed by Mr. McCracken, by himself and the other members of his Committee.

The requests made by the Union were requests which could be classed as economic in nature. They consisted of a request for wage increase of 35 per cent across-the-board, an escalator clause, a reduction in hours with maintenance of take-home pay for yardmen, a request for a seniority change covering yardmasters, a rule change covering yardmasters' duties, and a reclassification of the railway yards.

The Company asked for three basic rule changes: A revision of the starting time rule for yard crews, extension of switching limits, and a request that *pro rata* rates be paid for second shift in yard service starting within a twenty-four hour period.

The issues were very thoroughly canvassed by both parties. The Union went to great lengths to show the necessity for their various requests, particularly with regard to the request for wage increases. They attempted to show that there were many grounds which would entitle them to varying amounts of increase, but that when taken in conjunction showed, in their view, that their request for 35 per cent increase was most reasonable. They advanced many arguments supporting their escalator clause, as well as their demand for a 40-hour week with maintenance of take-home pay for yardmen. In the latter connection, they pointed to the experience on American railways, which they felt was the place to look for a proper comparison on this issue.

The Company, on their part, supported their requests by attempting to show that the rules concerning which they were asking for amendment or elimination had been in effect for many years, some since 1919, and had grown antiquated. They had by changing conditions become burdensome and expensive and, in the opinion of the Company, generally detrimental to the efficient operation of the Railway. They went most thoroughly into the operation of each rule, and attempted to show that the rules in question had very little foundation in reason, and were merely a growth which had over the years attached themselves to the agreement between the parties. There was considerable rebuttal evidence given by the Company with regard to the cost factors involved in the various monetary requests of the Union. There

was considerable stress given to the fact that, if the Union request for a 35 per cent increase were granted, the cost factor to the Railway would be prohibitive, and that a reduction of hours for yardmen would seriously aggravate that cost, without considering any other requests. In addition, the Company went very thoroughly into the increase in the cost of living, and pointed out that, taken from the date of the last settlement, it would be substantially less than 6 per cent rather than the 10·3 per cent which was set out by the Union.

The position of the Company and its ability to pay, by reason of its fixed rate structure, was thoroughly canvassed, and generally the Company took the position that, while the men were entitled to be given justice, they were not entitled to receive unreasonable increases at the expense of the general Railway operation. The Company urged the amendments which they requested be considered favourably, as they felt that they tended to go to the whole issue of the efficient operation of the Railway, and that that could not be carried out if the present archaic rules, of which these were some, remained in effect indefinitely. They asked that the Railway be put in a position where it could successfully compete in the transportation field.

All issues were competently met and thoroughly discussed by all parties, both by way of defence and by way of rebuttal on defence, so that the Board would have the assistance of everyone's point of view before we made any attempt to formulate our report. After the issues had been thoroughly placed before us, and after the Board had met in executive session to correlate our thinking, the Board met the parties and made a serious attempt to see if there was any possibility of getting the parties on some common ground towards a settlement. It was found that there was no such possibility, and the Board, therefore, found itself in the position of making our findings and formulating our report. We do this with the feeling that, while there are some serious differences between the parties on the issue of wages, and on some of the other issues for that matter, the parties will, after having received the report, find it possible to renew negotiations and work out a settlement along the lines set out in this report.

Generally speaking, this Board does not consider that there is any special sanctity to be found in a set of rules merely because they have been in effect a great number of years. Neither are we able to find that the fact that those rules originated from the so-called MacAdoo award makes them any more sound in principle than any other rule. Conversely, we are not prepared to find that the fact that these rules came to Canada in the MacAdoo award from the United States should make them any less acceptable to us. In our opinion, every rule or term of any contract must justify itself by its own terms, and in the net analysis by its result in operation. These rules have, in some cases, been in effect for some number of years. This fact must be considered when we come to assessing the value of the particular rule. If they had not been relatively satisfactory, surely they would have been changed during the years. On the other hand, conditions do change from time to time and old rules do have a tendency to become obsolete, antiquated and no longer useful. Some may become definitely harmful and a hindrance. If this be the case, we feel that it is in the interests of both Management and the Employees that these antiquated, harmful or damaging rules should be changed, whether it be at the request of the Union or at the request of the Company. This must be so, even if a number of persons large or small are adversely affected by the change. We must remember that the interests of each employee by and large must be identified with the common interest. No individual has a higher right than the greatest number, and therefore no special group has a right to maintain a rule which may grant special privilege, but which in giving that special privilege does so at the expense of the larger group. It seems to us that the individual interest must be governed by the group or overall interest. Following this thought, it seems to us that the only way by which the interests of the employees generally can be maintained is to see to it that the Railway operates efficiently. In other words, the interests of both Management and the Employees must stem from a healthy operation of the Railway. This must be without exploitation on either side. The Railway must be allowed to operate efficiently, while the employees must be paid and provided with conditions of work which will recognize the dignity of the individual as well as the real contribution which he gives to the operation of the Company. In addition, we must remember that the welfare of this country as a whole is more than we wish to admit dependent upon the Railways. The welfare of the Railways, in turn, depends largely on co-operation between its employees and its

management. It follows, then, that the disputes involved in this Conciliation must be worked out, not in the interests of the Company, not in the interests of the employee, but in the interests of both parties without any bias towards either. We have approached the issues with these thoughts in mind.

On the question of the request for wage adjustments, which will be specifically referred to later on in this report, we feel that we must approach the problem bearing in mind the following factors, in addition to those above set out: The men, in our opinion, have made out a case for some increase in their wage rates, if we are prepared to concede that the cost of living with its related factors has a bearing on wage rates. It would be well to remember, in this connection, that cost of living as tied to the index, or any cost of living increase however measured, where it is present with an inflationary trend carries with it where there is no escalator arrangement a cumulative loss to the worker, or for that matter to the salaried employee. In addition, and as a co-existent factor in the question of cost of living, but not measured by any index, is the question of direct and indirect taxation, which has been and is continuing to mount, with its impact upon the income of the individual and its resultant reduction in the standard of living of that individual. In this connection, it might be well for us to remember, however, that the Railway trainmen are no different than is any other segment of society in so far as the impact of taxation is concerned. All these factors may well be considered when assessing the issue of the rising cost of living and how it affects the individual in relation to an increase in wage which he may or may not have made out. There are other arguments advanced in this Conciliation dealing with the increase of productivity of the individual trainman and the collateral arguments that the trainman is entitled to his share in the increase in the national production or the increase in the amount of goods and services available to each person in this country.

We think most of us agree and must agree that the cost of living with its correlated factors is a matter of great importance to any person living on a fixed income, whether it be an hourly wage or a salary, and that the individual who can point to an increase in the cost of living without a like increase in his wage has, to some degree, made out a case for adjustment. How far that wage adjustment should go depends on how far back one is prepared to go in making comparisons, and how many factors recited above are to be considered to have an impact upon the wage rate.

The Board was not particularly impressed by the argument that the individual employee had a claim to increase in his wage rate to provide for the purchase by him of his share in the goods and services made available by the increased national production. There is no doubt that indirectly every person has a stake or share in that increased national production and the goods and services made available thereby, but we feel that this argument does not directly enter into the wage problem as a basis for increase, and that the share in those goods and services is automatically covered in any scale of living or in any increase in wages which may be measured by any general basis of comparison. To utilize the increase in national production as a basis or argument from any other standpoint seems to us to be fallacious, because it is not so much national production that counts in this regard as does national consumption, and we have no evidence of increase on that basis. Even if we had, however, it appears to us that it is going too far to say that this is a separate element involved in wages which must be considered, because we feel it is a matter which is automatically taken care of by the economy of the country. The Board was also not impressed with the argument that there had been a significant increase in the productivity of trainmen. The evidence did not seem to completely bear out this thesis. It may be that there is some truth in this statement, but once again it depends on where the base of comparison is taken. If we compare the present to certain periods of slack operation of the Railway in the past, it may be that by comparison the trainman is producing more now than he did then. Such a comparison, however, does not seem to us to be valid. We feel that the only fair comparison would be between relatively equal periods where some technological change such as introduction of diesel power might possibly have been the basis for a change in work load. Under those conditions, there might have been a change in productivity which would have to be recognized. There was no evidence before us here that there was any such factor involved. Nevertheless it is true that all these factors must be considered, and must be weighed when arriving at a figure which would be a proper figure upon which to fix the rates for the Railway at this time.

There is an additional factor, however, which must be considered. The wage rates were fixed by agreement on April 1, 1951, at which time the last known index figure was that of February 1, 1951, of 175·2. It would seem that there would be much to be said for the argument that, when two parties sit down and agree upon a rate, the resultant rate is usually a fair one. Such agreement, therefore, should at least leave room for the argument that we should not go back of February 1, 1951 in making our comparisons for wage increase. Were this done, and were we to take into consideration the present index of 184·8, we would probably find that the amount of increase indicated would be substantially less than 6 per cent. There is another factor which must be considered in our thinking upon this matter. It is to be found in settlements with the Locomotive Engineers and the Brotherhood of Railway Conductors. It is true that these settlements, except in so far as they may lend some confirmation to the basic argument of rate structure, should have no effect upon this Board because those organizations deal for their own membership, and in no sense are or should be allowed to set the bargaining for other groups. The Company also alleged at the hearings that they had offered the Brotherhood of Railroad Trainmen during negotiations a 9 per cent increase, which was refused and subsequently withdrawn. The Company now takes the position that, under present conditions, they are not prepared to make so high an offer.

There is an additional and very important factor involved in this wage issue. It might be considered from the aspect of ability to pay. Without question, the operation of the Railways in this country is marginal. Their rate structure is a controlled structure, and one which is rather judiciously guarded by the Board of Transport Commissioners. This fact has been borne out by the recent decision of that Board refusing an increase in freight rates to the Railways. This refusal, however, is not the last word and cannot be considered to be the whole answer because, if other factors in the future are put before that Board on another application, it may be that they in their wisdom may deal differently with it. The question which is far more important for us to consider in the matter of this Conciliation is how much rate increase would be possible for the Railways to add to their present rates without invoking the law of diminishing returns and crippling the operation of the Railways from a competitive standpoint. There is no doubt that other forms of transport take a great deal of the business now, and if the rates were increased substantially, those other forms of transport would take an even greater share of that business. Such a result could have a disastrous effect upon the Railway employees themselves. It has been said with truth that the Railway employees should not be asked to subsidize the operation of the Railways in the interest of the country at large. With that statement every member of this Board agrees. It has also been said that it is the special duty of the federal Government of this country to see that the Railways operate by whatever means may be necessary to that end. The statement is true in so far as it goes, but it cannot be expected that any government could or would be justified in subsidizing a Railway operation for the express purpose of putting the Railway employees in an especially favourable position in relation to their fellow workers in this country. We must approach the problem from the standpoint of doing justice to the men, but at the same time we must do justice to the Railways and to the country at large.

This Board, after hearing all the representations and bearing all these factors in mind, are prepared now to find that there should be a wage increase across-the-board at this time of 12 per cent. In making this recommendation, we point out that if computed on the average of basic wage rates ($1.29 per hour), it would mean about 15½ cents per hour, but if calculated on the average hourly earnings ($1.66 per hour) as shown to us by the Union, it would mean 19·9 cents per hour. In view of the fact that earnings are affected in reality by any recommendation, the latter figure is the effective one in fact. While this amount is considerably higher than the amount indicated by the present cost-of-living index, nevertheless when the other factors are considered, we feel this increase is indicated. We do, however, make this recommendation conditional upon the acceptance by the employees of certain rule changes which we are recommending in this report, because we feel that in part some of the increase must be earmarked for the purchase by the Railway of certain changes in the rules. Certainly the amount of our wage recommendation would not be as high if it were not coupled with the rules recommendations.

This wage recommendation is made at the instance of the Chairman, with the somewhat reluctant concurrence of Mr. Mathews. Mr. Mathews had felt that a

9 per cent increase would be more in accord with the realties of the situation. but to get an effective report of this Board and to avoid a disagreement, bearing in mind that there can be no retroactivity involved in this recommendation because of the agreement between the parties shown to us at the sessions of the Board, he has decided to concur with the Chairman in making this recommendation.

On the question of escalator clause, we do not feel that we can make a recommendation at this time for such a clause in this contract. We base our findings, in this connection, on the fact that, in view of the complicated system of payment in the Railway set-up, an escalator clause would be almost an impossibility from an administration standpoint. It could not be expected to operate even from the standpoint of the most optimistic except on a half yearly basis by reason of the complicated pay system of the Railways. We recognize there is much to be said for it if the cost of living is a decisive factor in the wage adjustment. On the other hand, in our opinion there is more to be said against it from a practical standpoint, particularly when in fairness any cost-of-living adjustment, if accepted on principle, should have to go up and down. This, we recognize, would not work out in a satisfactory manner, and we would therefore feel that the factors against it are so great and the benefit of it so doubtful at the present time, that it should not be recommended.

On the Union's request for a 40-hour week for yardmen, we recognize that the 40-hour week is more and more becoming a pattern in industry in this country. We recognize, too, that the 40-hour week for yardmen is in effect on certain American railroads, but we bear in mind the fact that those railroads are by no means a majority. Even where it has been placed in effect in the United States, we believe that it has been done without a complete maintenance of take-home pay. We do not feel that without this maintenance factor it would be acceptable to the men in Canada. In addition, we wish to point out that the conditions in Canada are not the conditions in United States, and this applies most particularly to railways, because here with our sparse population and our long rail lines the conditions of operation cannot even be compared to the operations across the border, where the population is dense and the railways serve a much greater population per mile of line. Therefore, in our opinion a comparison between conditions here and there, in most instances, is not valid. From the evidence both for and against, we recognize that no doubt it could be done, but in our opinion the cost factor would be prohibitive, particularly in view of the fact that our railway operation is at best marginal. From the evidence, we understand that the reduction in hours as requested, with a maintenance of take-home pay would cost this Railway an amount which is completely out of line to the benefits of the change. We, therefore, do not recommend that there be any change for yardmen in their hours at this time.

The union has made a number of requests for rule changes, the first one with which we propose to deal being in connection with baggagemen and trainmen handling Government mail. The request which applies to Eastern lines is that trainmen and baggagemen who are required to handle Government mail be paid a minimum of $8 and a maximum of $25 per month, rates to be set according to the number of points serviced and the number of bags handled on runs, and the arrangement to be made between the General Manager and the General Chairman. The suggested amendment contains certain terms which merely go to set up the machinery under which this can be carried out. The Company, of course, objects to this, taking the position that the men are paid for their time and whether they handle Government mail or some other baggage should be of very little difference to the men involved. We would be inclined to agree with the Company on their position, because very definitely, whatever the rate may be that is set for baggagemen, the Company is paying for the time of the individual concerned, and therefore is entitled to his full service whether that be carried out in handling Government mail or some other form of traffic. The principle behind the issue seems to be unworthy of too much consideration from the standpoint of principle, but there is a practice on some railways in this country whereby some such payments are made. We do not see why the Canadian Eastern Region should be in this regard placed in a different position than is the Canadian National Railways, and for that matter from the Canadian Pacific Western Region. The request here, however, appears to be larger than the allowance made on the CNR or on the CPR Western lines for like service. We would therefore, be prepared, taking all this into consideration, to recommend that the same arrangement be made with the baggagemen and trainmen on the CPR Eastern lines as exists on the CPR Western

lines, and that the terms of their contract on this point be written into this contract.

The next request by the Union for rule change is a request for payment of terminal delay, both initial and final, on the Eastern Region. We do not propose to go into this requested rule in detail. On principle, we see no reason why initial and final terminal delay should not be paid unless there is some factor involved which would make it unfair. In this instance, there appears to be a factor which should be considered. It is paid on the Canadian National. In spite of this fact, the Canadian Pacific trainman, by reason of a different calculation of wage rates, makes a slightly higher take-home pay than does his counterpart on the other Railway where this is paid. It was suggested to us that the reason it is not paid is because the men at one time elected to take the rates without the initial and final terminal delay, and that actually it is figured in those rates. This would appear to be correct by reason of the comparisons. If this is correct, then we would be doing an injustice were we to recommend that it be paid at this time. We, therefore, do not recommend that there be any change in this regard.

The Union has requested that extra yard engines in service five days, the starting time of which has not varied more than one hour and thirty minutes on any one of the five days, will thereafter be made a regular assignment and manned as such. It appears to us that, in view of our recommendations with regard to the starting time of yard engines, which will be made in this report on the Company's request, that this request of the Union should be granted. If, on the other hand, the parties are not able to agree when they come to negotiations that the starting time restrictions generally will not be removed as we have recommended, then it would be iniquitous in our opinion that this rule should be changed as herein recommended. On this basis, therefore, and conditional upon the acceptance by the Union of the recommendation on the removal of the starting time rule, we are prepared to recommend that the Union's request for alteration of this rule be granted.

The Union has requested a change in Rule (S) of the Yardmen's Agreement, which as we see it does not make any substantial change. It does limit the period within which, after booking rest, a yardman may be called to duty. Under the circumstances, we feel that this is a matter which should be settled by further negotiations, and not one with which we should interfere by recommendation at this time.

The Union has requested, in addition, that the Yardmasters' agreement in so far as it relates to rules be amended on the question of seniority so that it would read as follows:—

> Seniority. After April 1, 1952, yardmen working as part time yardmasters, who have accumulated sixty days as such, will be placed on the yardmasters' seniority list and will thereafter continue to accumulate seniority as a yardmaster and will be given the privilege of bidding on all bulletined positions. They will take their seniority from the date they qualify under this rule, and in the event that more than one qualify on the same date, seniority in the service will govern.

The Union, in making this request, has taken the position that many yardmen are used from time to time as temporary yardmasters, and that for some reason they never get the opportunity to become in fact yardmasters, as they never have the chance to bid in a regular job as such. The Company, on the other hand, takes the position that the question of promotion to yardmaster is a matter of discretion on the part of management, and that men might be satisfactory to do the job temporarily, but could never qualify to do it permanently. After considering the matter, it seems to this Board that the Company is adequately protected by the sixty day period. If they feel that certain men cannot qualify to become yardmasters, they do not have to use them as temporary yardmasters, and it seems to us that if they do use them for sixty days they must have confidence in them to do the job. If they have such confidence, we do not see why these men should not have the right to claim a permanent job. There is an additional factor, however, which was raised, and that was that not all yardmasters are picked from yardmen and that certain other Railway employees sometimes are transferred to the yard as yardmasters. We see no reason why this should not be allowed to take place. Therefore, we are prepared to recommend that the Union's requested rule change be granted, after the word "yardmen" in the first line has been struck out and the word "employees" written in. The suggested rule would now read:—

> Seniority. After April 1, 1952, employees working as part time yardmasters, who have accumulated sixty days as such, will be placed on the yardmasters' seniority list and will thereafter continue to

accumulate seniority as a yardmaster and will be given the privilege of bidding on all bulletined positions. They will take their seniority from the date they qualify under this rule, and in the event that more than one qualify on the same date, seniority in the service will govern.

The next request by the Union in connection with yardmasters is a request that general yardmasters, assistant general yardmasters, yardmasters and assistant yardmasters will not be allowed to throw switches, give any signals except to prevent accident, make up or bleed off cars, check or weigh cars, or perform any duties which come within the scope of other classes of employees. It is urged in support of the request for this change that, if yardmasters or their superiors step in and do these things, they are creating a safety hazard. The Railway does not agree that this is the fact, and it seems to us a rather unusual proposition. It would seem to us that the opposite would be the more likely to be the truth, and it is certain that if such restrictions were placed upon the yardmasters there would be a detraction from the authority of the men in charge of the yards, which would seriously affect their prestige with their subordinates, which is so essential for them to carry out properly their duties in the operation of the yards. We would, therefore, refuse to make a recommendation as requested.

The next request wtih regard to yardmasters is that there be a change in the classification of yards. This, in our opinion, is a monetary request and as such has a significant cost factor. In addition, unless there was something shown which would prove to us that there is a basis for a re-classification of the yards, it seems to us that we would be exceeding our duties to interfere. In our opinion, primarily it is the duty of the Company to classify its system, whether it be a matter of yards or some other operation. The Union, of course, has the responsibility to see that this classification in so far as it affects the employees has been properly done. Nothing was shown to us in the evidence which would, in our opinion, show that the action taken has been improper and, therefore, there seems to be no basis for a recommendation for change. We, therefore, do not recommend that there be any change at this time in the classification of the yards.

The Company has made some requests for rule change. Their first proposal is that the restrictions on starting time of yard engines be removed. At the present time, yard crews may be started only as laid down in Rule (E) on the Eastern Region. This rule is broken down into seven subsections or clauses. The first section in the Company's proposal would be maintained, as it is merely a statement of principle. The second and third sections would be amended to make it possible for the crews to be started according to the exigencies of the service, but at regular times. The difficulties appear to arise by reason of the fact that on regular assignments in continuous service the starting times are limited under the present rule to the hours between 6.30 a.m. and 8 a.m., 2.30 p.m. and 4 p.m., and 10.30 p.m. and midnight. Where the shifts are continuous but only two shifts are worked, the periods under the present rule are limited to any of the periods above set out in paragraph 2. The Company takes the position that these restrictions hamstring the effective operation of the yard in that a crew may not be needed and may not have any work to do at the time that it is required that they be started, if they are to be available when there is work for them, and yet once the work is available there is too much for it to do before the end of the shift. The result, according to the Railway, is duplication and extra assignments, and therefore does not contribute either to the economic or efficient operation of the Railway. The Union against this takes the position that these hours are reasonable hours for the convenience of the men, and that if the work is properly spaced it should have no detrimental effect, and it is because of inefficiency in management that any difficulty arises under the present rule. It appears to us that, in spite of the position taken by the Union in regard to this rule, there must be some loosening of it if the Railways are to continue in efficient operation. The employees are paid and should be well paid for the service they render to the Railway, but at the same time it cannot be expected that the Railway should be required to pay for time which cannot be utilized. We can see no particular sanctity about the starting hours which are laid down in this rule. There is no doubt that every man is entitled to regularity of employment and some regularity as to when his time to work and his time off shall come, but whether that time be 6 a.m., 8 a.m. or some other time should make little difference to him, providing it is regular. This, we feel, is a case where from every angle the Railway is right and their request for amendment should be granted. We would, therefore,

recommend that Rule (E) of the Eastern agreement be amended and be re-written as follows:—

Paragraph 1 in its present form.

Paragraph 2 to read as follows:—

> Where regular assignments are worked in continuous service, i.e., the second crew relieves the first, the third crew relieves the second and the first crew relieves the third, the starting time for the first crew shall be between 6 a.m. and 8 a.m.

Paragraph 3 should be written as follows:—

> Starting time of yard assignments other than those specified in the preceding clause, including extras, shall be in accordance with the requirements of the service.

We would eliminate Paragraphs 4, 5, 6 and 7 from the rule, and we would so recommend.

In view of the fact that the same request, as above set out, applies to the Western agreement, we would recommend that the appropriate rule of the Western agreement be altered in the same fashion as we have recommended in connection with the Eastern agreement.

The Company's second request is in connection with the extension of switching limits to meet industrial expansion. The Company takes the position that by reason of industrial expansion of this country the existing switching limits have become antiquated, and that industrial development has gone far beyond them. It is pointed out that the result of this industrial expansion is that in some instances which are not at all limited road engines have to be brought in to industrial centres from distant division points, and some of which are as far as a hundred odd miles away, to do switching, in spite of the fact that a switching engine assigned to an adjacent yard would be within two or three miles of the tracks in question. This results in a very great hardship and a very great waste to the Railway. Not only does it cost the Railway from a financial standpoint, but it tends at the same time to limit the service which may be given to industries and thereby plays in the hands of the Railway's competitors. Surely, from the standpoint of self-preservation, neither the men nor the Railway desire this result. It is true that from the men's standpoint certain roadmen may lose what they may consider to be vested rights if the switching limits are adjusted without those men being given opportunity to transfer from road service to yard service. We can see no valid objection other than this to the request of the Railway. It would seem that something should be worked out that would be equitable to the men who would be affected by this change, but this should not be difficult if a certain amount of give and take is exhibited from both sides. In view of the fact that the rule which has been requested by the Railway, with the exception of the last paragraph, is in the Canadian National contract, we can see really no valid reason why it should not be put in this Railway contract. The last clause (c) of the rule is nothing but a statement which is contained in the present rule, and should, therefore, not constitute any difficulty. We would, therefore, recommend that the present rule be amended according to the proposal of the Company to read as follows:—

> (a) The necessity of changing or re-establishing recognized switching limits, in order to render switching services required because of extension of industrial activities and territorial extension of facilities must be recognized.
>
> (b) The present switching limits will be designated by general notice at all points where yard engines are assigned and will only be changed by negotiations between the proper Officer of the Company and the General Chairman. The concurrence of the General Chairman will not be withheld when it can be shown that changes are necessitated by industrial activities and territorial extension of facilities. Yard limit boards may or may not indicate switching limits.
>
> (c) This rule is not intended to prevent the Company from using yardmen to switch industrial tracks within a reasonable distance of existing terminal switching limits.

The third proposal of the Company is a request that *pro rata* rates be paid for a second shift in yard service starting within a twenty-four hour period. We are quite well aware that the Company has made out a reasonable case for amendment. We do not feel that there is any particular sanctity for this rule because it came with the MacAdoo award, or because it was re-negotiated in 1948 in its present form. There are certain parts of it that, in our opinion, are justified. We would be quite prepared to say that, if a man is required by the Company and for Company convenience to work a second shift in 24 hours, he should be paid the overtime rates, providing it has all other incidents of overtime. We understand there is some question as to whether or not seniority rules under the terms of the agreement force the Company to call the man with seniority whether or not that man had had sufficient time off to avoid the necessity of payment of overtime rates. If this be the case and the

Company has no choice, it would seem that it should not carry with it a penalty payment. If, on the other hand, it is a call made according to the exigencies of the service for the benefit of the Company, one would feel that it was proper that they should pay penalty rates so that it would discourage the overtime work and act as a deterrent. The Union takes the position that the Company's interpretation is not right. In view of this point of view, it would seem that there is very little difference between the parties in actual fact. We think, therefore, that it can be settled between the parties without any great difficulty. In line, therefore, with the understanding of the Union and in line with what we think is a proper solution, we would recommend that the rule be retained in its present form, but that there be a sub-note of clarification added to it in the following form:—

> Nothing in this agreement shall obligate the Railway to call a spare yardman who would be entitled to payment at overtime rates when there are available spare yardmen who could work on *pro rata* rates.

With this not attached to form a part of the rule, we feel that the major objection to the rule would be overcome and it should be equitable from everyone's standpoint.

The Company's last two requests apply both to the Eastern and to the Prairie and Pacific Regions, and therefore our recommendations apply to both Regions, and appropriate amendments should be made in line with the aforesaid recommendations.

The Company's next request for amendment was with regard to the yardmasters' agreement. This request involved to a great extent the same principles as were set out in the Company's request for change in the starting time rule in so far as yard crews were concerned. They ask here that the starting time rule limitations be loosened and amended so that yardmasters' hours would conform with yardmen's hours. The reasoning which applied to the recommendations under that request as it applied to the yardmen applies to the recommendations here with equal strength. The Board have stated in their reasoning that they saw no particular sanctity in the hours set out in the old rules. We feel that the men are entitled to regularity of employment as well as regularity of working hours, and if started at a particular hour on one day should start at that hour every day, but to limit those hours as in the present rule seems to us somewhat unreasonable. Therefore, we recommend that the rules in question be amended as follows:—

That there be no change in Paragraph (a).

That Paragraph (b) be deleted and the following substituted for it:—

> Starting time will be arranged to suit local conditions within the limitations of Paragraph (a).

We would eliminate Paragraphs (c) and (d) completely.

With regard to the request on split trick assignments, the Board recognizes the difficulties of the present rule from the standpoint of Management. We recognize, too, that the proposed rule would be of great advantage to the efficient operation of the Railway. At the same time, we also must recognize that the men involved would be subject to unfair treatment if the bald rule as suggested by the Company were adopted in its present form. We believe that substantial justice could be done to both parties if the major portion of the old rule were maintained and the last sentence deleted from it and replaced by a requirement which would allow the establishment of split trick assignments to meet special local conditions by agreement between the Company and the representatives of the employees. We would provide, in addition, that if agreement were not possible between the parties themselves, that there be a provision allowing it to be submitted to an arbitrator for final decision. We would, therefore, re-write Paragraph (e) dealing with split tricks so that it would read as follows:—

> When not more than two Yardmaster tricks are worked in any yard, assignments will be subject to negotiation between the Company and the representatives of the Yardmasters, and will not exceed eight (8) working hours within a spread of ten (10) hours, provided that at points where only one (1) trick is worked and local conditions make this necessary, this period may be extended to eight (8) hours within twelve (12) hours. Other split trick assignments may be established to meet special local conditions in other yards by agreement between the Company and the accredited representative of the employees. If the parties fail to agree to the establishment of these special split trick assignments to meet local conditions, then the matter may be referred to arbitration to settle the necessity and the basis as well as the conditions of the split trick assignment.

Dated at Picton, Ontario, this 10th day of December, A.D. 1952.

(Sgd.) Wilfrid S. Lane,
Chairman.

(Sgd.) Norman L. Mathews,
Member.

Report of the Hon. A. W. Roebuck, QC

It is with regret that I must report my inability to join in the Report of the Chairman, His Honour Judge W. S. Lane, and concurred in by Mr. Norman L. Mathews, QC. There are a number of statements in the Chairman's general remarks which I do not approve, and there are a number of recommendations, particularly that with regard to wages, with which I emphatically disagree.

I could not join for instance in the general statement that no individual employee has a higher right than the greatest number. This comment is made in the majority report in reference to proposed rule changes which have been in effect for many years and under which certain groups of men have acquired seniority rights. I submit that the interests of numbers however great do not brush aside the rights of their fellows however few in number or humble in position. This observation has particular reference to roadmen whom the Company would push aside in its own interests.

The majority of the Board are not impressed with the men's argument that they are entitled to share in the increase in national production and the Board would limit them to any general increase in wage rates which would form a basis for comparison. If each were limited by what other workers receive, there could be no advance. If the workers are not entitled to share increased productivity, to whom should it go and to whom does it belong? I disagree heartily with any such philosophy.

The Brotherhood has asked for an advance in wages of 35 per cent across the board, and has supported their request on the grounds of an increase in the cost of living, including a considerable burden of taxation on the one hand, and an increase in the productivity of their work and of Canada generally on the other hand, and they point out that the wages of the classes of employees which they represent have not advanced proportionately to the wages of other classes, and with wages in industry generally. The cost of living has risen since the last increase in wages given to these men in December 1950, when their last agreement was signed. At that time it stood at 171·1, and it increased during the period of the agreement to 188·7 in April 1952, when the Trainmen's new agreement should come into effect, an advance of 10·3 per cent.

The majority of the Board would limit consideration of increases in the cost of living to those which took place subsequent to the signing of the last agreement, but that agreement was itself a compromise, brought about by the play of many conflicting factors. The men asked for an increase of 30 cents per hour and finally accepted 14½ cents per hour. If it is to be assumed as it suggested, that when the parties agree on an overall picture there the component details upon which compromises have been made are each and all adjusted on a basis of fairness and all closed to future consideration, settlements by compromise would be impossible.

The increase in taxation to which the railroad has been subjected in recent years has been passed on by the Railway in increased passenger and freight rates to the general public. This is the rule with regard to taxes upon enterprise and production generally in both manufacture and commerce, and the men claim quite naturally that taxation is an element which enters into the maintenance of their standard of living.

The Brotherhood claims that the workers in the Railway industry are entitled to share in the increased productivity of the business in which they are engaged as well as in the industrial progress of the nation as a whole. It is common knowledge that the Railways are hauling much more freight tons behind each locomotive than was possible a few years ago, and the introduction of diesel traction power will continue the trend upward sharply in the future. In 1939, the total value of goods and services produced in Canada amounted to 5·7 Billion Dollars; in 1950 it was 18·1 Billion Dollars, more than three times the 1939 figure, and in 1951 the figure is estimated at 21·2 Billion Dollars. Making all allowances for the increase of prices and the growth in population, it is stated that the amount of goods and services available for each person in Canada have increased from 1939 to 1951 by 52 per cent. The Brotherhood estimates that the standard of living could be half as high again in 1952 as it was in 1939 measured in goods and services available. The Trainmen believe they are entitled to share to some extent in this progress. The Union was able to show increases in real wages to industry generally considerably in advance of the increases obtained by trainmen.

In reply, the Railway management pointed out the increase in the operating ratio from 91·05 in 1950 to 94·37 in 1951. The difficulties encountered by Canadian

Railways in meeting their financial obligations are serious, but this is not a good reason why their obligations should not be met. The Railway's balance sheet is not an element in the cost of equipment and supplies, and, while the employees of the Brotherhood are vitally interested in the success of their industry, they must not be expected to work for a lower rate of wages than is justified by the facts. The Railways are Canada's national life line, and have throughout their history been a concern of the Dominion Government. They are essential to the economy of Canada, and those in authority must take such steps as will enable them to pay their legitimate expenses.

My fellow members of the Board concede that an increase is justified under all the circumstances, and they have recommended an advance of 12 per cent. I disagree only as to the amount. The Brotherhood has asked for 35 per cent, and weighing all the factors, and after a very extensive investigation, I am of opinion that the circumstances warrant and justify an increase of 20 per cent. The average basic rate of all employees of the Canadian Pacific Railway within the membership of the Brotherhood of Railroad Trainmen, as exhibited in their current agreement, is $1.30 per hour. The increase that I have suggested would raise the rate to $1.55·8 per hour, which is certainly not excessive when compared to wages paid in industry generally. It must be borne in mind that the members of the Brotherhood of Railroad Trainmen are Conductors, Baggagemen, Brakemen and Switchmen in Yard Service. They are the men who operate the trains under all conditions of hardship and hazards. When one considers the exposure to which many of them are subjected, the irregular hours, and their hours away from home, and the responsibilities which they carry, it seems to me that the rate suggested is thoroughly justified.

The wage recommendation in the majority Report makes the increase recommended conditional upon the acceptance by the employees of certain rule changes asked for by the employers and recommended in that report. I do not approve such a proceeding, and I am quite confident that the members of the Brotherhood will not willingly accept changes of rules which they consider to their advantage for any wage or other consideration. The rules in question must stand or fall on their own merits. It would be a mistake to consider them subject to the compulsion of financial considerations.

Wages should be set at a figure that is reasonable, and the rules should be considered on the basis of relevant facts. Any suggestion that the men be coerced into accepting permanent rules by a withholding of any portion of the pay to which they are entitled would be keenly resented.

The men have asked for an Escalator Clause in their prospective agreement, that is an increase in wages to offset increases in the cost of living should they occur. According to the decision of the Chairman and Mr. Mathews as set forth in the majority Report, this is decided against on the ground of difficulty in bookkeeping and budgeting, which make it neither feasible nor possible at this time. The writers, however, seemed to have overlooked the fact that the Escalator Clause, or a cost-of-living bonus, is in effect on every Railway in the United States benefiting more than a million employees, and including those Railway lines operating in the United States under the jurisdiction of both the Canadian National Railways and the Canadian Pacific Railway. Not only so, but a cost-of-living bonus was in effect at the instance of the Government of Canada itself, on the Railways of Canada during most of the years of the recent Great War. There is much to be said in favour of the Escalator Clause for it gives security against fluctuations in the cost-of-living and has been very widely used for this purpose in railroading and other industry and has not been found economically unsound.

The Brotherhood asks for a 40-hour week in Yard Service only, and the Chairman admits that the five-day week is becoming a pattern in industry in this country. That is so, and the rule is in effect in Yard Service in the United States on many of the major Railways of that country, for instance, the Pennsylvania, New York Central, Ohio Lines, Northern Pacific, Great Northern and other leading railways. The non-operating employees of both Canadian Railways now have it and as well the men who work in conjunction with the Yard Service employees, men who actually operate the cars, such for instance, as those who couple hose, inspect cars, repair cars, trackmen, maintenance forces and so forth, complementary to the Yard Service. All hourly paid men on the staffs of both Railroads of Canada are on a five-day week with the exception only of the Yard Service employees. They are the last ones to be included, and they are the very class who need it most. The work of the Yardmen is to be distinguished from other

Railway trades in that they tramp about on foot, climb on and off cars, wind brakes and endure hard physical work in the open in all conditions of weather and in three shifts throughout the entire 24 hours of the day. I personally endorse the principle. Its application is coming inevitably, and the Railway management would do well to accept it gracefully and co-operate in making it effective by the 1st of October 1953.

Request No. 1.—Both the Brotherhood and the Management have made requests for rule changes. The Union has asked that baggagemen and trainmen on the Canadian Pacific Eastern Lines be paid for the handling of Government mail as they are in the Canadian Pacific Western Region and as they are in both Eastern and Western Regions of the Canadian National Railways. The majority Report recommends the granting of this request and with this recommendation, I agree.

Request No. 2.—Is for payment of initial and final terminal delay to trainmen in the Eastern Region of the Canadian Pacific Railway, as is the rule on the Canadian National Railways. This request is denied by the majority members of the Board on the ground that in the Eastern Region Canadian Pacific trainmen receive a slightly higher take-home pay than do Canadian National trainmen. It is suggested that the terminal delay compensation is figured in the general pay rates, but this can hardly be so, because the difference in general pay rates on the two railroads is so small as to afford no reasonable offset to what may be expected from initial and final terminal delay payments. On the Canadian Pacific Eastern Division, through Freight Conductors are paid ·09 cents per day and Brakemen are paid ·07 cents per day in excess of what similar workers receive on the Canadian National Railways. This is an average of about one cent per hour and is so small that it may be disregarded.

Initial and final terminal delay is paid to Engineers and firemen and has been for years on the very same trains upon which the majority Report would deny it to trainmen. Moreover, it is paid to trainmen on the Canadian Pacific Western Division on the Northern Alberta Railway, on the Ontario Northland Railway and on the Canadian National both East and West. Apparently, the only Railway where it is not paid is the Canadian Pacific Eastern Division. I disagree with the majority finding and recommend that this second request of the Brotherhood be granted.

The majority of the Board recommend the granting of the men's request that extra yard engine crews when in service for five days with a starting time that has not varied more than one hour and thirty minutes, thereafter be deemed to be a regular assignment and be treated as such, but the majority Report adds—only on condition that the Brotherhood sacrifice the protection of the starting time rule. Were the men to accept the condition, their loss would far exceed their gain. I again object to attaching conditions of this kind. The request should be considered upon its merits and extra yard engines crews should be regularly assigned after a certain period of uniform service, or they should not be regularly assigned. I think it is unreasonable that engines, and of course their crews, should work indefinitely under regular conditions and not be regularly assigned, and I recommend that this request of the Brotherhood be granted.

The Union has requested a change in Rule (S) of the Yardmen's agreement which limits the period within which, after booking rest, a yardman may be called for duty. At the present time, a yardman after 12 hours of duty may not be called for further duty until after the expiration of the usual period of rest, and the Brotherhood maintains that he should be permitted to book rest immediately on the conclusion of 8 hours, which is the regulation day's work. Both Management and the Union were of opinion that this matter could be worked out harmoniously, and the Board is accordingly unanimous in making no recommendation.

The Brotherhood has asked that Yardmen after working for sixty days as Yardmaster be given Yardmaster seniority listing, so that thereafter they may bid for bulletined Yardmaster positions. At the hearing we were told of Yardmen who had worked for years as extra or temporary Yardmasters and who had never been permitted to bid for permanent appointments. Notwithstanding the Company contention that promotion is exclusively a function of management, I agree with the other Members of the Board in changing the rule in the terms set forth in the majority Report.

Yardmasters make the plans for the switching of cars, and the Yardmen carry them out. The men complain that quite frequently Yardmasters interfere in the operation in an unexpected and unpredictable manner, creating situations which are both annoying and dangerous. A train is being broken up, it may be on a dark and even stormy night. The cars are fanning

out down different tracks for sorting purposes. The work is proceeding according to plan, when suddenly out of the office comes a Yardmaster, carrying a yardman's lantern, and shoots a car down a switching track. The shock and disruption can be imagined, along with the hazards. The Brotherhood asks that Yardmasters be prohibited from throwing switches or giving signals except to prevent accidents in cases of emergency. They would have Yardmasters make plans, supervise, start and stop operations and generally act in a managerial capacity, and not interfere in duties which are the function of other classes of employees. The majority of the Board refuse the men's request on the ground that it would lessen the authority of the Yardmasters when in charge of the switching yards. It seems to me that the Brotherhood's proposed rule would lessen the abuse of authority and that management should readily consent to some regulation which would confine Yardmasters to Yardmasters work, and I so recommend.

The Union is interested in the classification of switching yards, because the rates of pay to Yardmen are greater in first class yards than in second class yards, and greater in second class than in third class. The Brotherhood maintains that the present classification is antiquated and is not in keeping with modern conditions. The majority Report is to the effect that the classification of yards is a function of management. I agree that the Board is not in a position to reclassify yards, but when I see such places as North Bay which has long been regarded as a railway terminal of three railways; London, Ontario, which is a great City, Ottawa, Kenora, Brandon and other important railway centres classified as second class yards, I have confidence in recommending that Management confer with the Brotherhood immediately with a view to reclassification.

I now turn to Rule changes requested by the Company.

The majority Report argue that time does not sanctify rules and it would grant the request of the Company that, in effect, starting time regulations in Yard service be abolished and the matter of when men commence work be left entirely in the discretion of local Yard managements, in accordance with their individual whims or the exigencies of the service. Were the amending Rule recommended by the majority Report of the Board adopted, there would be no regularity protection left for the workers, who thereafter might just as well have their names on the spare board to be called at any moment of the day or night. I am sure that the Chairman does not wish such a condition to be brought about, but such would be the result of his recommendation.

The starting time Rule was introduced into Canada with the adoption of the McAdoo Award in 1919, and has been in effect on all railroads of United States and Canada ever since, and were the majority recommendation accepted the Canadian Pacific Railway would operate under arrangements with regard to starting times drastically different from any other Railway in North America. It is significant that the Canadian National management did not join in this request of the Canadian Pacific, nor did the Canadian National Management mention any of the complaints voiced by the Canadian Pacific. It is natural that Management should desire the abolition of all restrictions upon its freedom of action, but it is equally to be expected that the employees will resist innovations that encroach upon the routine of their lives, their health and wellbeing.

The Canadian Pacific Management has all the latitude really required in respect to starting time in Yard service, and should there be any special local condition to be met, it can be dealt with by conference between Company and Union. In my opinion, the Company's request should be refused and the majority recommendation should be rejected and this applies equally to the Eastern and Western Regions.

It is futile to detail the many reasons why switching yards should be extended from time to time to meet the requirements of changing conditions and an expanding economy; we all agree, and the Brotherhood has signified its willingness to accept the amended Rule as drawn by Company representatives. The only difficulty lies in the Company's refusal to take care of the employees whose seniority rights are invaded by the proposed changes. Yardmen do the switching in the Yards to their outside limits, while roadmen give similar service to those industries located outside the yards. If the yard limits are extended for a number of miles in some instances as proposed, certain roadmen will be out of work. For instance, in the Vancouver district there are six or eight road crews operating within the proposed extension of the Vancouver yard. Were the new Rule adopted as proposed, the Company could extend the limit, discharge the roadman crews, some of whom have many years seniority, and hire new yardmen to do the work. Is there not some significance in the fact that the Company

has so far refused to accept the following clause as an addition by the Union to the rule proposed by the Company:—

> In the extension of switching limits, the rights of roadmen thereon will be conserved by negotiations respecting the allocation of work between road and yard men.

If the Brotherhood's fears are unwarranted with respect to the Company's intentions, why does management refuse to conserve the seniority rights of the displaced roadmen? All the Union requires is that the roadmen be given the same seniority rights within the yard in the allocation of work which they possessed on the same tracks outside the yard prior to the extension. The railroad system of North America is based on a seniority way of life, and it need not be expected that Roadmen will willingly consent to their work being taken over by newly hired employees, and with the work their jobs.

The majority Members of the Board agree that the seniority rights of the roadmen should be protected, but, in the rule change proposed, the majority Report fails to do so. I recommend that the Company's proposed Rule be adopted, but only on acceptance by the Company of the Brotherhood's protective clause.

I am of opinion that the Company is not justified in its proposed Rule change which would relieve it from the necessity of paying overtime when it requires a yardman to perform a second shift within a 24-hour period after having already served an eight-hour day. The Board is unanimous in recommending that the overtime rule be retained and also that it be made clear beyond misunderstanding that seniority rights do not require the Company to call for second shift an employee entitled to overtime when one is available at *pro rata* rate.

In its next request, the Company would throw open the starting times of Yardmasters in the same manner as they would deal with the starting times of Yard crews, so that both yardmen and yardmasters might be called for service at any hour of the day or night as may suit the impulse of local management or, as it is called, the requirements of the service. All that I have said above applies, and I need not repeat it. The granting of such a request is to my understanding of the facts unthinkable, and I recommend accordingly.

The Company asks that the rule with regard to split tricks be amended to allow Management to scatter the 8 hours of the Yardmen's day through periods of ten to twelve hours at will and without consultation with representatives of the men affected. This request, the majority of the Board rejects, but of its own volition, recommends that when the representatives of the parties disagree the matter be referred to arbitration, something which neither Management nor the Brotherhood requested. Such a proposal was not even discussed at the hearings, probably because both parties recognized the impracticability of arbitrating minor points of local management which are continuously arising and frequently of temporary duration.

Under the rule as it now stands, when not more than two Yardmaster tricks are worked in any yard, split trick assignments are subject to negotiations between the Company and representatives of the Yardmasters and must not exceed 8 working hours within a spread of 10 hours. When only one trick is worked and local conditions make it necessary, the spread may be 12 hours. Other split trick assignments may be etsablished to meet special local conditions in other yards by agreement between the Company and the accredited representatives of the employees.

Thus in all but the smallest yards, men divide their day into two or more parts in so-called split tricks only on consent. Split tricks are undesirable from the worker's standpoint and by this requirement of consent of the Brotherhood, their number is held down to that actually required. The system has worked most harmoniously in the past and the real requirements of management have always been met.

Now it is recommended by the majority of the Board (though asked for by neither party) that when the Brotherhood considers a Company demand for a split trick unnecessary the matter be referred to arbitration, so that if the majority of the Arbitrators agree with the Company men will be asked to work under conditions to which their Union has not agreed and to which the men object. The purpose of the recommendation is no doubt to bring about a progressive and harmonious administration in the yards in question, but unfortunately for the recommendation the conditions which would in fact result would be anything but harmony, and would be more likely to be retrogressive, than progressive. The basic idea of arbitration is disagreement, and there has been substantially no disagreement in the past. The introduction of compulsion following an adverse decision of a Board is utterly

unnecessary and inadvisable and I recommend against it, leaving the present rule to continue to operate as at present drawn.

There is one more point in the majority Report with which I must deal, and that is the suggestion that there can be no retroactivity in the Board's recommendation because of an agreement between the parties. The agreement to which the Report must refer is that dated the 4th day of February 1932, which reads in part as follows:—

> It is agreed that in the event of any disputes arising in future in respect to proposed revisions of any or all of the agreements which shall be referred to Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act retroactive effect shall not, except by mutual agreement, be given to the recommendations of such Boards beyond the date the disputes are finally dealt with by the Boards and copies of their reports have been delivered through the Registrar of Boards of Conciliation and Investigation to the parties affected.

This agreement also provided for a reduction of ten per cent in the pay of the classes of Railway employees of both the CNR and CPR Companies, and it is quite obvious that "the agreements" to which reference is made were the agreements then in effect between the parties. The agreements in question were to run for a considerable time, but they have long since passed into oblivion. Not only so, but the paragraph above quoted refers to "Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act." That Act gave way to the provisions of Order in Council, P.C. 1003, which in turn was succeeded by the Industrial Relations and Disputes Investigation Act assented to on the 30th of June 1948, Section 73 of which is in these words:—

"The Industrial Disputes Investigation Act is repealed."

A provision with respect to Conciliation Boards under an Act long since repealed, and in reference to agreements long since expired can have no reference whatever to the present relations between the Canadian Pacific Railway and its employees in the year 1952.

Not only so, but agreements which have been entered into between the Company and the Unions in recent years have been made retroactive by consent of both parties. No objection was made or even suggested when on the 3rd of March 1951, an agreement was signed which was retroactive to the 1st of December 1950. This is the very agreement which we are now proposing to revise, and which is referred to in the majority Report in reference to the cost-of-living index matter.

In my opinion any recommendations made by this Board should be retroactive, so far as that is physically possible, to the 1st of April 1952, when the current agreement expired.

Dated at Toronto, Ontario, this 24th day of December, A.D. 1952.

(Sgd.) A. W. Roebuck,
Member.

Change in ILO Constitution Proposed

The Governing Body of the International Labour Organization has decided to ask the ILO general conference in June to consider an amendment to the ILO constitution under which the membership of the Governing Body would be increased from 32 to 40.

The Governing Body is at present composed of 16 government members, eight employers and eight workers, with eight of the government seats being allocated to the eight countries "of chief industrial importance". (Canada is one of the eight countries.)

Director-General David A. Morse proposed that the conference consider increasing the government seats to 20, the employer seats to 10, and the worker seats to 10. Ten of the government seats would be held by the most industrially important states.

ILO membership has grown from 43 countries in 1919 to 66 at present, while the membership of the Governing Body has been fixed at 32 since 1934.

The Governing Body is elected every three years; the next election is scheduled for 1954.

Collective Agreements and Wage Schedules

Recent Collective Agreements

Manufacturing

Meat Processing—*Charlottetown, P.E.I., Montreal and Hull, Que., Toronto and Peterborough, Ont., Winnipeg, Man., Edmonton, Alta., and Vancouver, B.C. —Canada Packers Limited and the United Packinghouse Workers of America, Locals 282, 357, 314, 114, 210, 216, 243 and 162, respectively.*

Agreement to be in effect from August 1, 1952, to July 31, 1954, and thereafter from year to year, subject to two months' notice. However, either party may at any time between June 1 and July 31, 1953, give notice of its desire to amend the provisions relating to wages only; if the subsequent negotiations do not result in settlement within 30 days, either party may give notice of cancellation which shall take effect 31 days thereafter.

Union security and check-off: maintenance of membership and a voluntary and revocable check-off, except that new employees shall, as a condition of employment, pay dues to the union during the term of the agreement, beginning with the second monthly check-off date after employment. However, between July 16 and July 31, 1954 (both dates inclusive) any employee may resign from membership in the union and/or cancel his authorization to deduct dues and his employment shall not thereby be affected.

Hours of work shall not exceed 8½ per day and 40 (previously 44 at Montreal and Hull and 42 at the other plants) per week. The union agrees that it may at times be necessary to exceed or to reduce these basic hours. The company agrees to guarantee a minimum work week of 36 hours (previously 36½ hours at Montreal and Hull and 36 at the other plants) at regular rates of pay, subject to certain specified conditions.

Overtime: hourly-rated employees will be paid time and one-half for all hours worked in excess of the number of hours prescribed for the day, for work after expiry of one hour beyond an employees' scheduled quitting time, irrespective of the number of hours worked during the day, and for all hours worked before the scheduled starting time; double time for work on Sunday or the alternative day off and double time and one-half for work on eight specified *paid holidays.* Shift employees working on a paid holiday may elect to receive either double time and one-half or the regular rate and another day off with pay. Weekly-paid employees shall receive compensating time off with pay for work in excess of their weekly or daily schedule of hours or for work on a paid holiday.

Rest periods of 10 minutes each during morning and afternoon shifts will be granted, provided the working time of the shift exceeds 2½ hours.

Vacations with pay: one fifty-second of one week for every week's service for employees with less than one year's service, one week after one year's service, two weeks after five years' service and three weeks after 15 years' service.

Wages: hourly wage rates are increased by five per cent over the previous rates; to the rates so reached four cents per hour will be added to the rates of hourly-paid employees at Charlottetown and two cents per hour to the rates of hourly-paid female employees at Vancouver. Weekly wage rates are increased by 2½ per cent. (A cost-of-living allowance payable under the terms of the previous agreement has been discontinued.)

Night shift differential: the company agrees to pay a premium of seven cents per hour for work performed between 6 p.m. and 6 a.m. In Winnipeg and Edmonton a premium of seven cents per hour will be paid to all employees working on shifts beginning between 3 p.m. and 3 a.m. (an increase of two cents per hour in either case).

The sick pay and welfare plan as amended will remain in effect for the term of the agreement.

Provision is made for *grievance procedure, seniority rights* and the *safety and health* of employees.

Textiles—*Marysville and Milltown, N.B., Cornwall and Hamilton, Ont.—Canadian Cottons Limited and Textile Workers' Union of America, Locals 854, 858, 806 and 962.*

Agreement to be in effect from August 20, 1952, to December 17, 1953, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect (L.G., June, 1951, p. 821), with the following change:—

Statutory holidays: the number of paid holidays has been increased from five to six.

Shipbuilding—*Montreal, P.Q.—Canadian Vickers Limited and L'Union Nationale des Employés de la Vickers, CTCC (National Union of Vickers Employees, CCCL).*

Agreement, following strike (L.G., Dec., 1952, p. 1675), to be in effect from October 29, 1952, to October 28, 1953, and thereafter from year to year, subject to notice.

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized here. Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Check-off: the company agrees to the check-off of union dues, subject to a secret vote among the union members and provided that 55 per cent of those voting are in favour of same. The check-off is to be voluntary and the authorization form is to contain an escape clause which would permit employees to revoke the authorization 30 to 60 days before the termination of the agreement.

Hours: nine per day, Monday through Friday, a 45-hour week. *Overtime:* time and one-half for work in excess of the regular hours and days of work; double time for work on Sundays and on seven specified holidays, five of which are *paid holidays* (previous agreement provided for four paid holidays).

Vacations with pay shall be in accordance with Ordinance No. 3 and amendments (one week after one year's service). After two years' accumulated service (as calculated from November 1, 1945) employees shall receive an extra day's pay, after three years two extra days' pay and after four years three extra days' pay; after five years' accumulated service employees shall receive an additional week's vacation with pay. In checking a man's seniority status back to 1945, the six months' clause for maintaining continuity shall prevail.

Hourly wage rates are increased by 12 cents over the rates in existence as of August 18, 1952, and are now as follows: marine department—layoutman $1.47 to $1.62, slab man $1.47 to $1.57, loftsman $1.42 to $1.72; blacksmith, caulker, electrician, joiner, plater, riveter, shipwright $1.37 to $1.47; assembler $1.35 to $1.47, linerman $1.33 to $1.40, machine operator $1.30 to $1.35, painters $1.30 to $1.47; welders $1.25 to $1.47, trainee 90 cents to $1.03; rivet tester $1.52, straightener $1.28 to $1.37, burner $1.27 to $1.37, driller $1.27 to $1.35, rigger $1.25 to $1.35; chipper, holder on $1.25 to $1.33; stager $1.24 to $1.30, erector $1.22 to $1.30, heater $1.21 to $1.28, bolter-up $1.16 to $1.24, slab helper $1.15 to $1.24, slinger $1.12 to $1.29, reamer $1.15 to $1.23, helper $1 to $1.19, labourer $1.

Dirty work: certain specified dirty work will be compensated by an additional 15 cents per hour above the regular rates. A bonus of five cents per hour will be paid for all repair work on ships inside and below the level of floor plates.

Night shift differential: men working on night shift will be paid at the rate of time and one-eighth.

The company will provide milk to employees working on types of work where gas or poisonous fumes may be injurious.

Work outside the plant: for ship work performed outside the Island of Montreal the company will pay travelling expenses, room and board and for travelling time on the basis of the employees' regular working hours at his regular rate of pay.

Provision is made for *grievance procedure, seniority rights* and the *safety and health* of employees.

Construction

Roads—*Province of British Columbia—Road Builders and Heavy Construction Association and International Union of Operating Engineers, Local 115.*

Agreement to be in effect from January 2, 1952, to January 1, 1955, and thereafter subject to 60 days' notice. However, negotiations regarding wages only may be opened each year on the anniversary date of the agreement, on 60 days' notice; if agreement is not reached during such negotiations, the agreement as a whole shall be terminated in order to permit the parties to declare or authorize a strike or a lockout.

Union security: closed shop.

Hours: eight per day Monday through Friday, a 40-hour week. Any time required for servicing, steaming up or shutting down before or after a shift shall be paid for at the regular rate. On jobs outside a radius of 25 miles from the Vancouver city hall, or on jobs where camps are maintained, 44 hours a week may be worked at straight time. *Overtime:* double time for work in excess of eight hours until a break of a full shift occurs and for work on Saturdays, Sundays and on eight specified holidays. No work is to be done on Labour Day. When working with sections of the construction industry, other than heavy construction, operating engineers will be paid at the extra overtime rate which is usually paid by those sections. If the company elects to work continuously on a 10-hour day, 6-day week basis, time and one-half will be paid for the first two hours in excess of eight hours, Monday through Friday, and for the first 10 hours on Saturday, double time thereafter and for work on Sundays and holidays. *Shift work:* when additional shifts are required and continued for three or more consecutive nights eight hours' pay will be granted for 7½ hours of work on the second shift or seven hours on the third shift.

Vacation pay will be provided as required by provincial law.

Minimum hourly wage rates effective September 2, 1952: aerial cableways $2.40; bulldozers, carryalls (single), tournapulls, Terra Cobras, La Plante-Choate, grader and motor patrols, mucking machines $2.20; D-2, D-4 types $2, carryalls (tandem) $2.28; compressors, pumps (water) $1.82 and $2.08; clamshells, derricks, cranes of all types $2.35; crushers (man in charge), drills, core, cable, rotary and exploration drilling machines, fork lifts and lumber stackers, loaders, locomotives, batch plant operators, screening plant operators, pumpcrete and Groutt pump, scoopmobiles $2.13; hoists $2.10 to $2.25; mechanics (heavy duty), welders $2.30; oiler, firemen, mechanics, helpers, padmen $1.82; shovels $2.35 and $2.45; trenching machines, stationary steam engineers $2.13 and $2.25; mechanics working in permanent shops and permanently employed $1.95, helpers $1.62; foremen 25 cents per hour over highest classification under their supervision. Plant section (rates effective as of September 2, 1952): plant—foreman $2.04, plant mechanic $2.01; boilerman, mixerman $1.73; burnerman, fireman (uncertificated) $1.56; street—rollerman, finishing screed operator, finishing machine driver leverman $1.73.

Out-of-town jobs: operating engineers required on out-of-town jobs will receive transportation, meals and travelling time up to eight hours in 24 (including Saturday, Sunday and statutory holidays) when travelling during working hours; if night travel is necessary a sleeper will be provided. On jobs beyond the limits of a city, town or village transportation to and from the project shall be provided and travelling time, when it exceeds 30 minutes, shall be paid

each way at the regular rate. Where camps are maintained, operating engineers will pay $2 per day for board.

Provision is made for *grievance procedure.*

Transportation and Public Utilities

Urban, Suburban and Interurban Transportation—*Toronto, Ont.—The Toronto Transportation Commission and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 113.*

Agreement to be in effect from October 1, 1952, to September 30, 1953, and thereafter until a new agreement is executed.

General

Union security: union shop. Temporary employees (with certain exceptions) and juniors or apprentices shall become associate members of the association within 60 days from their date of entry with the Commission, the latter at one-half the regular monthly dues. All employees seeking admission shall be admitted by the union.

Check-off: the Commission agrees to check-off and remit to the association monthly from the pay of all members of the association who so authorize all dues and such assessments as may be assessed against them.

Vacations with pay: two weeks after one year's continuous service, three weeks after 12 (previously 15) years' continuous service.

Statutory holidays: all work performed by uniformed employees on a holiday for which a special selection has been held and on which a special holiday is in effect shall be paid for at time and one-half, except for work on Christmas Day and on New Year's Day which will be paid for at double time. Uniformed employees who would normally be at work, but for whom no work is available on the day any of eight statutory holidays is observed, will be paid eight hours' pay for each such holiday not worked. Such holiday pay shall be distributed on a fair rotating basis. Maintenance and other non-uniformed hourly-paid employees will be paid double time for work on eight (previously six) designated paid statutory holidays and time and one-half for work on the day any holiday other than a designated holiday is observed.

Hourly wage rates are, with a few exceptions, increased by three cents per hour over the basic wage rates previously in effect.

Escalator clause: there shall be a cost-of-living adjustment of three cents per hour for each rise or fall of four points above, but not below, a base figure of 191 in the Dominion Bureau of Statistics' cost-of-living index.

Provision is made for *grievance procedure,* a *pension fund, disability allowance, retirement gratuities, sick benefits* and *medical services.*

City and Suburban Uniformed Employees

Hours: eight per day, five days a week, with a leeway of one-half trip to complete schedule for two-thirds of the crews so far as practicable, the remainder to work ends and spares. Uniformed employees required to operate equipment into or out of service from or to carhouse yard or garage, or who may be required to report for a run or crew on the street, or be relieved on the street, will be allowed 15 minutes once each day worked at standard rate to compensate for reporting and signing-in time. Employees required to take vehicles at the carhouse or garage shall, at the first time reporting for the day, report to the office supervisor at least 10 minutes before scheduled time; when required to relieve on the street for the second and subsequent time and when not required to report to the office supervisor, they will be allowed the equivalent to the time required to travel between the carhouse or garage and the relief point, in excess of 10 minutes, at the regular rate of pay, such time in each case not to be computed as platform time. Off-days shall be arranged as agreed upon between the parties to the agreement.

Overtime: time and one-half for all combined work over 8½ actual working hours, or for time in excess of 11½ hours' spread for two or more piece crews; time and one-quarter for Sunday work. If a major emergency affects the passenger service making it impossible for vehicles to operate as scheduled, overtime rates shall not apply. No extra payment shall be made for overtime on Sunday.

Guaranteed pay: all scheduled crews for uniformed employees will be paid at least eight hours per day. The Commission guarantees to each extra uniformed employee a minimum pay of 80 hours (previously 70 hours) per 10-day pay period at employees' basic rate, provided he reports for work on time and carries out the duties assigned to him.

Uniforms: the Commission will pay half the cost of the uniforms for uniformed employees with one year's service and will provide free uniforms for employees with more than two years' service; no employee shall be required to pay for more than one uniform and a half.

Hourly wage rates—starting, intermediate and maximum rates for certain classes: conductor, motorman $1.41, $1.43½, $1.46; pay-enter car operator, bus and coach driver $1.46, $1.48½, $1.51; when in charge of trainees the above employees will be paid 15 cents per hour extra.

Seniority shall be in effect as agreed upon in detail from time to time. The selection of runs shall be made seasonally at least 4 times each year, or in the event of schedule adjustments.

Interurban Coach Drivers

Hours: the days' work will be arranged to suit the requirements of the business; existing arrangements as to personnel shall be continued. Off-days shall be arranged as agreed upon by the parties. Drivers required to take coaches at a terminal or garage at the first reporting for the day shall report to the terminal at least 10 minutes ahead of scheduled time; otherwise the runs shall be filled with other men if available.

Meal allowance: the Commission will grant an allowance of $1 for each meal, in excess of one, to drivers on trips requiring more than one meal away from their home terminal. Drivers on charter service, entitled to meal allowance under present regulations, shall be allowed $1.25 per meal.

Seniority: drivers shall have their respective places in the division in accordance with their date of permanent transfer to the division, and choice of runs shall be made on that basis.

Provisions regarding reporting and signing-in allowance, overtime, guaranteed pay, and uniforms are similar to the ones affecting city and suburban uniformed employees outlined above.

Divisional Clerks

Hours: the day's work will be arranged to suit the requirements of the business and normally there will be an 8-hour day, five days per week. Off-days shall be consecutive.

Overtime: time and one-half for all work in excess of eight actual working hours in one day and for work on the regular off-days. Time off shall not be given in lieu of off-days worked. Time and one-quarter will be paid for all Sunday work to regularly assigned employees.

Hourly wage rates: junior divisional clerks $1.41 to $1.46; divisional clerks $1.48½ and $1.51, general divisional clerk $1.54 and $1.57, senior divisional clerk $1.63.

Seniority shall be in effect as agreed upon in detail from time to time.

Maintenance Department

Hours: the daily hours of work shall be governed by the urgency of the work on hand, but normally there shall be an 8-hour day and a 5-day week. Way section employees of the Way and Structures Department shall work an average 5½-day week, alternately five days one week and six days the other, except for the way shop section employees who shall work as above only from May 1 to October 31, and a 5-day week from November 1 to April 30.

Overtime: time and one-half for work in excess of eight hours per day for employees with a regular 8-hour day and for all work on regular off-days; time and one-quarter for all Sunday work to employees who are regularly assigned to Sunday work.

Guaranteed pay: the Commission guarantees to every employee in the Way and Structures Department a minimum of seven hours' pay per regularly scheduled work day, provided such employee reports for work and carries out the duties assigned to him.

When in the opinion of the Commission the weather is inclement, employees in the way section shall be paid time and one-half for the actual time required to work in an emergency when changing steel at any location where operation of service must be restored.

Two suits of overalls, coveralls or smocks will be supplied free of charge to each hourly rated employee who requires them. Protective clothing shall be supplied for emergency crews, switch cleaners and, when necessary to certain other employees.

Hourly wage rates for certain classifications: equipment department—shop helper, car checker $1.35 and $1.38; steam jenny operator, shop mule operator $1.38 to $1.42; transfer table operator $1.41 to $1.46, traction motor installer $1.46 to $1.51; motor repairman $1.46 to $1.51, helper $1.38 to $1.42; service car repairman, vehicle wireman $1.51 to $1.57; general vehicle wireman, electrical repairman (small apparatus), general blacksmith $1.57 to $1.63; upholsterers $1.51 to $1.63, painters $1.41 to $1.57; stores section $1.35 to $1.51; apprentices from $1.16 during the first 6 months to $1.51 during the sixth 6 months. Way and structures department—labourer $1.35 and $1.38; truck driver, trackman, fire inspector $1.38 to $1.42; general trackman, equipment operator, general fire inspector $1.41 to $1.46; maintenance repairman, track grinder $1.46 to $1.51; general improver (way), shop welder, blacksmith, boilermaker $1.51 to $1.57; general welder, electric crane operator $1.57 to $1.63; general machinist $1.63 to $1.69.

Seniority shall be effective in the filling of vacancies, provided the employees concerned have the necessary qualifications and ability.

Urban, Suburban and Interurban Transportation—*Toronto, Ont.—The Toronto Transportation Commission and the National Organization of Civic, Utility and Electrical Workers, Branch No. 2.*

Agreement to be in effect from March 26, 1952, to March 31, 1953, and thereafter until a new agreement is executed.

Union security: union shop. The union will admit to membership all new employees engaged by the Commission and will not suspend or expel a member until agreed to by the Commission.

Check-off: the Commission agrees to deduct from the pay of each member of the union who so authorizes all dues and assessments assessed against such member and to remit same to the union.

Hours: eight per day five days a week, a forty-hour week, except for substation operators and other similar employees who shall work an average 5½-day week, five days one week and six days the other. *Overtime:* time and one-half for the first four hours of work in excess of eight hours per day, double time thereafter and for work on an employee's off-days. If an employee is called out for emergency work four hours or more after his normal finishing time he will be paid double time for all hours worked until his normal starting time. Employees regularly assigned to Sunday work will be paid time and one-quarter.

Statutory holidays: six paid and two unpaid holidays will be observed by the Commission. Employees required to work on the paid holidays will be paid straight time in addition to the holiday pay. Shift employees required to work on any unpaid holidays will be paid time and one-half, and day employees double time, for each hour worked.

Vacations with pay: two weeks after one year of continuous service, three weeks after 15 years of continuous service.

Clothing: two suits of overalls shall be provided free of charge to each hourly-rated employee who requires them. Rubber coats, rubber boots and hats will be provided for emergency men when necessary.

Hourly wage rates: substation electrician, grade I $1.66 to $1.72; electricians, emergency lineman, grade I $1.60 to $1.66, grade II $1.54 to $1.60, grade III $1.43 to $1.48; senior substation operator $1.54 to $1.60; substation operator $1.48 to $1.54, assistants $1.35 to $1.43, helper $1.32 and $1.35; shop service repairman $1.43 to $1.48, chauffeur groundsman $1.38 to $1.43; electricians' helper, chauffeur, service truck driver $1.35 to $1.39; electronic technician $298.56 to $328.81 (per month). (The above hourly rates are 24 cents per hour higher than the basic rates provided in the 1950 agreement but include cost-of-living adjustments made in the interim.)

Escalator clause: in addition to the above rates employees will be paid a cost-of-living adjustment of one cent per hour or $1.62½ per month for each change of 1·3 points in the Dominion Bureau of Statistics' cost-of-living index above, but not below, the base index figure of 190·4. (The previous agreement did not provide for a cost-of-living adjustment, but in February 1951, the Commission agreed to pay an adjustment of one cent per hour for each rise or fall of 1½ points in the cost-of-living index above the base index figure of 162·2.)

Provision is made for *grievance procedure, seniority rights, pensions, retirement gratuities, disability allowance* to certain employees, *sick benefits* and *medical services.*

Urban, Suburban and Interurban Transportation—*Toronto, Ont.—The Toronto Transportation Commission and International Association of Machinists, Lodge 235.*

Agreement to be in effect from October 1, 1952, to September 30, 1953, and thereafter for successive periods of one year, subject to 30 days' notice.

Union security: union shop with the provision that any eligible employee who on April 29, 1946, was a member of Division 113, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America may retain his present membership and will not be required to join Lodge 235 of the association; however, the association will be his sole bargaining agency. Part-time or seasonal employees shall become associate members of the association after 60 days' employment and shall then pay dues of $1 per month.

Check-off: the Commission agrees to check-off and remit to the association monthly from the pay of all members of the association who so authorize all dues and such assessments as may be assessed against such members. The association shall not impose an additional entrance fee or special assessment or increase its existing fees unless agreed to by both parties.

Hours: eight per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work in excess of eight hours per day, for work on Saturdays to employees who normally do not work on Saturdays and for all work on Sundays and on any unpaid holiday, except that lead hands, general machinists and general millwrights will be paid double time for work on such holidays and on Sundays; double time to all employees for work on eight (previously six) specified *paid holidays.*

Vacations with pay: two weeks after one year's continuous service, three weeks after 12 (previously after 15) years of continuous service.

Clothing: two suits of overalls will be supplied free of charge every year to employees covered by the agreement.

Hourly wage rates—starting, intermediate and maximum: lead hand machinist $1.69, $1.72, $1.75; general millwright, general machinist $1.63, $1.66, $1.69; machinist, bench fitter, spray welder, P.C.C. axle fitter, metalizer-grinder $1.57, $1.60, $1.63; radial drill operator, punch press operator, bench repairman, millwright $1.51, $1.54, $1.57; wheel press operator, metal polisher, babbit moulder, drill hand, threading machine operator $1.46, $1.48½, $1.51; bench handyman $1.41, $1.43½, $1.46; machine shop helper, sand blast operator $1.38, $1.40, $1.42; apprentices—first six months $1.11, second six months $1.16 and so on to $1.56 during the eighth six months. (The above rates are three cents per hour higher than the previous rates.)

Escalator clause: there shall be a cost-of-living adjustment based upon a supplementary increase of three cents per hour for each rise or fall of four points above, but not below, a base index figure of 191 in the Dominion Bureau of Statistics' cost-of-living index. (The previous agreement provided for a cost-of-living adjustment of one cent per hour for each change of 1·3 points in the index above the base figure of 190·4.)

Provision is made for *seniority rights, grievance procedure,* an *apprenticeship plan, pensions, disability allowance* and retirement gratuities for certain employees, *sick benefits* and *medical services.*

Service

Laundry—*Sydney, N.S.—White Circle Company Limited and Sydney Dry Cleaning and Laundry Workers' Union (CCL).*

Agreement to be in effect from June 30, 1952, to June 29, 1953, and thereafter from year to year, subject to 30 days' notice, provided, however, that wage rates may be re-negotiated on 30 days' notice given by either party. The wage schedule shall be reviewed within six months.

Union security: union shop.

Check-off: the company agrees to deduct union dues from the pay of all union members who so authorize and to remit same to the union. The company will make a charge of five per cent for collecting such dues for the union.

Hours: eight per day, six days a week, a 48-hour week. *Overtime:* time and one-half for work in excess of 8 hours per day, double time for work on Sunday and on eight specified holidays and on any other day proclaimed a national holiday. All overtime shall be on a voluntary basis except in cases of agreed emergency. In any week during which a statutory holiday occurs on a week-day, employees will be guaranteed 44 hours' pay, providing they have worked the required hours during the other five days.

Vacations with pay: after one year's continuous service (a minimum of 300 days of actual work) one week, except that employees taking their vacation between November 1 and April 1 at a time designated by the employer shall receive one extra week's vacation with pay; after three years' continuous service two weeks and after 15 years' service three weeks. As far as is practicable all vacations with pay shall be allowed at the time requested by the employees between May 1 and October 1 of each year, except that employees entitled to three weeks shall take the third week at a time convenient to the management. The practice of giving an employee with more than two but less than three years' continuous service two weeks' vacations and one week's pay shall be continued.

Hourly wage rates: heads of shirt, flat work, wearing apparel and sorting units 54 cents; folders, presser, shakers, feeders, pressers and ironers, starcher, sorter,

checkers 45 to 49 cents; head checkers 54 to 64 cents, office clerks 45 to 50 cents, fireman 85 cents; dry cleaning unit—cleaner foreman $49.72 (per week) helper 71 to 74 cents, silk finisher 53 to 64 cents, presser 54 cents; wash rooms—wash room foreman $51.72 (per week), helper $36.72 (per week); wringer, wet work checker 79 to 83 cents. (The above hourly rates are 4 cents higher than the previous rates.)

Seniority: lay-offs, due to curtailment of production or a change in method, and rehiring will be conducted on the basis of plant seniority, provided the employees concerned have the requisite experience, skill and ability to do the work, while promotions will be made on the basis of seniority within departments.

Provision is made for *grievance procedure* and the *safety and health* of employees.

Public Administration—*Province of Saskatchewan—The Government of the Province of Saskatchewan and the Saskatchewan Civil Service Association (TLC).*

Agreement to be in effect from October 1, 1952, to September 30, 1953, and thereafter from year to year, subject to 30 days' notice.

Union security: maintenance of membership for all association members with a union shop for all new employees.

Check-off: the government agrees to deduct all dues, initiation fees and association assessments and levies from the pay of all association members who so authorize and to remit same to the association.

Hours: for office employees—6½ per day Monday through Friday, three on Saturday, a 35½-hour week; for all other employees—44 per week or 88 in any two-week period (except where the present working hours are less than 44). For the period from the beginning of the week in which May 1 falls to the Saturday immediately preceding Thanksgiving Day a five-day week shall be in effect, subject to such modifications as may be necessary to render prompt and efficient service to the public. The actual daily and weekly hours for the period shall be as agreed upon between the two parties, but in no case shall the weekly hours exceed those provided above. *Overtime:* time and one-half will be paid for work in excess of an employee's normal working hours, provided that less than one-half hour shall not be considered in calculating overtime. Where the current annual salary rate exceeds $3,000, the sum of $3,000 shall be used as the annual salary in calculating overtime. Employees in classes of positions whose maximum rates exceed $308 per month shall not be entitled to receive overtime, except where otherwise agreed from time to time. Overtime will not be paid to field employees whose actual hours cannot be defined.

Statutory holidays: nine specified statutory and any customary local civic holidays shall be allowed with pay. An employee who works on a holiday will be entitled to another day and one-half off or, if this cannot be granted, he will be paid, in addition to his regular pay, time and one-half for such work.

Vacations with pay: 1½ days for each completed calendar month of service from the date of employment to the following March 31, thereafter three weeks during each year of service.

Sick leave: for illness or other pressing necessity employees with less than three months' continuous service will be allowed one week's leave and those with more than three months' continuous service 18 working days' leave with pay for each year of service. Unexpended leave shall be cumulative to a maximum of 12 months. On separation employees who are not eligible for superannuation shall receive an amount equal to one-third of the unexpended sick leave accumulated from date of employment to July 31, 1951, with payment calculated on salary being paid as of July 31, 1951. Employees eligible for superannuation shall receive an amount equal to one-third of the unexpended sick leave accumulated from date of employment to November 1, 1949; however, such gratuity shall not exceed four months' salary. In the event of death of an employee amounts due him under the above provisions shall be paid to his dependents. In the case of an injury compensable under the provisions of the Workmen's Compensation Act the government will pay the employee an amount equal to one-third of the compensation payment for a period not in excess of one year.

Monthly wage rates for certain classifications: administrative, fiscal and clerical—switchboard operator $123 to $148; clerk, clerk typist, grade I $123 to $148, grade II $148 to $181, grade III $174 to $213; clerk, grade IV $204 to $251, grade V $251 to $308; clerk stenographer, grade I $128 to $154, grade II $154 to $188, grade III $174 to $213, grade IV $188 to $231; bookkeeping machine operator, grade I $143 to $174, grade II $160 to $196, grade III $174 to $213; statistical clerk, grade I $160 to $196, grade II $188 to $231; accountant, grade I $251 to $308, grade II $284 to $348, grade III $334 to $408; auditor, grade I $251 to $308, grade II $273 to $334, grade III $296 to $362, grade IV $334 to $408; economic research assistant $204 to $251; research economist, grade I $262 to $321, grade II $296 to $362; fire inspector, fire investigator, milk distribution investigator, theatre inspector $231 to $284; insurance inspector, assistant film censor, apprenticeship inspector, inspector of wages and hours $222 to $273; chief clerk and budget officer, supervisor (school grants and statistics) $273 to $334; applied sciences and engineering—engineering assistants, grade I $160 to $196, grade II $188 to $231, grade III $204 to $251, grade IV $262 to $321; research engineer, grade I $273 to $348, grade II $296 to $362, grade III $334 to $408; architect $334 to $408, highway materials engineer $408 to $493, pilot $362 to $442. The government agrees to recognize the principle of equal pay for equal work.

Cost-of-living bonus: in addition to the above rates employees will be paid $1 per point, or fraction thereof, on the difference between 177 and the Dominion Bureau of Statistics cost-of-living index for the first business day of the month; payment for the current month shall be included in the following month's pay cheque.

Shift differential: shift employees, other night watchmen and those employees rotating through three shifts, will be paid a differential of 40 cents for the second shift, and 65 cents for the third shift worked.

Northern district allowances: employees stationed at certain specified points in the Northern district will be paid an allowance of $15, $20 or $25 per month (depending on the place where they are stationed) over and above the basic rate of pay and bonus. These allowances shall not apply to employees either sleeping or eating in government operated institutions located at these points.

Provision is made for *grievance procedure, seniority rights, employment and promotional examinations* and *transfers of employees.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the amendment of six agreements. In addition to those summarized below, they include: the amendment of the agreement for tannery workers in the province published in the *Quebec Official Gazette,* November 22, 1952.

Requests for the amendment of the agreements for the fashion accessories industry at Montreal and for the men's and boys' shirt manufacturing industry, as well as for the corrugated and uncorrugated paper box industries in the province, were gazetted November 22. Requests for the amendment of the agreements for retail food stores at Quebec and for trade and office employees at Jonquière were gazetted November 29; requests for the amendment of the agreements for the building materials industry in the province and for the building trades at Montreal were published December 6.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties to certain agreements.

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Mining

Building Materials Industry, Province of Quebec

See below under "Manufacturing".

Manufacturing

Bakery Products, Quebec District

An Order in Council, dated November 19 and gazetted November 29, amends the previous Orders in Council for this industry (L.G., Jan., 1951, p. 63; May, p. 690; March 1952, p. 298).

Territorial jurisdiction now comprises the cities of Quebec and Lévis and the area within a radius of 10 miles of their limits, and within a radius of 35 miles from their limits when there are more than seven employees in the bakery. The counties of Dorchester, Bellechasse, Lotbinière and Portneuf are not governed by the agreement.

Minimum wage rates in bread bakeries: in establishments with more than six employees—head journeyman baker or assistant foreman $51 per week; in bakeries with six employees or less—head journeyman baker or assistant foreman $48 per week. Minimum rates for other classifications: doughmaker, leaven man $45 per week; ovenman $44; weigher, panner, journeyman baker $43; helpers $32; apprentices from $19 in first six months to $28 per week in third year. (The above rates are from $1 to $4 per week higher than those rates formerly in effect.) Minimum rate for occasionl journeyman baker is unchanged at $7 per day.

Severance notice: an employer must give eight days' notice of dismissal to an employee who has one month of service or more, unless dismissal is justified by employee's behaviour; an employee must give eight days' notice before leaving employer's service unless he has sufficient reason for not doing so; in the event of disputes the Parity Committee shall decide.

Food Products Manufacturing and Wholesale Food Trade, Quebec District

An Order in Council, dated November 19 and gazetted November 29, amends the previous Orders in Council for this industry (L.G., June, 1950, p. 872; Dec., p. 2066; Sept., 1951, p. 1250; Jan., 1952, p. 54 and previous issues). Another amendment was published in the *Quebec Official Gazette* May 31, 1952. The term of the present agreement, as amended, is extended to May 1, 1953, and thereafter from year to year, subject to notice.

Part I

Part I of this agreement is amended by providing that the word "manufacturers" means persons who manufacture, transform or condition food for human and/or animal consumption, as well as by the addition of the words "pork butcheries" after the words "packing houses" in certain clauses of the agreement relating to definitions, hours, night shifts and minimum wage rates, and the deletion of the classification millwright from the table of minimum rates governing this part of the agreement.

Part II

Part II governing commercial salesmen, etc., is amended by the addition of the words "town traveller". *Minimum weekly wage* rates in Zone I for commercial salesmen, etc., are unchanged at from $24 per week during first six months to $39 per week during and after the fourth year; in Zones II and III the above rates, less 10 per cent. It is now provided that previous experience in private firms engaged in the trade of products covered by this agreement will be taken into account when classifying travelling salesmen or representatives.

Part III

A new Part III governing certain food products manufacturing is added as follows:—

Industrial jurisdiction: Part III applies to all employers and employees in factories manufacturing human food products such as nuts and almonds, peanut products, etc, tea, coffee, spices, essences, baking powder, pickles, concentrated soups, syrups, potato chips, pickled tongue, sugar butter, powdered jellies, gelatin, bread powder, edible oils, chocolate, bonbons, fruit and vegetable preserves. (The above items were previously included among the exceptions to the terms of this agreement.) However, regarding candy and chocolate manufacturers exclusively, only those employees committed to the production of candies and chocolates are excluded from the terms of the present agreement.

Territorial jurisdiction comprises the cities of Quebec and Lévis and the municipalities entirely or partly included within an area comprising a radius of 50 miles of their limits; the whole divided into three zones.

Hours: stationary enginemen and firemen (other than first class enginemen)—54 per week, all year round; office employees (male and female) 44 per week; other employees—48 per week during the period from the first complete week of December to the end of the week preceding July 1, 54 per week during any other period; occasional employees (male and female), watchmen and boiler (not stationary engines) firemen, personal and administration employees and first class enginemen—no regular work week.

Overtime: time and one-half for work done in excess of 44, 48 or 54 hours per week, or for work in excess of daily limitation of hours as provided for. Certain limitations on overtime rates are provided for work done during the seasonal rush period between July 1 and November 30, as well as in the case of carters, deliverymen's helpers, etc.; double time for work on any of 9½ specified *paid holidays.* Overtime rates do not apply to occasional employees, etc.

Minimum wage rates for factory personnel: males—general hand (20 years or over, first year) 73 cents per hour in Zone I, 66 cents in Zone II, 62 cents in Zone III; general hands (20 years or over, one year or more) 80 cents in Zone I, 72 cents in Zone II, 68 cents in Zone III; junior workers (less than 20 years) 60 cents in Zone I, 54 cents in Zone II, 51 cents in Zone III; stationary enginemen (fourth class), truckdriver 85 cents in Zone I, 77 cents in Zone II, 72 cents in Zone III; firemen 75 cents in Zone I, 68 cents in Zone II, 64 cents in Zone III; millwright, confectioner 89 cents in Zone I, 80 cents in Zone II, 76 cents in Zone III; roaster, shipper 87 cents in Zone I, 78 cents in Zone II, 74 cents in Zone III; cooper 94 cents in Zone I, 85 cents in Zone II, 80 cents in Zone III; assistant confectioner 83 cents in Zone I, 75 cents in Zone II, 71 cents in Zone III; occasional hands (boys) 50 cents in Zone I, 45 cents in Zone II, 43 cents in Zone III; (men) 60 cents in Zone I, 54 cents in Zone II, 51 cents in Zone III; females—general hand (first year) 49 cents in Zone I, 44 cents in Zone II, 42 cents in Zone III; (second year) 55 cents in Zone I, 50 cents in Zone II, 47 cents in Zone III; occasional hand 50 cents in Zone I, 45 cents in Zone II, 43 cents in Zone III. *Minimum weekly rates* for office personnel and for travelling salesmen: accountant $48 per week in Zone I, $43.20 in Zone II, $40.80 in Zone III; stenographer-typist from $22 during first year to $31 during fourth year in Zone I, from $19.80 to $27.90 in Zone II, from $18.70 to $26.35 in Zone III; in general work from $19 in first year to $25 during third year in Zone I, from $17.10 to $22.50 in Zone II, from $16.15 to $21.25 in Zone III; travelling salesmen from $27 during first six months of sale in the line to $42 per week during and after fourth year. Weekly wage rates shown above will be paid even if business hours are fewer in number, regularly or not, than those shown above in this agreement. Minimum wages, actually paid to employees, higher than those provided for in this agreement will not be reduced for the duration of the agreement.

Vacation: one week (six consecutive days) to every employee who, on April 30 of each year, has one year of service for the same employer or in the same establishment; every employee with less than one year of service is entitled to a vacation with pay equal to one-half day off per month of service; upon termination of employment every employee is entitled to vacation remuneration equal to two per cent of the wages earned by him during the vacation credit period. In Zone I only, employees with five years of contiinuous service are entitled to an additional week of vacation with pay (six days, consecutive or not, depending on previous agreement between the employer and employee) to be given at any time, but in the same year and paid at the rate of four per cent of the wages earned during such period; termination of employment entitles an employee to four per cent of wages earned during vacation credit period. Occasional hands are entitled to two per cent of wages earned during their period of employment, in lieu of vacation with pay. Provisions of Ordinance 3, revised, of the Minimum Wage Commission respecting annual vacations with pay, not inconsistent with the provisions of the present section will apply to the establishments governed by the present agreement.

Men's and Boys' Clothing Industry, Province of Quebec

An Order in Council, dated November 19 and gazetted November 22 amends the previous Orders in Council for this industry (L.G., April 1949, p. 450; June, p. 735; Nov. 1950, p. 1903; June 1951, p. 827; July, p. 976; May 1952, p. 610; Oct., p. 1361, and previous issues). The Rainwear and Sportswear Manufacturers' Association is added to the list of contracting parties.

Industrial jurisdiction is amended as follows:—Schedule II, class B garments will now include raincoats, water-repellent trench coats and Hollywood coats, station wagon coats, cardigans, ski suits, capes, bush jackets, surcoats beach coats, jerkins and other similar garments, when such garments are made of cotton, rayon and/or synthetic materials or mixtures thereof, or manufactured by a section system which now provides (in addition to other regulations which are unchanged) that to qualify for class B, at least three of the following operations must be omitted in the manufacture of the garment: shaping, basting of facing, basting of lining, basting of edges and of armholes. (Other provisions of this agreement remain unchanged.) The list of garments excepted from the terms of this agreement is revised by deleting the word "workmen's" preceding the words "windbreakers" and "mackinaws".

Minimum wage rates for work done on class B garments are unchanged from those formerly in effect and summarized in the LABOUR GAZETTE, October 1952.

Cost-of-living bonus: odd pants and class B garments only—employers producing in an amount exceeding 25 per cent of their total production, garments not covered by this agreement, will pay to their employees a cost-of-living bonus of 20 cents per hour as formerly. However, it is now specified that should any employer, in any three-month period, produce less than 25 per cent of garments covered by this agreement, such employer will pay to his employees an additional 2½ cents per hour as a cost-of-living bonus. Class B garment manufacturers may incorporate the cost-of-living bonus of 20 or 22½ cents per hour, as the case may be, in the hourly or piece work rates paid to their employees. In the event that a manufacturer elects to include the cost-of-living bonus of 22½ cents per hour in the hourly or piece work rates, then the minimum hourly rates are those of schedule II (L.G., Oct. 1952), increased by 22½ cents per hour. (Other cost-of-living bonuses, including the general bonus of 28½ cents per hour, are unchanged.)

Provisions of this agreement governing apprenticeship and gradual promotion will apply to manufacturers of class B garments.

Building Materials Industry, Province of Quebec

An Order in Council, dated November 19 and gazetted December 6 amends the previous Orders in Council for this industry (L.G., June 1950, p. 872; Aug., p. 1185; Dec., p. 2067; Nov., 1951, p. 1539).

Granite Industry

Minimum hourly wage rates are increased by 10 cents per hour over those rates previously provided for (L.G., Nov. 1951, p. 1539) and the new rates are now as follows: granite cutter, letterer and designer on composition, journeyman—granite cutter on surfacing or sandblasting machines $1.50 in Zone I, $1.35 in Zone II; in Zones I and II—surfacing machine operator, sandblast operator $1 per hour; blacksmith $1.15; machine polisher, carborundum machine operator $1.05; hand polisher, stationary engineman's assistant, fireman 85 cents; apprentice polisher (maximum one year) 80 cents; hoist and crane operator, gang saw operator, stationary engineman 95 cents; quarry man (driller), labourer and helper, boxer (crater) 90 cents; apprentices from 75 cents in first six months to $1.15 in third year. Minimum rate for watchman is unchanged at $30 per week.

This amendment further provides that on April 1, 1953, all minimum hourly rates shown above will be automatically increased by five cents per hour.

The present amendment also provides that workmen employed extra hours by an employer, other than his employer of the regular shift, will be paid overtime rates. It is also provided that contracting parties to the present agreement (granite section) may submit, if deemed advisable, a petition for amendment or a new agreement, at the expiry of their initial agreement.

Trade

Retail Food Stores, Quebec District

An Order in Council, dated November 19 and gazetted November 29 amends the previous Orders in Council for this industry (L.G., Sept. 1950, p. 1680; Sept. 1951, p. 1253, and previous issues). Other amendments extending the term of the present agreement were published in the *Quebec Official Gazette* May 31, August 9 and October 4, 1952. The present agreement, as amended, will remain in force until February 28, 1953, and thereafter from year to year, subject to notice.

Hours: regular weekly hours are unchanged at 53½ per week.

Minimum wage rates for employees paid on an hourly basis are from two to seven cents per hour higher than those previously in effect and those rates for employees paid on a weekly basis are from $1 to $6.50 per week higher. New minimum wage rates for certain classifications are now as follows: employees engaged in the sale of meat or meat products in Zone I—class A (male) $48 per week; (female) $35.27, class B (male) $41; (female) $31.85, class C (male) $34; (female) $25.85, class D (male) $20; (female) $21; in Zone II minimum weekly rates for classes A, B, C, and D are $34, $28, $23 and $18 per week respectively; employees engaged in the sale of other food products in Zone I—classes A and B (male and female) and class C (female only) receive $3 per week less than the rates shown above for similar classifications engaged in the sale of meat or meat products, class C (male) receives $4 per week less and class D (female) 50 cents per week less, class D (male) receives the same weekly rate; in Zone II minimum rates for classes A, B, C, and D are similar to those shown above for employees engaged in the sale of meat or meat products. Other minimum weekly rates include qualified tradesmen (not governed by the agreement) $35; bachelor delivery man and married

Legal Decisions Affecting Labour

Findings of Labour Relations Boards reversed by British Columbia and Quebec courts. Employer convicted of violation of Minimum Wage and Annual Holidays Acts loses appeal in Saskatchewan. Union must abide by its constitution in disciplining members, New Brunswick court holds

The British Columbia Appeal Court has reversed the decision of the Supreme Court in the case involving the certification of a bargaining agent for Safeway central office employees. The Supreme Court had found that an employee having access to confidential information was not necessarily a person "employed in a confidential capacity". Legislation excludes persons so employed from collective bargaining.

The Quebec Superior Court has ruled against the Labour Relations Board in a case in which an employer charged that the Board's conduct of a hearing was unfair. The Board failed to establish its claim that it had acted properly within its authority and therefore was not subject to court review.

In a decision dealing with the enforcement of the province's Minimum Wage and Annual Holidays Acts, the Saskatchewan Court of Appeal has dismissed an appeal by an employer convicted of violation of the Acts.

A union has been penalized by the New Brunswick Supreme Court, Chancery Division, for violating the rights of one of its members.

These cases are summarized in greater detail below.

British Columbia Court of Appeal . . .

...holds Labour Relations Board erred in finding comptometer operators not confidential employees

The British Columbia Court of Appeal on October 24 quashed the order of the provincial Labour Relations Board certifying a bargaining agent for comptometer and power-machine operators employed in the central office of Canada Safeways Limited. The judgment allowed the appeal brought by the company against a decision of the British Columbia Supreme Court upholding the Board's ruling (L.G., Oct. 1952, p. 1369). The Appeal Court held that the Board had exceeded its jurisdiction, since the employees affected were employed in a confidential capacity and so were excluded from collective bargaining under the Industrial Conciliation and Arbitration Act.

The appeal was heard by three judges of the Court. Chief Justice Sloan set out the facts of the case. The appellant company operates 54 retail stores in British Columbia, selling chiefly groceries and meats. A group of employees in the company's central office assemble periodical reports submitted by the individual retail outlets and make a compilation of them for the use of the management. Local 580 of the Retail, Wholesale and Department Store Union (CIO-CCL) applied for certification on behalf of this unit of office employees, composed mainly of comptometer and power-machine operators. The company opposed the application, on the ground that the employees were employed in a confidential capacity, but the Board issued certification on March 24, 1952, giving reasons for its decision.

The Chief Justice found that the Industrial Conciliation and Arbitration Act imposed on the Board the duty to determine whether a unit of employees is appropriate for collective bargaining. However, its jurisdiction to make that decision depended on certain conditions, one of which was that the unit must be composed of employees within the scope of the Act.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

In the case of the employees in the Safeway central office, the preliminary question facing the Board was whether all or any of them came within the class excluded by Section 2 (a) of the Act, persons "employed in a confidential capacity".

Taking into consideration the Board's reasons for decision, His Lordship stated that the Board had apparently found that, if the Act were to be interpreted "in the strict sense," these employees would be ruled out of any proposed bargaining unit. The Board then went on to state, however:

> Modern business practice and the emergence of large office organizations require a broad approach to this problem if the Industrial Conciliation and Arbitration Act is to be reasonably interpreted. Obviously one, or a few persons, could not be expected to deal with the mass of intimate information required in today's management office organization. Thus, nearly all employees in such an office handle, or have access to, confidential information.

The Board concluded that, while there was merit to the employer's case, justification existed for certifying a bargaining agent on behalf of the comptometer and power-machine operators.

His Lordship considered that the facts were not reasonably capable of supporting the Board's decision that the employees in question were not employed in a confidential capacity. In his view, the consideration of "modern business practice and the emergence of large office organizations" was not relevant to the problem, which must be determined according to the terminology of the Act itself. In His Lordship's words:

> The nature of the tasks assigned must be the test contemplated by the Act and that same test must apply to all classes of business whether ancient or modern, large or small. As I have said, the facts herein point irresistibly to only one conclusion. Any other simply demonstrates that the Act has been misconstrued by the Board and that it has thereby exceeded its jurisdiction.

The Chief Justice then dealt with the argument of counsel for the Board that the Act provided that a decision of the Board as to whether a person was an employee within the meaning of the Act should be final and conclusive. In His Lordship's view, the Board's decision was final only when it had acted within its jurisdiction. In this case the Board had exceeded its jurisdiction.

Mr. Justice O'Halloran similarly held that the Act did not take away the power of the courts to review a decision of the Board on *certiorari*. However, the courts were not entitled to quash a decision unless the Board had acted without jurisdiction, in excess or in abuse of its jurisdiction, in violation of an essential of justice (such as in the "teeth of the evidence") or had erred in law.

Considering the Board's decision in this case, Mr. Justice O'Halloran held that the Board had erred in law by giving the ICA Act an interpretation it does not permit and by giving a decision in the "teeth of the evidence".

In his view, the words in the Act "persons employed in a confidential capacity" meant employees in a position likely to be aware of the state of any confidential aspect of an employer's business affairs. The statute did not restrict the term to a person in an executive position, or to one who must exercise a discretion on behalf of his employer, or whose duty is to use confidential information in an operative way. His Lordship considered that employees engaged in dealing with confidential business information cannot be assumed to act purely as automatons in compiling, recording and summarizing that information, whether they do it with or without mechanical machines. He was also of the opinion that the word "capacity" was significant, since it related to the receptive powers of receiving, containing, absorbing. He concluded:

> The statute in using the words "employed in a confidential capacity" selected language of an expansive tendency as contrasted to a contractive one for the purpose of describing a narrow concept, and purposely refrained from attaching to that language any limitation of degree or qualifications of any kind . . . In its ruling in this case, the Board in my judgment has taken upon itself the power to rewrite the statute, by reading into it something legitimate construction of its language does not permit a court to do.

Mr. Justice O'Halloran then gave reasons for his view that the Board had made its decision in the "teeth of the evidence". The evidence included exhibits of 31 of the company's printed forms for tabulating a vast amount of detail of the company's business operations, to be filled in by the employees in question and then summarized by them. His Lordship referred to a balance sheet which summarized the company's fixed assets, current assets, current liabilities, accounts, cash in banks and on hand, and detail of inventories. Other tables showed not only the nature of profits and losses in each store but the net earnings per period compared with those of the previous period and the same period the year before.

His Lordship stated that these figures would give a rapid picture of the company's financial position and were therefore of a highly confidential character. No tribunal could conclude that the printed forms were not of a confidential nature without departing from the realities of business life. He held accordingly that the Board had allowed extraneous considerations to mislead its judgment in the "teeth of the evidence" and thus to exceed its jurisdiction.

Mr. Justice Bird concurred in the reasons for decision of the Chief Justice. The Court allowed the company's appeal and quashed the certification issued by the Board. *In re Canada Safeway Limited and Labour Relations Board et al,* [1952-53] 7 WWR (NS), 145.

Quebec Superior Court . . .

...finds procedure of Labour Relations Board in a certification hearing was unfair to employer

The Quebec Superior Court, on July 4, 1952, dismissed with costs the pleading submitted by the Quebec Labour Relations Board, the defendant in an action brought by an employer for a writ of prohibition and a declaration that the Board's procedure during the hearing of the employees' association's application for certification was invalid.

Mr. Justice Gibsone gave the judgment of the Court. The plaintiff in the case was a clothing manufacturer doing business at Quebec and Sorel. An agreement concerning working conditions was in effect between the employer and an association of his employees. On February 18, 1952, this association applied to the Quebec Labour Relations Board for certification. The Board informed the employer that an investigator would visit his establishments to get information to enable the Board to decide whether the proposed bargaining unit was appropriate, and asked for a list of employees in the unit. On April 4 the employer and the association were notified to attend the hearing of the application on April 24.

At the hearing the Board announced that it had received written representations from the National Clothing Syndicate of Sorel Inc. setting out facts which the syndicate intended to produce as evidence at the hearing of the association's application for certification. The Board refused to divulge what these representations were and permitted the syndicate to present its evidence.

According to the employer's claim, the whole session was devoted to the hearing of this evidence, which consisted of an attack against him and his business. He had objected formally to the Board's method of procedure at the hearing. He claimed that it was unfair and *ultra vires,* holding that the Board's duty was only to determine whether the employees' association had as members a majority of the employees in the unit by examining its books and records. In his view the Board was not entitled, apparently on its own initiative and without notifying him, to recognize this other union as an intervener and to admit its evidence at the hearing.

The employer stated that it was apparently the intention of the Board to apply Sections 20, 21 and 22 of the Labour Relations Act against him, the sections which forbid an employer to dominate or hinder the formation or activities of a union, or to seek to compel an employee to refrain from becoming or to cease to be a union member by threats or intimidation. He argued that under the Act the only remedy against unfair labour practices was prosecution with the consent of the Board or the Attorney General. Section 50 of the Act enables the Board to dissolve an employers' association guilty of seeking to dominate the activities of a trade union, but only after giving it an opportunity to be heard and to give evidence.

In its defence, the Board maintained that its decisions, procedures and acts were not subject to control by the courts and could not be set aside. It pointed out that the Labour Relations Act expressly prohibits the issuing of prerogative writs against the Board. It argued also that the plaintiff had no legal right to bring an action against the Board since there was no legal bond between them and that the facts alleged by the plaintiff were not adequate grounds for his claims.

The Court held that the immunity from judicial control afforded the Labour Relations Board by the Act was valid only when the Board acted within the limits set out in the Act. In this case the Board had exercised powers not given it by the Act. In Mr. Justice Gibsone's view, the plaintiff was therefore entitled to have his claims that the Board's conduct was unfair, arbitrary and injurious to him judged on their merits.

His Lordship held also that the plaintiff was entitled to bring the action because he had a natural interest in protecting the agreement between him and the employees' association, an agreement which might be

broken as a result of the Board's procedure and decisions. Finally, Mr. Justice Gibsone considered that the facts did justify the employer's claim.

The Court accordingly dismissed the Board's pleading with costs. *Maurice Pollack* v. *the Labour Relations Board of the Province of Quebec,* Quebec Superior Court, July 4, 1952, unreported.

Saskatchewan Court of Appeal . . .

. . . dismisses appeal by employer from conviction under the Minimum Wage and Annual Holidays Acts

The Saskatchewan Court of Appeal on October 22, 1952, dismissed an employer's appeal from convictions under the Minimum Wage Act and the Annual Holidays Act.

The appeal was heard before five judges of the Court. Mr. Justice Procter stated the facts in his reasons for decision. The appellant had been charged before a police magistrate of the city of Regina for failure to pay the statutory minimum wage and the required annual holiday pay, equal to one twenty-sixth of a year's wages, to his caretaker, a full-time employee. The magistrate found him guilty on both charges and imposed a fine in addition to ordering payment of the amounts due to the caretaker under the Minimum Wage Act and the Annual Holidays Act. The employer then appealed to the District Court of Regina, where a new trial was held and both appeals dismissed. From that judgment, an appeal to the Court of Appeal was permissible on a question of law alone.

The employer claimed that, as part of her duties as a caretaker, the complainant operated a steam-heating boiler of more than 20-horse-power capacity, for which she did not possess the certificate required by the Saskatchewan Boiler and Pressure Vessel Act. He maintained that, since the judge of the District Court had found this as a fact, he should have held that the contract of employment was illegal and that therefore the caretaker could not take advantage of the provisions of the two statutes. He claimed further that the caretaker was an independent contractor and not an employee within the meaning of the Acts, but the Court refused to hear this ground of appeal because it had not been raised before the District Court judge.

Mr. Justice Procter considered unjustified the employer's claim that the trial judge had found as a fact that the caretaker did operate a boiler unlawfully as part of her duties. He held accordingly that the Appeal Court was without jurisdiction to hear the appeals, since the question of law which the appellant sought to determine was not properly before the Court. Mr. Justice McNiven and Mr. Justice Culliton concurred in his reasons for judgment.

Chief Justice Martin raised the question of whether, if it had been definitely established that the contract of employment violated the Boiler and Pressure Vessel Act, the appellant could successfully claim the illegality of the contract as a defence to the charges against him of violating the Minimum Wage Act and the Annual Holidays Act. He did not answer this question but stated that he would require authority binding upon him before answering it in the affirmative.

Mr. Justice Gordon referred to the provisions of the two Acts requiring a magistrate, when convicting an employer of an offence against either statute, to order him to pay his employee the difference between the sum actually received and that to which he was entitled. His Lordship stated that the Acts were designed to protect a class which may not always be in a position to bargain with employers.

The Court dismissed the appeals without costs. *Regina* v. *Pantel,* [1952] 7 WWR (NS) 295.

New Brunswick Supreme Court, Chancery Division . . .

. . . awards damages to longshoreman for penalties imposed by his union contrary to its Constitution

The New Brunswick Supreme Court, Chancery Division, on November 3 allowed a longshoreman's action for a declaration that he was still a member in good standing of his local union in spite of a decision of a union executive board declaring him ineligible to run for office. The court held that declaration to be invalid, since it was not made in accordance with the union constitution, and awarded the plaintiff $300 damages for the annoyance he had suffered, in addition to the costs of the action.

The facts were set out in Mr. Justice Hughes' reasons for judgment. The plaintiff, William Carlin, was a member of Local 273 of the International Longshoremen's Association (AFL-TLC). On September 6, 1949, the international president of the union wrote to the president and the secretary of Local 273 informing them that Galbraith, the vice-president of the local union, was going to bring charges against Carlin and that if the charges were

substantiated he should be severely disciplined "as his reported actions were not only detrimental to the membership of the port of Saint John but to the Atlantic Coast District as a whole". [Carlin was president of Local 273 at the time of the Canadian Seamen's Union strike in 1949 and had supported the strike.] If he were allowed to retain his membership, he should be prevented from holding office for a period of five years. Disciplinary action would be taken in accordance with Article XVIII of the constitution of the international union.

Charges were brought against Carlin by Galbraith and were heard by the local union on October 3, 1949. By a vote of the members he was exonerated, 52 finding him guilty and 97 not guilty. In spite of this, the international president instructed the officers of the local to expel him immediately.

Carlin then brought an action for an injunction to prohibit his expulsion. An interim injunction was issued. At a hearing on November 30 to determine whether or not the injunction should be continued, a settlement was reached and Carlin's action was withdrawn. He was reinstated as a member in good standing with the approval of the international president and the local vice-president who had brought the charges.

Almost immediately after the settlement, new charges almost identical with the earlier ones were laid against Carlin. On December 20 the executive of the local union tried the charges and found him guilty. The hearing was adjourned until January 3, 1950, when a penalty was imposed suspending Carlin from the right to vote and to attend meetings for a period of five years.

Both parties appealed against this ruling, Carlin against the whole decision and Galbraith against the penalty as not being severe enough. A meeting of the local allowed Carlin's appeal by a vote of 134 to 83. No action was taken on Galbraith's appeal. His Lordship stated that, under Article X of the union constitution, the matter was thus settled subject only to a right of appeal to the Atlantic Coast District Executive of New York. This right of appeal may be had on definite and precise conditions, none of which were followed.

Galbraith, however, appealed to the Atlantic Coast District Executive, which on March 13, 1950, declared Carlin ineligible for office for five years. Carlin was not present and no notice of appeal had been served on him.

In July 1951, attempts were made to persuade Carlin to agree not to run for office for five years but he refused. He was elected a delegate to a convention and attended as a delegate. On October 1, 1951, the president of Local 273, at a meeting to elect delegates to a wage committee, read the statement of the Atlantic Coast District Executive of March 13, 1950, and refused to accept Carlin's nomination. This was the first time Carlin had heard of the ruling. He challenged it and examined the report, which was not signed.

Mr. Justice Hughes stated:

> The powers which the International Longshoremen's Association, Local 273, can exercise over a member of the union are what the said member gives the Association by becoming a member and accepting the constitution. Those powers include the right to work. If he is not a member of the Association he cannot work with them and cannot be employed on the same job. If they expel him, therefore, they deprive him of his livelihood. They can do so only as laid down in the constitution. They must act strictly within their rights. They have not done so.

In this case the charges against Carlin had been heard by the local and he had been exonerated on October 3, 1949. That was the end of the matter unless that decision was reversed on appeal. Since no appeal was made in accordance with the constitution, the question was settled. His Lordship held. The international president had no power under the constitution to order the expulsion of Carlin, as he first attempted to do. The declaration of the Atlantic Coast District Executive that Carlin was ineligible to run for office in the union was invalid because it was not made on an appeal taken by means of notices as provided for by Article XIX of the constitution.

The Court accordingly held that the proceedings of the District Executive of the union declaring the plaintiff ineligible to run for office were inoperative and that he was a member in good standing of Local 273 with all the rights and privileges of membership. The plaintiff had not lost his employment since his reinstatement as a union member on November 30, 1949, but he was entitled to damages for the annoyance caused him by the defendants' action. The Court assessed these damages at $300. *Carlin* v. *Galbraith et al*, New Brunswick Supreme Court, Chancery Division, Nov. 3, 1952, unreported.

Recent Regulations, Federal and Provincial

Minimum wages raised for janitors and sheet-metal workers in British Columbia. Apprenticeship regulations revised in Nova Scotia. The procedure for certification of bargaining agent established in P.E.I.

In British Columbia, an upward revision of minimum rates was provided for janitors and sheet-metal workers.

In Nova Scotia, general apprenticeship regulations set out what is required of the apprentice and the employer and define the powers and duties of the Director of Apprenticeship.

The first regulations to be made under the Prince Edward Island Trade Union Act provide for certification by the Provincial Secretary of a trade union as bargaining agent for a group of employees.

Minor amendments were made to the Rules of Procedure of the Labour Relations Boards of Nova Scotia and Ontario.

These and other regulations, both federal and provincial, are summarized in greater detail below.

FEDERAL

Canada Shipping Act

Pilotage By-laws

An amendment to By-law 2 of the Pilotage District of Quebec exempts from the compulsory payment of pilotage dues all steamships regularly employed in voyages on the St. Lawrence River and on the Saguenay River not extending below the eastern limits of the Pilotage District. Previously, only passenger steamships employed in such voyages were exempt. The amendment was approved by P.C. 4592 on December 4 and gazetted December 10.

PROVINCIAL

Alberta Coal Mines Regulation Act

New sections covering the use of milli-second delay action detonators were added to the regulations governing the care and use of explosives under the Coal Mines Regulation Act by an Order in Council (O.C. 1708-52) made December 1 and gazetted December 15.

The regulations now provide that milli-second delay action detonators may be used for firing shots in coal if permission in writing has been obtained from the Director of Mines to use such detonators and to take into the mine sufficient approved explosives for the purpose.

The multiple shot-firing device used with milli-second delay action detonators must also be approved by the Director. Every galvanometer and shot-firing device in use must be tested daily by an approved method and must not be used unless found to be in proper working condition.

The shot-firer must be trained thoroughly in all phases of milli-second multiple blasting methods. He must be certified as competent in the use of such methods by the District Inspector after he has passed an examination which included practical tests under actual working conditions.

The shot-firer must test for inflammable or noxious gases immediately before the holes are charged, immediately before the round is fired and immediately after he returns to the face following the firing of shots. Gas detector readings must be taken by a certificated examiner with an approved detector in addition to flame safety lamp tests. No shot must be fired if a test or reading shows that there is a dangerous amount of inflammable gas or dust in the air at the face or the roadway leading to the face.

Shots must be connected in series. At the time of firing, all persons must take refuge in a safe place at least 100 feet from the shots. No person may return to the face for at least four minutes after the shots are fired nor resume work until it is found safe to do so. This minimum period may be increased by the District Inspector if he thinks it is desirable to do so.

Other provisions cover such matters as the type of conductors used in the shot-firing cable, the amount of explosives which may be taken into the mine and the method of storing them, galvanometer testing, and rock dusting.

British Columbia Hours of Work Act

A minor amendment was made to the schedule to the Hours of Work Act which

lists the industries in which workers may not be employed for more than eight hours a day and 44 hours a week, except in special circumstances.

Clause 1 of the schedule now reads "mining, quarrying, and other works for the extraction of minerals, *stone or other material* from the earth". The italicized words are new. The amendment was made by Regulation 38 on November 28 and gazetted December 4.

British Columbia Male and Female Minimum Wage Acts

The minimum rates for men engaged in the sheet-metal industry and for janitors and janitresses working in apartment buildings were increased by two revised orders (Nos. 10 and 43), gazetted December 11 and December 18, respectively.

Janitors in Apartment Buildings

Effective from February 1, 1953, janitors and janitresses in apartment buildings containing four residential suites or less must be paid a minimum of 55 cents an hour instead of 50 cents, as before.

In buildings with more than four suites the minimum rate is, as previously, fixed on a monthly basis according to the number of suites. These rates were all raised by about 10 per cent and now range from $39 a month for five residential suites to $197 a month for 47 or more suites. In buildings containing five or more suites, the janitor must receive, in addition to the above rates, 55 cents an hour (rather than 50 cents) for all time spent in attending to single rooms, stores or accommodation other than residential suites.

As before, if two or more janitors are employed in an apartment building and reside on the premises, the employer must designate and record on the payroll at least one as resident janitor and pay him the minimum monthly rate specified according to the number of suites. If more than one are designated as resident janitors, each must be paid the minimum rate to which he is entitled. It is now made clear that the other janitor or janitors resident on the premises must receive at least 55 cents an hour.

The order no longer fixes maximum deductions which may be made from the minimum rates for accommodation provided for the janitor. The Board of Industrial Relations is authorized, where it is of the opinion that the accommodation is unsuitable or that the charge is unreasonable, to give notice in writing of the facts to the employer and also to specify the deductions which the employer may make.

As before, when a janitor is supplied with electricity, a maximum of $4 a month may be deducted from his wages or, as an alternative, meters may be installed and the janitor must pay for the consumption of the electricity according to the meter.

The weekly rest provisions are continued in the revised order. A weekly rest of 24 consecutive hours must be granted to a janitor in an apartment building containing 20 or more suites, and eight consecutive hours of rest if he is employed in a building containing from 12 to 19 suites.

Sheet-Metal Workers

The minimum hourly rate for sheet-metal workers was raised from $1 to $1.25. Time and one-half the regular rate must be paid for hours in excess of eight in a day or 44 in a week and such overtime may only be worked under permit of the Board. All male employees engaged in the manufacture, erection and installation of any sheet-metal work in connection with a residential, commercial or industrial building, plant or ship and also the manufacture or installation of gravity or forced-air heating or conditioned-air installation are covered by the order. Production-line or assembly-line manufacture of sheet-metal products for resale is excluded.

Other conditions of work set out in the former Order, which is now rescinded, remain unchanged (L.G., 1948, p. 1134).

British Columbia Metalliferous Mines Regulation Act

A new regulation (O.C. 2878) was approved on December 2, gazetted December 18, under the Metalliferous Mines Regulation Act permitting workers employed in metallurgical works and quarries to work longer than eight hours in any 24 for the purpose of changing shifts.

The Act limits hours of employment in or about mines, quarries or metallurgical works to eight in any 24 hours but authorizes the Lieutenant-Governor in Council, on the recommendation of the Minister of Mines after an investigation, to substitute other provisions by regulation.

The new regulation provides that, after any existing collective agreement expires, or where no collective agreement is in force at the time the regulations were approved, an employee may be employed above ground at a quarry or metallurgical works for whatever period longer than eight hours in any 24 is necessary to make a change

of shift provided that an agreement is made between the employer and the employees permitting such extension of hours. If a collective agreement was in effect on December 2, such longer hours can be worked until the agreement expires, provided that it does not specifically forbid such an arrangement.

The new regulation does not apply to operations covered by two earlier Orders which allow a 10-hour day to be worked in quarries and in placer mining above ground if a permit has been obtained from the Department of Mines. Workers in quarries for whom no such permit was issued would therefore be covered by the new regulation.

Nova Scotia Apprenticeship Act

New general apprenticeship regulations were approved by Order in Council on September 11, 1952, replacing those made in 1945. The regulations were issued under the new Act passed at the 1952 session of the Legislature to provide a more workable basis for the apprenticeship program (L.G., Oct. 1952, p. 1364).

The new regulations, which are similar to the ones they replace, cover minimum qualifications for apprentices, transfers from one employer to another, the period of apprenticeship and credits given for previous instruction or experience, the obligations of the apprentice and of the employer, trade testing of apprentices and tradesmen who apply for certificates of competency, and fees. In line with the new Act, which defined the powers and duties of the Director of Apprenticeship more specifically, several of the powers formerly held by the apprenticeship committee are now transferred to the Director.

In order to enter into a contract of apprenticeship in a designated trade, the prospective apprentice must be at least 16 years of age and must have completed grade eight, or any higher grade required by the rules governing the trade concerned, or have an equivalent education as determined by the Director.

The employer must forward three copies of each apprenticeship agreement to the Director. After the agreement is registered, the Director retains one copy and sends one to the employer and one to the apprentice.

When an apprentice is permanently transferred from one employer to another, a form of permanent transfer must be executed in triplicate by the apprentice and the employer and the transfer registered in the same manner as a new agreement. It is now specified that the form of transfer must be executed within 30 days from the date of the transfer.

The length of the apprenticeship period must be set out in the agreement. If the apprentice has had previous experience in the trade or trade instruction in an educational institution approved by the Minister, the Director (rather than the apprenticeship committee) may grant him a time credit on the term of his agreement. The time credit may be granted on the basis of an evaluating examination or by such other means as are stated in the trade regulations.

The Director (formerly the committee) must furnish every apprentice with an identification card to be carried at all times.

Each apprentice must give faithful service to his employer during the apprenticeship period; avoid damage and waste of tools, goods and property of the employer; give satisfactory reason for any absence from employment or from instruction in trade subjects; and diligently follow the classroom instruction or correspondence courses related to his trade which are prescribed under the Act.

Every employer must provide adequate training for the apprentice in all job operations and trade processes as far as he is able to do so; keep him employed as long as work is available; where a full-time program requires his continuous attendance, release the apprentice from his duties, and where a part-time program is provided, allow the apprentice time to attend the classes without loss of pay; and notify the Director before making any change affecting the agreement. In addition, where an apprentice is laid off because of lack of work, the employer must give him the opportunity to be re-employed before another apprentice is hired.

The Minister (formerly the apprenticeship committee), may establish facilities for conducting trade examinations for apprentices and tradesmen who apply for certificates of qualification. The Director is required to make arrangements for conducting trade examinations at times and places to be determined by him. Each trade examination is to be conducted by a board of three persons, two of whom must be members of the local apprenticeship committee and represent employers and employees; the third must represent the committee. The Minister must direct the payment of reasonable compensation and expenses for such examining boards.

When the apprentice has satisfactorily completed the apprenticeship period and

the prescribed training, he must submit himself for the final trade examination. If he is successful, he is granted a certificate of apprenticeship by the Director.

A tradesman, other than an apprentice in training, who wishes a trade examination and certificate of qualification must apply in writing to the Director who must notify him in writing of the time and place of his test, which must be held not later than three months after he has applied for it. A certificate of qualification must be issued if the examination shows that he possesses the knowledge and skill of a journeyman in the trade. If he is not thoroughly competent, his ability will be evaluated in terms of the percentage of time necessary for an apprentice to complete the training to become a journeyman.

The fee for an examination and certificate of qualification remains at $5, and, for a duplicate certificate, $2.

Nova Scotia Trade Union Act

The Nova Scotia Labour Relations Board made a small amendment to its Rules of Procedure on September 16, 1952, which was approved by the Lieutenant-Governor in Council on October 10.

Where an application for certification was made by a union, the rules previously required the Chief Executive Officer, after the time fixed for the filing of a reply by the employer and of notices of intervention, to notify the applicant and employer, and intervener if any, of the time and place fixed by the Board for consideration of the application. He is now required to give such notice only when the Board considers it necessary to bear verbal evidence and argument by or on behalf of the parties.

Ontario Disabled Persons' Allowances Act

An amendment was made to the regulations under the Disabled Persons' Allowances Act to increase the maximum annual income which a married person living with his spouse may have in order to receive an allowance.

The Act, which was passed last year (L.G., Aug. 1952, p. 1092), provides for the payment of an allowance of not more than $40 a month to permanently and totally disabled residents of Ontario between 18 and 65 years of age. To receive an allowance, a person must have resided in Ontario for 10 years.

A married person living with his spouse is now eligible for an allowance if his income, including the allowance, is not more than $1,440 a year, instead of $1,200. If the annual income is more than that amount, the allowance will be reduced accordingly. The annual income permitted a single person remains at $720.

Ontario Labour Relations Act

The Ontario Labour Relations Board has issued regulations (329/52), gazetted November 29, making amendments to the Rules of Practice and Procedure of the Labour Relations Board. New provisions set out the procedure to be followed by an employee or group of employees who do not desire an applicant union to be certified as their bargaining agent.

Such employees may inform the Board in writing of their desire before the expiration of the eighth day after the notice of application was posted by the employer on his premises; they may then attend and be heard at the hearing. If the employee or group of employees fails to attend the hearing, the Board may dispose of the application without further notice to them and without taking their objection into consideration. The written notification to the Board must be signed by the employee, if there is only one, or by each member of the group. The employees may appoint a representative to attend and be heard at the hearing.

Amendments were also made to some of the forms to be used in connection with the application of a union to be recognized as the bargaining agent for a group of employees, or an application for the termination of bargaining rights. Notices of application for certification and for a declaration that a union is no longer representative of the employees in the bargaining unit are required to be posted in a conspicuous place on the employer's premises until the expiration of the eighth day after they are served instead of for five working days, as formerly.

Prince Edward Island Trade Union Act

Under Section 14 of the Trade Union Act, which provides for the making of regulations "governing the recognition by employers of trade unions," regulations were recently made giving the Provincial Secretary certification powers similar to those held by the Labour Relations Boards of the other provinces. Until now there was no provision in Prince Edward Island for certifying a bargaining agent for a group of employees. The regulations were made November 17 and gazetted November 22.

The regulations state that no employer is required to recognize or bargain with a union until, in accordance with Section 7

of the Act, it has filed with the Provincial Secretary a certified copy of its constitution, rules and by-laws or other documents giving a complete statement of its objects.

The Provincial Secretary is empowered to examine the right of a trade union which has complied with Section 7 to represent a group of employees and he *must* exercise these powers if he is requested to do so by the employer or by any five employees. In order to determine (1) whether a majority of the employees in a unit are members in good standing of the union, and (2) whether a majority of them have selected the union as their bargaining agent, the Provincial Secretary may examine records or make other necessary inquiries, including the holding of hearings or the taking of votes, and may prescribe the nature of the evidence to be submitted to him. If he is satisfied that the two conditions have been fulfilled, he may certify the trade union as bargaining agent for the unit of employees.

When the Provincial secretary makes an inquiry into the question of representation, the employer is not bound to recognize or bargain with the union or its members *unless and until* the union has been certified.

The regulations state that a trade union may sue and be sued by the name which it filed with the Provincial Secretary or by the name by which it is commonly known.

Saskatchewan Health Services Act and Hospitalization Act

The Saskatchewan Government has undertaken to provide free hospital services to recipients of old age assistance and their dependants, where the provincial share of the old age assistance pension is paid by Saskatchewan. This provision was approved by O.C. 2671/52 on November 28 and gazetted December 6.

Recipients of old age security (persons over 70 years) or blind persons' allowances whose income is so low that they qualify for a supplementary allowance under the Saskatchewan Social Aid Act were already entitled to receive free health services as well as free hospitalization, in accordance with regulations previously issued under the Health Services Act (L.G., March 1952, p. 316).

Under the new regulations, the Minister of Public Health is responsible for paying the cost of hospital services rendered to a recipient of old age assistance or his dependants if they are services which are given under the Saskatchewan Hospitalization Act. These include public ward accommodation, operating and caseroom facilities, surgical material, X-ray and other diagnostic procedures, physiotherapy, anaesthetic agents, drugs, and certain endocrine and vitamin preparations. To cover the cost of these services, the Minister must pay the hospital tax on behalf of each beneficiary for 1953 and each succeeding year.

The dependants of a recipient of old age assistance, including the spouse and each dependent child or grandchild under 16, may receive free hospital services during the period the pension is being paid and for the remainder of the year during which the recipient dies or is admitted to a mental hospital. A child between the ages of 16 and 21 years who is permanently incapacitated, physically or mentally, and is dependent on the recipient is also eligible to be a beneficiary. No person entitled to receive health services from the Government of Canada may be a beneficiary under these regulations.

The Hospitalization Act requires a person to have resided in Saskatchewan for six months before he may benefit under the Act. The regulations stipulate that this qualification does not apply to old age assistance recipients and their dependants.

(Continued from page 283)

delivery man $30 and $35 respectively in Zone I. New minimum hourly wage rates for some general classifications are now as follows: cashier and telephone operator 45 cents per hour in Zone 1; temporary employees, working a maximum of 30 hours per week—male (senior and skilled) 60 cents in Zone I, 50 cents in Zone II, male (junior) and female 37 cents in Zone I, 30 cents in Zone II. (The rates for temporary workers male (junior) and for temporary workers female are four cents per hour less than those previously in effect.)

Vacation: employees with five years of continuous service, instead of seven as previously, are entitled to an additional vacation of seven non-consecutive days with pay per year.

Wholesale Food Trade, Quebec District

68543—9½

Saskatchewan Equal Pay Act Proclaimed in Force

The Saskatchewan Equal Pay Act, passed at the 1952 session of the Legislature, was proclaimed in force from January 1, 1953. Thus, there are now two Canadian provinces with an equal pay law, Ontario having passed a similar Act in 1951. Alaska and 13 States of the United States have legislation which is similar in principle but which varies widely in coverage and provision for enforcement.

The Saskatchewan Act requires employers to pay women at the same rate as men when they are employed to do *work of comparable character* in the same establishment. The principal difference from the Ontario Act is that the latter requires equal pay for men and women when they do the *same work* in the same establishment.

The Act will be administered by the Minister of Labour and the Director of the Wages and Hours Branch of the Department. Enforcement depends largely on complaints from employees. Investigation of complaints will be carried out by an inspector of the Department and, if his efforts at settlement are unavailing, provision is made for the Minister to appoint a Board to inquire into the matter. After receiving the Board's recommendations, the Minister has power to make an order requiring compliance with the law. Offences under the Act are punishable by fines not exceeding $100.

1952 Edition of *Provincial Labour Standards* Now Available

Changes in the standards set by provincial labour laws are noted in each annual edition of the Department of Labour publication *Provincial Labour Standards*, the 1952 edition of which is now available. A reduction in maximum working hours and an increase in minimum wage rates in Edmonton, Calgary, Lethbridge and Medicine Hat; higher general minimum rates in Manitoba, New Brunswick and Quebec; and an upward revision of benefits under the Workmen's Compensation Acts of seven provinces are recorded in the new edition.

The bulletin sets out, in a form which permits easy comparison, the standards set by provincial law with regard to the school-leaving age, minimum age for employment, annual and public holidays, maximum daily and weekly hours of work, minimum wages for both experienced workers and learners, workmen's compensation benefits payable in case of death or disability, and the provision made for a weekly rest day. Workplaces dealt with in the tables are mines, factories, shops, offices, hotels and restaurants.

Copies of this mimeographed bulletin may be obtained from the Legislation Branch, Department of Labour.

(Continued from page 231)

The *JOC* also inquired into working methods, hours of work, hygiene and safety on the job, the travelling necessary to get to work, and the daily, periodic and annual rest periods enjoyed by young workers in the province of Quebec.

The inquiry showed that 13·7 per cent worked at night and on other shifts; 32 per cent of the latter group, that is five per cent of all the young workers, were under 19 years of age.

The average working week was 49·4 hours, but 10 per cent of all the young workers questioned worked more than 60 hours per week, whereas 34 per cent worked 48 hours or less.

The average wage of young workers with a work week of more than 60 hours was $27.25, while the average earnings of all the young workers amounted to $28.27 a week.

The investigation also established the fact that 72·6 per cent of all the young workers had not had any medical examination before starting to work, while the proportion of those who had not been examined since starting to work in their present employment was 77·7 per cent.

Thirty per cent of the young workers covered by the survey considered their work dangerous from the accident point of view; seven per cent of these were under 18 years of age. Moreover, 15·7 per cent of all the young workers had already been prevented from working because of an industrial accident.

More than 20 per cent of the young workers questioned during the investigation said that they had no annual vacations. Of the 683 young workers questioned with regard to the length of their annual vacations, 488 had one week, 10 had a week and a half, 166 two weeks and 19 three weeks. According to this inquiry, 71 per cent of the young workers enjoying an annual vacation had only one week.

Decisions of the Umpire under the Unemployment Insurance Act

Digests of two selected decisions rendered by the Umpire

Decision CU-B 868, November 4, 1952

Held: *That a claimant who was temporarily laid off a few days before a stoppage of work due to a labour dispute at the plant at which he was employed for reasons independent of the said dispute, was not subject to disqualification under Section 39 (1) of the Act, as the employer could not give any precise details or an approximate date as to the claimant's return to work had the stoppage of work not occurred.*

Material Facts of Case.—The claimant had been employed as a weaver by a textile company from 1934 to March 27, 1952, when he was laid off because of lack of work. On March 28, 1952, he filed a renewal claim, which was allowed, and he received benefit up until April 2, 1952, when a stoppage of work due to a labour dispute occurred at the plant.

According to the submissions, a few months before the said stoppage, the interested union had been negotiating with the company for better conditions of work and the renewal of the collective agreement which covered all employees of the company except the administrative and office staffs. On April 2, 1952, the negotiations came to a deadlock and 2,700 of the 3,000 persons employed by the company walked out.

The insurance officer disqualified the claimant from the receipt of benefit under Section 39 (1) of the Act for the duration of the stoppage of work.

The claimant appealed to a court of referees, which, after having heard the claimant and representatives of the union and the company, by a majority decision, disallowed the appeal.

The claimant appealed to the Umpire.

Conclusions.—In cases like the present one, where a claimant has been laid off temporarily before the beginning of a stoppage of work due to a labour dispute and for reasons independent thereof, the insurance officer, before imposing a disqualification under Section 39 (1) of the Act, must satisfy himself that the claimant would have been recalled to work at the premises where he was employed, had there not been a stoppage of work. In other words, he must satisfy himself that the stoppage of work has delayed the claimant's return to work.

If the layoff is for a definite period there is no difficulty and the claimant is subject to disqualification from the receipt of benefit under Section 39 (1) of the Act from the date he was normally due to return to work; if the layoff is for an indefinite period the question is not as easy to determine, especially when the employer, as in this case, intentionally or otherwise, does not clarify the matter.

In a recent case (CU-B 863), dealing with a sewing machine operator who with other employees had been engaged in the making of military pants and who had been temporarily laid off due to lack of cloth two days before the commencement of a strike, I decided that Section 39 (1) of the Act had to be applied from the beginning of the stoppage of work as there was satisfactory proof on file that the employer was expecting to receive in two or three days' time the necessary cloth from the federal Government.

In the present case the company's representative has stated before the court of referees that he could not give any precise details, not even the approximate date of the claimant's return to work. Moreover, except for a doubt that may be created by the duration of the stoppage of work (from April 2 to July 8), the benefit of which must be given to the claimant, there is nothing in the evidence which would allow me to conclude that the claimant would have returned to work some time during the period of the strike, had it not occurred.

For those reasons, I do not consider that Section 39 (1) of the Act applies in this case.

I wish to add that this decision is in accordance with the principles laid down in decision CU-B 716, which relates to the

case of a claimant who had been laid off due to lack of work shortly before the commencement of a strike in the shipyard where he was working.

The appeal is allowed.

Decision CU-B 875 (& CU-C 29), Nov. 4, 1952

Held: *That the claimant's service on the picket line was not a form of employment within the meaning of the Act and as no employment was involved there was no ground for an extension of the two-year period under Section 28 (3) of the Act.*

Material Facts of Case.—The claimant was employed as a sheet metal worker by a manufacturer of electrical equipment from 1937 to May 10, 1950.

On May 11, 1950, a stoppage of work due to a labour dispute began at the premises of the company which did not terminate until May 16, 1951. The claimant for nearly the whole of that period performed picket duty and received moneys from his union. On the morning of May 17, 1951, a general resumption of work took place and the claimant returned to his employment, in which he continued until June 15, 1951, when he was laid off because of a shortage of work.

On June 16, 1951, he filed an initial application for benefit which was disallowed by the insurance officer because he lacked sufficient contributions to meet the requirements of Sections 28 (1) of the Act.

The claimant appealed to a court of referees. The court sat on July 24, 1951, and the claimant and two representatives of his union were present. The court refrained from rendering a decision on the case and referred it back to the Commission because in the opinion of the court the matter to be decided was one which came under the jurisdiction of the Commission, *viz,* whether the claimant was under a contract of service during the period he performed picket duty and received moneys from his union.

The case was reviewed by the Chief Coverage Officer who, on January 16, 1952, expressed the opinion that there was no reason for the Commission to take jurisdiction of the case inasmuch as the question remained one of qualification under Section 28 (1) of the Act and was for the court of referees to decide. As a consequence, the case was again placed before a court of referees which on January 30, 1952, after hearing a representative of the claimant's union, unanimously allowed the appeal because in its opinion the claimant was under a contract of service during the period he had performed picket duty and therefore, as from June 16, 1951, he was entitled to have his exempted employment taken into account.

The insurance officer appealed to the Umpire on the ground that the court exceeded its jurisdiction by acting on a question which by Section 45 of the Act is specifically reserved in the first instance to the Commission. The Chief Coverage Officer also applied for a decision of the Commission under Section 45 of the Act and the latter, pursuant to Section 48 of the Act, referred the following question to the Umpire for decision:—

> (a) whether or not a person who is in receipt of moneys from a union for picket duty is an insured person, and
>
> (b) whether or not that person while in receipt of moneys from a union for picket duty comes within the provisions of paragraphs (b), (c), (d), (e) or (f) of subsection (3) of Section 28 of the Act for the purpose of an extension of the two-year period.

A notice of reference was sent by the Commission to the interested parties as well as to the larger labour organizations so as to afford them the opportunity of making the observations and representations which they desired the Umpire to consider in deciding the questions referred to him.

The Canadian Congress of Labour submitted a brief to the Umpire and requested an oral hearing, which was held before him on October 1, 1952, and attended by a representative of the said Congress and representatives of the Commission.

Conclusions.—It was suggested by the Legal Adviser (of the Unemployment Insurance Commission) that the terms of the reference made under Section 48 of the Act be narrowed down to fit the particular facts of the present case. With this I agree.

The questions therefore to decide are whether or not, while performing picket duty, the claimant was under a contract of service and whether or not he came within the provisions of paragraphs (b), (c), (d), (e) or (f) of subsection (3) of Section 28 of the Act, which are as follows:

> 28 (3) If an insured person proves in the prescribed manner that he was, during any period falling within the two years specified in subsection one of this section,
>
> (a) ..... or
>
> (b) employed in excepted employment; or
>
> (c) engaged in business on his own account; or
>
> (d) employed in insurable employment in respect of which contributions were not payable; or

(e) employed outside of Canada or partly outside of Canada, in an employment in respect of which contributions were not payable; or

(f) employed in an employment not described by Part I of the First Schedule to this Act,

then subsection one of this section and section thirty-one of this Act shall have effect as if, for each period therein referred to, there were substituted that period increased by the aggregate of the periods of such incapacity or of such employment or business engagement, but the increase so made in any period shall not in any case exceed two years.

Mr. ....., the representative of the Canadian Congress of Labour, which organization "is an interested party in this reference inasmuch as important principles are at stake," stated at the hearing that the claimant's union does not pay fixed salaries for picketing but merely provides moneys to their striking members according to their needs. In support of this, he submitted the following memorandum which is signed by (the) National Director of the United Steelworkers of America:—

1. Welfare funds are established by voluntary contributions from local unions and the International union.
2. Strikers are eligible for welfare payments on an individual basis, with their family needs the governing factor as to the amount to be paid.
3. A register of strikers is kept, and persons receiving strike welfare are expected to perform the various duties necessary for an effective strike.
4. There is no constitutional provision or union practice for the payment of pickets on a regular wage basis.

It would therefore appear that the court of referees, which, as pointed out by the insurance officer, exceeded its jurisdiction in dealing with the question of whether or not the claimant was employed under a contract of service, was misinformed as to the facts of the case and that the moneys given to the claimant by the union were not conditional on his performing picket duty.

In any event, even if picketing was a condition *sine qua non* for his receiving moneys during the strike, I am of the opinion that there was no contract of service involved. As the Congress well puts it in its brief: ". . . strike benefit is not a form of remuneration in return for a member having picketed. It is merely assistance to relieve hardship and very frequently is based on need. Picketing is not a form of employment and is therefore not done under the terms of a contract of service. It is a condition of membership in the broad sense that a union member on strike has a moral obligation, not to say a direct interest, to engage in an activity which may all the sooner terminate the stoppage in his favour."

For those reasons, I do not consider that the claimant's service on the picket line was a form of employment within the meaning of the Act. It follows that, if no employment was involved, there is no ground for an extension of the two-year period under Section 28 (3) of the Act.

It was argued, however, by Mr. ..... that, in cases like the present one, an anomaly is created by the co-existence of Section 28 (1) (b) and Section 39 (1) of the Act. By virtue of Section 39 (1) (loss of employment by reason of a stoppage of work due to a labour dispute), the claimant was disqualified from the receipt of benefit. By virtue of Section 28 (1) (b), he was again disqualified from the receipt of benefit, because he could not show the necessary number of contributions, and this, notwithstanding the fact that he was in the labour market throughout the period of his participation in the stoppage, being "engaged in a collective effort to improve the conditions of his contract of service". In the opinion of the representative of the Canadian Congress of Labour "it may well be that such a situation was not envisaged by Parliament when it amended the Act in 1950".

Mr. ..... therefore stated, on behalf of his organization, that it was their belief that an amendment to the Act would be in order by adding a new paragraph (g) to Section 28 (3), along the following lines:—

> Participating in a stoppage of work due to a labour dispute at the factory, workshop, or other premises at which he was employed.

This is a very interesting suggestion indeed and I have no hesitation in recommending to the Commission that it be given careful study with a view to ascertaining whether such enactment would meet with the true intent and purpose of the Act.

The insurance officer in his lengthy appeal hereinbefore referred to made the following remarks:—

> The penultimate paragraph of the court's decision of January 30, 1952, indicates the belief that the law which governs the decisions of insurance officers and that governing courts of referees is not identical and I suggest that an expression of opinion by the Umpire covering this point would be of value in the guidance of courts sitting in the future.

It goes without saying that all the adjudicating authorities, be they insurance officers, courts of referees or the Umpire, are bound by the provisions of the Act and must give to it one and the same application. However, I doubt very much that the court of referees intended to mean otherwise and I would point out that, in the first instance (see its comments of July 24, 1951), it rightly felt that this case was one which came under the Commission's jurisdiction.

My decision therefore is that the claimant who lacked sufficient contributions to meet the requirements of subsection (1) of Section 28, has not established his right to an extension of the two-year period, pursuant to subsection (3) of the said section.

Monthly Report on Operation of the Unemployment Insurance Act

November, 1952, statistics* show number of claims for unemployment insurance benefit increased by 35,461 over previous month's 87,957

Claims for unemployment insurance benefit were higher in the month of November by 35,461. The report on the operation of the Unemployment Insurance Act issued by the Dominion Bureau of Statistics shows that during the month a total of 123,418 initial and renewal claims was filed in local offices across Canada, compared with 87,957 in October and 122,603 during November 1951.

Active claimants on the live unemployment insurance register on November 29 numbered 181,554 (140,297 males and 41,257 females), of whom 161,912 were ordinary, 12,077 short-time and 7,565 on temporary mass lay off. Ordinary claimants on October 31 totalled 111,539, while on November 30, 1951, they numbered 153,651.

A total of 107,882 initial and renewal claims were disposed of during the month, 85,910 being entitled to benefit. Claims disallowed numbered 11,272, while disqualifications were imposed in 14,580 cases (including 3,880 on revised claims). Chief reasons for disqualification were: "voluntarily left employment without just cause" 5,483 cases; "not unemployed" 3,473 cases (for 1,772 of the disqualifications categorized "not unemployed" the period of disqualification was six days or less); "not capable of and not available for work" 1,445 cases.

New beneficiaries during the month totalled 68,034, compared with 50,848 in October and 67,861 in November, 1951.

Benefit payments amounted to $6,435,444 for 2,158,920 unemployed days during November, compared with $5,710,740 for 1,932,994 days during October and $5,107,466 and 2,033,423 days during November, 1951. The larger proportionate increase in the amount of benefit paid in relation to days compensated this month compared with November 1951, was largely due to the increase in benefit rates effective July 14, 1952. An additional factor was an increase in the proportion of male claimants who draw benefit at higher rates either on account of dependents or because they are in the higher contributory groups.

Comparison of current employment statistics with those for a previous period serves no useful purpose if made on the basis of numbers alone. Consideration must be given to other relevant factors, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

During the week November 29-December 5, 1952, a total of $1,883,934 was paid to 112,319 beneficiaries in respect of 626,554 compensated days, in comparison with $1,295,050 paid to 79,406 beneficiaries for 438,084 days of unemployment for the week October 25-31. During the week November 24-30, 1951, a total of 97,511 beneficiaries received $1,327,648 in compensation for 523,648 unemployed days.

The average daily rate of benefit was $3.01 for the week November 29-December 5, $2.96 for the week October 25-31, and $2.54 for the week November 24-30, 1951.

*See Tables E-1—E-6 at end of book.

Labour Conditions in Federal Government Contracts

Wage Schedules Prepared and Contracts Awarded during December

Works of Construction, Remodelling, Repair or Demolition

During December the Department of Labour prepared 93 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition.

In the same period, a total of 145 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:—

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded under this heading for the month of December are set out below:—

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	1	$ 73,289.00
Defence Production (November Report).....	194	2,786,522.00
Post Office	8	113,096.09

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:—

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and, if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district or, if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no employee shall be discriminated against because of race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour, showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work. These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is, however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

Wage Claims Received and Payments Made during December

During December arrears of wages were obtained from one contracting department and $260.95 was distributed to two employees who had been paid less than the required rate of wages on one government contract.

Contracts Containing Fair Wages Schedules Awarded--December

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Penticton B C: R E Postill & Sons Ltd, construction of pumphouse & installation of distribution system.

Central Mortgage and Housing Corporation

Halifax N S: J Phillip Dumeresq & Assoc,* services for design & supervision of construction. *Chatham N B:* William Kerr Jr,* supply & placing of wood walks. *Saint John N B:* Community Enterprises Ltd, construction of houses; Eastern Landscape Company,* installation of playground areas, rifle range. *Montreal P Q:* D'Errico Bros Construction Co Reg'd,* grading & paving, Benny Farm Gardens; D'Errico Bros Construction Co Reg'd,* building of retaining wall & driveway, 4938 Connaught Ave. *Quebec P Q:* Town of Ste Foy, installation of water & sewer services. *St. Hubert P Q:* Louis B Magil, construction of school. *St Therese P Q:* Vezina Construction Co, installation of water & sewer services. *Ajax Ont:* Warren Bituminous Paving Co Ltd, construction of curbs & gutter; W B Bennett Paving Ltd,* construction of finished road subgrade. *Aylmer Ont:* Elgin Construction Co Ltd, construction of roads, driveways, parking areas, ditches & storm sewers. *Barriefield Ont:* McGinnis & O'Connor Ltd, repairing drainage to Riverside Drive. *Downsview Ont:* Hydro Electric Power Commission,* installation of electrical power distribution system; Dumfries Construction Co Ltd, installation of storm sewers. *North Bay Ont:* Hydro Electric Power Commission,* installation of electrical power distribution system. *Oakville Ont:* Hydro Electric Power Commission,* supply & erection of overhead poles. *Petawawa Ont:* Storms Contracting Co Ltd, installation of storm, sanitary sewers & watermains. *Stamford Ont:* Zellers Contracting Co Ltd, construction of houses. *Uplands Ont:* James F McLaren & Assoc,* services *re* design of drainage system. *Portage la Prairie Man:* Nelson River Construction Ltd, construction of sewer & water services. *Winnipeg Man:* The Suburban Rapid Transit Co,* installation of street lamps. *Cold Lake Alta:* Nix Brothers Construction Co,* clearing & brushing. *Penhold Alta:* North West Electric Co Ltd, construction of electrical power distribution system.

Defence Construction (1951) Limited

Greenwood N S: M F Schurman Co Ltd, construction of chapels. *Halifax N S:* Bryant Electric Co Ltd, installation of electrical systems on wharves; J A Moulton & Sons, installation of low pressure heating system. *Chatham N B:* M F Schurman Co Ltd, construction of chapels; Modern Construction Ltd, construction of standard drill & recreation hall; Modern Construction Ltd, construction of standard synthetic training bldg. *Bagotville P Q:* R E Stewart Construction Corporation, construction of standard synthetic training bldg. *Farnham P Q:* Dussault Construction Ltd, erection of farm fence. *Montreal P Q:* National Welding Co, installation of steam distribution system. *Quebec P Q:* Bergerville Estates Ltd, construction of inspection services, gauge inspection laboratory; Le Service Paysagiste Engineering,* landscaping. *Camp Borden Ont:* W H Yates Construction Co Ltd, construction of gun testing stop butt; Emery Engineering & Construction Co Ltd, construction of supply section extension bldg; Emery Engineering & Construction Co Ltd, construction of standard guard house. *Centralia Ont:* Elgin Construction Co Ltd, construction of chapel. *Clinton Ont:* R Timms Construction & Engineering Ltd, construction of chapel. *Cobourg Ont:* Arcade Electric Co Ltd, installation of pneumatic tube conveyor, fire alarm, watchman & telephone raceway systems. *Gloucester Ont:* G A Crain & Sons Ltd, construction of operations, administration and galley bldgs. *Hamilton (Mount Hope) Ont:* James Kemp

Construction Co, installation of bulk petroleum storage. *North Bay Ont:* M Sullivan & Sons Ltd, construction of standard drill & recreation hall. *Oakville Ont:* James Kemp Construction Co Ltd, addition to headquarters bldg. *Uplands Ont:* Provincial Engineering Ltd, installation of electrical distribution system. *Gimli Man:* Fraser Construction Co Ltd, construction of standard officers' quarters. *Rivers Man:* John Plaxton Co Ltd, installation of underground steam distribution system. *Clareholm Alta:* Burns & Dutton Concrete & Construction Ltd, construction of standard officers' quarters. *Cold Lake Alta:* Poole Construction Co Ltd, construction of standard synthetic training & unit receiver bldgs; Bird Construction Co Ltd, installation of underground steam distribution system; Burns & Dutton Concrete & Construction Ltd, construction of standard drill & recreation hall. *Namao Alta:* W C Wells Construction Co Ltd, construction of explosive storage bldgs, non-explosive bldgs & access road; Alberta Quonset Sales Ltd, erection of standard explosive storage bldgs. *Comox B C:* J. H. McRae Co Ltd, installation of electrical distribution system & transformer substation; Barr & Anderson Ltd, installation of underground steam distribution system; Dawson Wade & Co Ltd, installation of remaining component parts of bulk storage tanks.

Building and Maintenance

Montreal P Q: Walter G Hunt Co Ltd, replacing of defective wooden piles with pre-cast concrete piles & replacing damaged brickwork, 772 Sherbrooke Street. *St Johns P Q:* A N Bail Co Ltd, permanent subfloor replacement in bldgs. *Valcartier P Q:* Timber Structures of Canada Ltd, supply & erection of 2 complete structural timber frames for bldgs. *Centralia Ont:* Ellis-Don Ltd, permanent subfloor replacement in bldgs. *Toronto Ont:* Design-Craft Ltd, new construction, refurbishing and dismantling of booths—Canadian International Trade Fair (1953). *Trenton Ont:* Jas Kemp Construction, cubicling of barrack blocks, No. 6 Repair Depot. *Winnipeg Man:* Commonwealth Construction Co Ltd, paving of triangle between hangars, RCAF Station. *Calgary Alta:* Hornstrom Brothers, cubicling of bldgs, No. 25 Air Materiel Base.

National Harbours Board

Halifax Harbour N S: Standard Paving Maritime Ltd, installation of cast iron water supply system for fire protection at grain elevator. *Montreal Harbour P Q:* Charles Duranceau Ltd, resurfacing Jacques Cartier bridge roadway at pavilion. *Port Colborne Ont:* Ace Roofing Co, reroofing north half of grain elevator.

Department of Public Works

Bonavista Nfld: North Shore Construction Co Ltd, installation of new sewer, public bldg. *Arichat N S:* H E McDonald, improvements to public bldg. *Dennis Point N S:* The Atlantic Bridge Co Ltd, harbour improvements. *Halifax N S:* R J Frosst & Co, alterations to Administration Bldg, Camp Hill Hospital. *Trout Cove N S:* Atlantic Bridge Co Ltd, breakwater repairs. *West Baccaro N S:* Mosher & Rawding Ltd, breakwater repairs. *Windsor N S:* M V Sawler, repairs to public bldg. *Curry's Cove N B:* Diamond Construction Co Ltd, construction of breakwater-wharf. *Fredericton N B:* Maritime Waterproofing & Contracting Co Ltd, alterations to headquarters bldg, "J" Division, RCMP. *Petit Rocher N B:* Diamond Construction Co Ltd, breakwater repairs. *Forestville P Q:* McNamara Construction Co Ltd, wharf extension. *Hull P Q:* Concrete Construction Ltd, completion of National Printing Bureau. *Ville de Lery (Lake St Louis) P Q:* Theode Robidoux,* dredging. *Lauzon P Q:* Geo T Davie & Sons Ltd,* construction of drill boat; Davie Shipbuilding & Repairing Co Ltd,* repairs to dredge. *Quebec P Q:* Abel Ratte, repairs to brick walls, Immigration Bldg, Savard Park. *Ste Felicite P Q:* Gulf Maritime Construction Co Ltd, wharf repairs. *Barrie Ont:* The Sargeant Co Ltd, roofing repairs, public bldg. *Burlington Channel Ont:* Kamlee Construction Ltd, repairs to piers. *Cobourg Ont:* Ontario Construction Co Ltd, pier reconstruction. *Hamilton Ont:* McNamara Construction Co Ltd,* dredging; James Kemp Construction, alterations and additions, Cornell Bldg. *Montreal River Ont:* L R Brown & Co Ltd, construction of wharf. *Moosonee Ont:* McNamara Construction Co Ltd,* dredging. *Oshawa Ont:* Fried Construction Co Ltd, erection of federal public bldg. *Ottawa Ont:* Doran Construction Co Ltd construction of virus laboratory; R F Walsh Co Ltd, repairs and repainting of stonework, Centre Block, Parliament Bldgs; R F Walsh Co Ltd, repairs and repainting of stonework, Connaught Bldg; Thomas Fuller Construction Co Ltd, partitioning, etc, Metcalfe Bldg. Geo C Graves Con-

struction Co Ltd, alterations to "G" Wing No. 6 Temporary Bldg. *Port Bruce Ont:* Dean Construction Co Ltd, harbour improvements (pier repairs). *Port Hope Ont:* Ontario Construction Co Ltd, extension to Queen's wharf. *Sudbury Ont:* Grant Plumbing & Heating, installation of new heating plant, public bldg. *Toronto Ont:* Richard & B A Ryan Ltd, alterations to fourth floor, 66 Temperance Street; Richard and B A Ryan Ltd, alterations to third floor, Customs Bldg. *Selkirk Man:* J S Quinn Construction Co, construction of wharf. *Souris Man:* West End Contractors & Cabinet Makers Ltd, alterations, painting, new post office screen, etc, public bldg. *Fort Qu'Appelle Sask:* Douglas Construction Co Ltd, completion of construction, public bldg; Douglas Construction Co Ltd, additions & alterations for completion of construction of Indian Hospital. *Humboldt Sask:* Shoquist Construction Ltd, addition & alterations to public bldg. *Saltcoats Sask:* Logan & Black Ltd, alterations & improvements, public bldg. *Blubber Bay B C:* Harbour Pile Driving Co, wharf repairs & improvements. *False Bay B C:* Victoria Pile Driving Co Ltd, wharf repairs & improvements. *Heriot Bay B C:* Pacific Pile Driving Co Ltd, replacement of float approach. *Lund B C:* Pacific Pile Driving Co Ltd, repairs to wharf & floats. *Lyall Harbour B C:* Pacific Pile Driving Co Ltd, wharf repairs & improvements. *McMillan Island B C:* Fraser River Pile Driving Co Ltd, wharf reconstruction. *Needles B C:* Interior Contracting Co Ltd, wharf repairs & extension. *Prince Rupert B C:* Northwest Construction Ltd, extending ring wall, etc, for basement offices, Miller Bay Indian Hospital. *Sardis B C:* Christian & Allen Ltd, installation of water & sewage disposal systems, Coqueleetza Indian Hospital. *Vancouver B C:* Jarvis Electric Co, improved lighting, third floor, Federal Bldg. *Victoria B C:* Canada Paint & Contracting Co, alterations to 8th floor, Belmont Bldg; O Pedersen, alterations to 1st, 2nd, 3rd & 5th floors, Belmont Bldg. *Williams Lake B C:* C J Oliver Ltd, erection of federal public bldg. *Fort Simpson N W T:* H Kelly & Co Ltd, plumbing & heating at RCMP Quarters & plumbing at Department of Transport Residence.

Department of Resources and Development

Emerson Man: Macaw & Macdonald, construction of recorder well & shelter. *Headingley Man:* Shum Construction Co, construction of recorder well & shelter. *Prince Albert National Park Sask:* W C Wells Construction Co Ltd, installation only of extension to water supply system, Waskesiu Townsite. *Banff National Park Alta:* Williams & Carrothers Ltd, construction of section of Trans-Canada Highway & improvements at east gate entrance; Williams & Carrothers Ltd, construction of 3 reinforced concrete box culverts, Trans-Canada Highway; Remington Construction Co Ltd, construction of Bow River bridge & connecting highway, Trans-Canada Highway; Nodwell Bros Ltd, replacement of Spray River bridge. *Jasper National Park Alta:* Waterman-Waterbury Co Ltd, construction of water heating plant for water supply system; Western Construction & Lumber Co Ltd, improvements to 17 miles of the Yellowhead road. *Newbrook Alta:* August Buerger, construction of observer's residence with attached 2 car garage. *Waterton Lakes National Park Alta:* Wilson & Wilson Ltd, installation of water & sewer systems. *Revelstoke B C:* Western Water Wells, drilling work on Columbia River between Revelstoke & Boat Encampment. *Yoho National Park B C:* Pierre Asselin, construction of subgrade & gravel surfacing of Yoho Valley road. *Whitehorse Y T:* Campbell's Ltd, interior decorating of 3 houses & placing of foundations under two houses. *Aklavik Fort Simpson & Hay River N W T:* The Tower Co Ltd, construction of 3 insulated one storey bldgs.

Department of Transport

Sydney N S: R G McDougall, construction of power house. *Lac des Loups P Q:* Veillet & Gosselin Ltd, installation of field lighting. *L'Annonciation P Q:* Dubuc Construction & Paving Ltd, installation of field lighting. *La Tuque P Q:* M Electrique Ltd, installation of field lighting. *Patricia Bay B C:* J A Pollard Construction, construction of ILS facilities. *Vancouver B C:* Campbell-Bennett Ltd, construction of access road to middle marker.

Food and beverage industries include 23·4 per cent of all industrial establishments in Canada, employ 14·2 per cent of the country's industrial employees and are responsible for 21·8 per cent of the total gross value of products manufactured in Canada.

Prices and the Cost of Living*

Consumer Price Index, January 2, 1953

The Dominion Bureau of Statistics consumer price index remained practically unchanged at 115·7 for January 2, 1953. At December 1 it was 115·8 and at the beginning of January a year ago, 118·2.

The food index registered the largest group change—and it was less than one-half of one per cent—as price movements were confined within narrow limits between December 1 and January 2. The food index declined from 114·1 to 113·5 as lower prices for eggs and oranges combined with numerous slight decreases in other items to overweigh increases concentrated in fresh vegetables and beef.

Clothing remained unchanged at an index level of 109·7.

In the household operations series, advances for coal, electricity and telephone rates in some centres, as well as higher quotations for a few items of home furnishings, moved the index from 116·1 to 116·5.

The index of other commodities and services advanced from 116·6 to 116·7, mainly because of an increase in the index of recreation.

The shelter index moved from 122·2 to 122·3 following the inclusion of results of a December rent survey.

The consumer price index one year ago (January 2, 1952) was 118·2. The group indexes at that date were: food, 122·4; shelter, 118·3; clothing, 114·9; household operation, 116·4; and other commodities and services, 115·5.

Cost-of-Living Index, January 2, 1953

The cost-of-living index advanced 0·2 points between December 1 and January 2, rising from 184·2 to 184·4. At January 2, 1952, it stood at 191·5.

The food index rose slightly from 226·1 at December 1 to 226·2 at January 2; one year ago it was 250·0. The rent index also advanced, from 149·9 to 150·2; at January 2 last year it was 144·8. The fuel and light index increased from 152·7 to 153·9; 12 months earlier it was 151·2. The clothing index dropped slightly from 205·4 to 205·3, considerably below last year's January 2 level of 215·3. The home furnishings and services index advanced from 195·3 to 196·0 but was still lower than last January's figure of 201·1. The miscellaneous index rose 0·1 point, from 148·8 to 148·9, a figure 3·2 points above last year's 145·7.

*See Tables F-1 to F-6 at end of book.

City Cost-of-Living Indexes, December 1, 1952

Cost-of-living indexes for eight of the nine regional cities moved down between November 1 and December 1 while one advanced, the Dominion Bureau of Statistics has reported. Substantial seasonal decreases in the price of eggs were mainly responsible for the lower indexes.

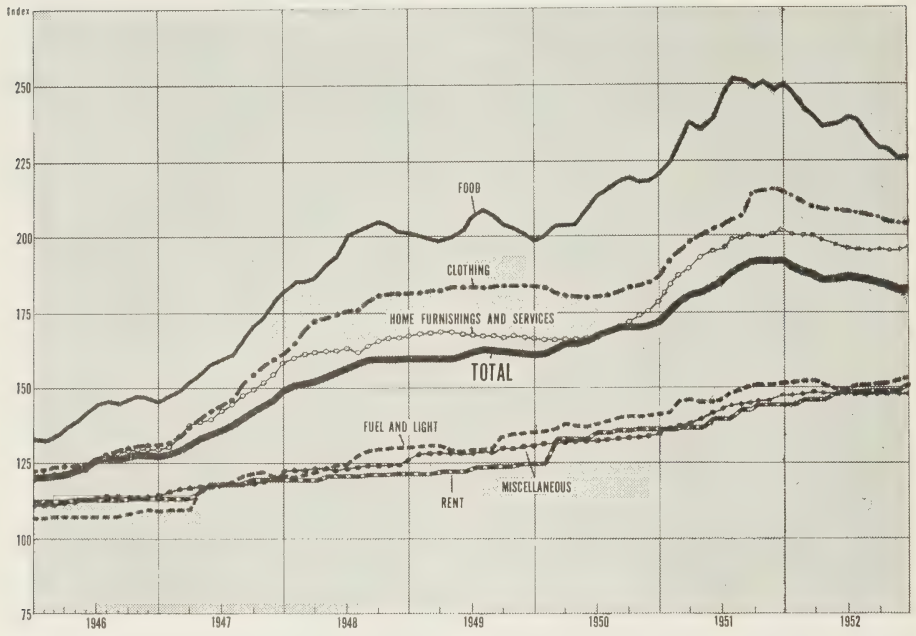
Egg prices were firm in Vancouver and, as a result, both the food index and the total index moved up.

Butter and lard prices were higher in most centres. Lower prices were quoted for potatoes in the eastern cities, higher prices in the West. Changes in the clothing and the home furnishings and services groups were small and scattered, the movement being mainly downward.

Fuel and light indexes were unchanged in all cities except Montreal, where increases in coal and coke were reported. A decrease in gasoline prices in Winnipeg lowered the miscellaneous items index for that city while for other cities the indexes were unchanged.

Higher rent indexes were recorded for seven cities; indexes for St. John's and Halifax showed no change.

Composite city cost-of-living index point changes between November 1 and December 1 were as follows: Vancouver, +0·5 to 188·1; Halifax, —1·2 to 173·5; Saskatoon, —1·2 to 180·9; Saint John, —1·0 to 180·4; Winnipeg, —0·9 to 176·3; Montreal, —0·8 to 188·8; Toronto, —0·6 to 180·8; Edmonton, —0·5 to 176·2; St. John's, —0·2 to 102·3.



Wholesale Prices, December 1952

The almost steady decline in wholesale prices over the past year and a half continued in December, when the composite index stood at 221·2 compared with the 1952 low of 221·0, registered in October, and the 1951 low of 237·7, marked in December. In November 1952, the index was 221·9.

Four of the eight major component groups contributed to the decline between November and December while four moved up. As in previous months, commodity losses continued to be concentrated in basic raw and semi-manufactured items.

Fibres, textiles and textile products registered the greatest decline, the index changing from 244·8 to 241·4 as a result of lower prices for binder twine, raw cotton and cotton yarns.

COST OF LIVING IN CANADA FROM JANUARY 1946

In vegetable products, an index reduction from 204·6 to 202·7 reflected commodity price weakness for potatoes, certain grains, automobile tires and tubes, and oranges.

Slightly lower quotations for newsprint, wood pulp and cedar lumber (shingles) were reflected in a drop in the index for wood, wood products and paper from 293·4 to 291.2.

Chemicals and allied products moved down from 176·4 to 176·1 as a result of lower quotations for paint materials and drugs and pharmaceuticals.

Among groups registering increases were animal products, which advanced from 235·4 to 237·4, reflecting advances in livestock, except hogs, in meat and in fish. These outweighed a sharp drop in eggs.

Higher prices for imported coal, both anthracite and bituminous, window glass and sand and gravel overbalanced a small decrease in sulphur to move the non-metallic minerals index from 173·5 to 174·9.

Iron and its products changed from 221·2 to 221.4 because of small advances in certain specifications of iron and steel pipe and tubing and hardware. Firmness for lead and solder which outweighed small declines in gold, silver and tin moved the non-ferrous metals index up 0·1 points to 167·7.

Canadian farm product prices at terminal markets moved down from 222·9 to 222·3 between November and December as a result of further weakness in field products. The index for this series dropped from 179·2 to 176·4, reflecting losses in grains—notably flax and rye—potatoes and raw leaf tobacco. Animal products increased from 266·5 to 268·3 because of increases in livestock and eastern butterfat prices, which outweighed sharply lower quotations for eggs.

The index for residential building material prices changed from 283·9 to 283·8 between November and December. Group changes were small with two exceptions: roofing materials dropped from 220·0 to 217·0 because of lower quotations for western cedar shingles and the paint and glass series moved up from 190·2 to 195·0 as a result of higher prices for window glass, which overbalanced a decline in shellac.

The United States cost-of-living index, abandoned last month when publication of the revised consumer price index began, has been revived until June 30 "solely for the purpose of meeting the needs of certain labour unions and business concerns which have contracts based on it".

Strikes and Lockouts

Canada, December, 1952*

Industrial disputes which resulted in work stoppages declined during the year from 259 in 1951 to 213 in 1952.† The number of workers involved increased from 102,870 in 1951 to 118,463 in 1952. Strike idleness increased sharply from a loss of 901,739 days in 1951 to 2,869,587 days in 1952, the third greatest loss in the records of the Department. In 1946, time lost was 4,500,000 days and in 1919, 3,400,000 days.

Wages and related benefits were the central issues in 132 of the 213 stoppages in 1952, causing 94 per cent of the total idleness. Of the other disputes, 33 arose over causes affecting working conditions; 20 over suspensions and dismissals; 16 over union questions; six over alleged discrimination; four were inter-union disputes; one arose over reduced hours; and one was a sympathy stoppage.

In 1952, six stoppages, with a time loss of more than 100,000 days in each case, caused 65 per cent of the total idleness. These were: loggers, lumber and wood products factory workers in British Columbia coastal regions; cotton factory workers at Montreal and Valleyfield, Que.; carpenters, painters and decorators, labourers, in British Columbia coastal regions; building trades workers at Halifax, N.S.; rayon factory workers at Louiseville, Que.; and rubber factory workers at Hamilton, Ont.

In December, 1952, the time loss was slightly higher than in the previous month. Preliminary figures show 18 strikes and lockouts, involving 3,646 workers, with a time loss of 47,279 days, compared with 22 strikes and lockouts in November 1952, with 5,084 workers involved and a loss of 44,176 days. In December 1951, there were 21 strikes and lockouts, involving 12,497 workers, and a loss of 115,835 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in December 1952, was 0·05 per cent of the estimated working time, the same as in November 1952; 0·12 per cent in December 1951; 0·26 per cent for 1952; and 0·08 per cent for 1951.

Of the 18 strikes and lockouts in existence in December 1952, two were settled in favour of the workers, four in favour of the employers, and five were compromise settlements. At the end of the year seven stoppages were recorded as unterminated. These were: copper refiners at Montreal, Que.; rayon factory workers at Louiseville, Que.; clothing and hosiery factory workers at Montreal, Que.; jewellery factory workers at Vancouver, B.C.; sheet metal workers at Fort William and Port Arthur, Ont.; carpenters at Fort William, Ont.; and furniture factory workers at Durham, Ont.

(The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes and lockouts of this nature still in progress are: compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and waitresses at Timmins, Ont., on May 23, 1952. The following disputes are considered to be no longer in existence or to have lapsed: jewellery factory workers at Toronto, Ont., December 3, 1951; handbag factory workers at Montreal, Que., August 31, 1951; truck drivers and warehousemen at Ottawa, Ont., January 21, 1952; and stamp and stencil factory workers at Hamilton, Ont., on May 20, 1952.)

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE and in this article are taken, as far as possible, from the government publications of the countries concerned or from the International Labour Office *Year Book of Labour Statistics*.

*See Tables G-1 and G-2 at end of book.
†All figures for 1952 are preliminary.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in October 1952, was 146 and 17 were still in progress from the previous month, making a total of 163 during the month.

In all stoppages of work in progress, 25,000 workers were involved and a time loss of 91,000 working days caused.

Of the 146 disputes leading to stoppages of work which began in October, 13, directly involving 5,800 workers, arose over demands for advances in wages, and 57, directly involving 3,800 workers, over other wage questions; three, directly involving 300 workers, over questions as to working hours; 22, directly involving 1,800 workers, over questions respecting the employment of particular classes or persons; 50, directly involving 4,800 workers, over other questions respecting working arrangements; and one, directly involving 100 workers, over questions of trade union principle.

Australia

During the second quarter of 1952, there were 376 industrial disputes resulting in work stoppages directly involving 137,727 workers. The time loss was 390,626 man-working days for all workers directly and indirectly involved.

Selected Publications Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, on Inter-library loan, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

List No. 55.

Accident Prevention

1. **U.S. Congress. House. Committee on Education and Labor.** *Prevention of Major Disasters in Coal Mines.* Report of the Committee on Education and Labor to the House of Representatives, Eighty-second Congress, Second Session on H.R. 7408, a Bill to amend Public Law 49, Seventy-seventh Congress, so as to provide for the Prevention of Major Disasters in Coal Mines. Washington, G.P.O., 1952. Pp. 46.

Chemical Unions Form New CCCL Federation

Nearly 4,000 workers belonging to six chemical products unions in the province of Quebec have set up a new labour federation affiliated with the Canadian and Catholic Confederation of Labour. This is the CCCL's 17th professional federation.

The federation, founded at Shawinigan Falls early in January, will be known as the National Federation of Chemical Industry Workers. Its headquarters will be at Shawinigan.

The new federation has set as an objective for its first year the launching of an extensive organizational campaign among all chemical products workers in the province. It is expected that it will soon have 10,000 members.

J. Emile Hebert, President of the Chemical Products Workers' Syndicate of Shawinigan, was elected first president of the federation. The other members of the executive committee are: Jean Paul Spattz, Montreal, 1st vice-president; J. A. Laurier, MacMasterville, 2nd vice-president; Fernand Lavergne, Shawinigan, secretary; and Maurice Laurence, also of Shawinigan, treasurer.

Que. Labour Board Heard 653 Petitions Last Year

A total of 653 petitions from associations wishing to be recognized as bargaining agents for a group of employees or employers was received by the Quebec Labour Relations Board during the fiscal year 1951-52, according to the province's *Statistical Year Book,* just published. Five hundred and thirty-six petitions were granted, 172 were refused, and the number of employees involved was 35,778.

At March 31, 1952, a total of 1,281 collective labour agreements, covering 195,713 employees, was lodged with the Board.

NOTE—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

* Population figures given are as at Sept. 1, for 1952, June 1 for 1951, Sept. 1 for 1950, June 1, for 1944 and 1939.

† Comparable statistics are not available.

(1) Labour Force Survey figures given are as at Nov. 22, 1952, Nov. 3, 1951 and Nov. 4, 1950. Estimates are based on 1951 census. Detailed figures will be found in tables A4-A7 of this issue

(2) Real earnings computed by dividing the Consumer Price Index into the average weekly earnings index base: average 1949 = 100.

(3) Newfoundland is included after April 1, 1949.

(4) Average 1935-39 = 100.

(5) Year end figures.

(6) Figures for 1939-44 are production data rather than shipments.

(7) Effective August 1, 1952, claimants on temporary mass lay-offs excluded from total of claimants.

TABLE C-4.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Man-Hours and Hourly Earnings, D.B.S.

Tables C-4 to C-6 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

Year and Month	All Manufactures			Durable Goods			Non-Durable Goods

D—National Employment Service Statistics

Tables D-1 to D-7 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Form UIC 751: This form provides a cumulative total for each month of all vacancies notified by employers, applications made by workers, and referrals and placements made by the National Employment Service. Also reported are the number of vacancies unfilled and applications on file at the beginning and end of each reporting period. Because the purpose of these data is to give an indication of the volume of work performed in various local National Employment Service offices, all vacancies and applications are counted, even if the vacancy is not to be filled until some future date (deferred vacancy) or the application is from a person who already has a job and wants to find a more suitable one.

Form UIC 757: This form provides a count of the number of jobs available and applications on file at the end of business on a specified day. Excluded from the data on unfilled vacancies are orders from employers not to be filled until some future date. The data on job applications from workers exclude those people known to be already employed, those known to be registered at more than one local office (the registration is counted by the "home" office), and registrations from workers who will not be available until some specified future date.

Claimants for unemployment insurance benefits who are subject to a temporary mass lay-off are not registered for employment, and thus are not included in the statistics reported on form UIC 751 nor in the main figures in form UIC 757. A temporary mass lay-off is defined as a lay-off either for a determinate or indeterminate period which affects 50 or more workers and where the workers affected, so far as is known, will be returning to work with the same employer. Commencing 15 days after the date of such a lay-off, claimants still on the live insurance register are registered for employment on their next visit to the office and henceforth are counted in both statistical reporting forms. Persons losing several days' work each week and consequently claiming short-time unemployment insurance benefits are not included in either statistical reporting forms unless they specifically ask to be registered for employment.

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DECEMBER, 1952 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars [2]
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to December, 1952				
MINING—				
Copper refiners, Montreal, P.Q.	1	200	5,000	Commenced July 14; for a union agreement; partial return of workers; unterminated.
MANUFACTURING—				
Boots and Shoes (Leather)—				
Shoe factory workers, Grand'Mere, P.Q.	1	200	4,000	Commenced November 26; for a new agreement providing for increased wages, union shop, check-off, pay for additional statutory holidays, seniority, rest periods, and hospital and accident insurance plans following reference to arbitration board; terminated December 24; negotiations; compromise.
Textiles, Clothing, etc.—				
Rayon factory workers, Louiseville, P.Q.	1	460	8,000	Commenced March 10; for a new agreement providing for increased wages, union shop, check-off and other changes following reference to arbitration board; partial return of workers; unterminated.
Cotton factory workers, Hamilton, Ont.	1	237	1,400	Commenced October 1; inter-union dispute *re* bargaining agency; terminated December 8; conciliation; in favour of employer.
Clothing and hosiery factory workers, Montreal, P.Q.	2	490	10,000	Commenced November 25; for a new agreement providing for increased wages and other changes following reference to arbitration board; unterminated.
Miscellaneous Wood Products—				
Wood furniture factory workers, Durham, Ont.	1	65	1,500	Commenced July 21; for a union agreement providing for increased wages, union security, two weeks' vacations with pay and pay for seven statutory holidays following reference to conciliation board; unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Plumbers and steamfitters, Edmonton, Alta.	27	436	4,250	Commenced November 12; for a new agreement providing for increased wages following reference to conciliation and arbitration board; terminated December 12; conciliation; compromise.
TRANSPORTATION—				
Other Local and Highway—				
Truck mechanics, etc., Vancouver, B.C.	1	18	230	Commenced November 26; for a new agreement providing for increased wages, reduced hours from 44 to 40 per week, pay for all statutory holidays and extension of vacation plan following reference to conciliation board; terminated December 16; negotiations; compromise.
TRADE—				
Steel products warehouse workers, Vancouver, B.C.	1	23	230	Commenced October 1; for a new agreement providing for increased wages following reference to conciliation board; terminated December 12; negotiations; compromise.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DECEMBER, 1952 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars [2]
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to December, 1952				
Retail store clerks, Bell Island, Nfld.	13	75	450	Commenced November 22; for implementation of award of conciliation board for increased wages in new agreement under negotiations; terminated December 6; negotiations; in favour of workers.
Strikes and Lockouts Commencing During December, 1952				
MANUFACTURING—				
Printing and Publishing—				
Lithographers, Oshawa, Ont.	1	[3] 21	150	Commenced December 3; alleged discrimination in allocation of work following installation of new equipment and for a union agreement; terminated December 12; negotiations; in favour of employer.
Miscellaneous Wood Products—				
Lumber mill workers, Interior British Columbia	52	1,000	7,500	Commenced December 3; for new agreements providing for increased wages and pay for three statutory holidays following reference to conciliation board; terminated by December 16; conciliation and negotiations; in favour of employers
Metal Products—				
Jewellery factory workers, Vancouver, B.C.	5	[4] 44	700	Commenced December 8; for implementation of award of conciliation board for increased wages, pay for nine statutory holidays and other changes in new agreement under negotiations; unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters, Cornwall, Ont.	1	54	54	Commenced December 12; for dismissal of a foreman alleged to be unfair; terminated December 15; return of workers; in favour of employer.
Carpenters, Fort William, Ont.	1	33	330	Commenced December 17; for a new agreement providing for increased wages retroactive to April 1, 1952; unterminated.
Sheet metal workers, Fort William and Port Arthur, Ont.	.....	150	1,500	Commenced December 17; for implementation of award of conciliation board for increased wages in new agreement under negotiations; unterminated.
Miscellaneous—				
Power plant construction workers, Campbell River, B.C.	1	126	1,890	Commenced December 10; for a union agreement providing for increased wages; terminated December 31; negotiations; in favour of workers.
TRADE—				
Wholesale grocery workers, Moncton, N.B.	1	14	95	Commenced December 1; for a union agreement providing for increased wages, reduced hours from 48 to 45 per week, check-off, etc., following reference to conciliation board; terminated December 8; conciliation; compromise.

[1] Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

[2] In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

[3] 16 indirectly affected; [4] 14 indirectly affected.

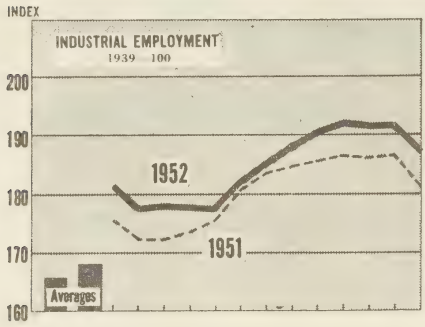
CURRENT manpower and labour relations REVIEW

MARCH 15, 1953

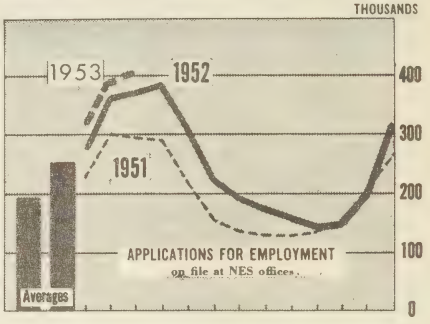
Economics and Research Branch, Canadian Department of Labour

Current Manpower Situation

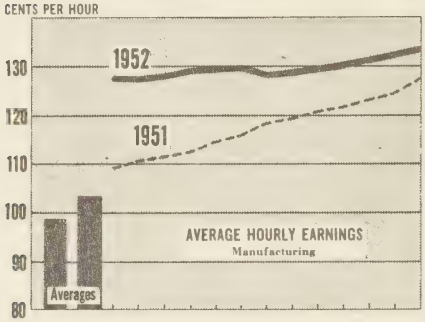
THE employment picture during February showed the same relative strengths and weaknesses as those evident during January and the earlier winter months. The economy was moving through a seasonally slack period of the year, overall employment showing little change during the month. At March 1, 75 per cent of paid workers were located in centres classified as labour surplus areas, compared with 77 per cent at February 1, 1953, and 87 per cent at March 1, 1952.



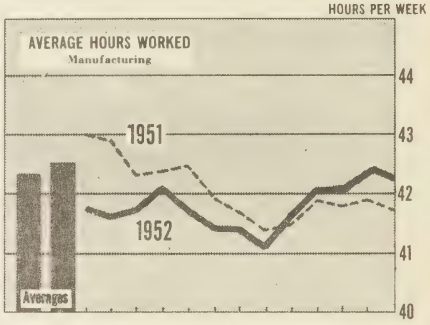
The seasonal employment trough had not yet been reached in the Quebec and Atlantic regions, where lower year-to-year levels of woods employment, combined with other factors, continued to depress the labour market. This trend, however, was offset to some extent during February by seasonally improved conditions in the Pacific region. Little change occurred in the Prairie region over the month but a slight seasonal increase in employment appeared in Ontario towards the end of February. This region has, in fact, maintained higher year-to-year employment levels throughout the winter.



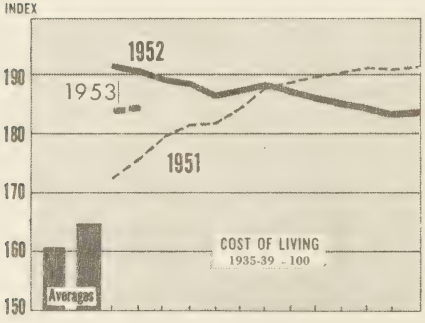
The Monthly Labour Force Survey, which provides an overall picture of current manpower utilization patterns, estimates that for the week ending February 21, 1953, there were 5,194,000 persons in the civilian labour force, a decrease of 7,000 from the figure reported for the week ending January 24. Of this total, 4,518,000 persons were at work for 35 hours or more during the week, a decline from January 24 of 6,000; 321,000 were at work for fewer than 35 hours, no change from the previous month; 176,000 had jobs but were not at work, a decrease of 7,000; and 179,000 were without jobs and seeking work, a decrease of 8,000.



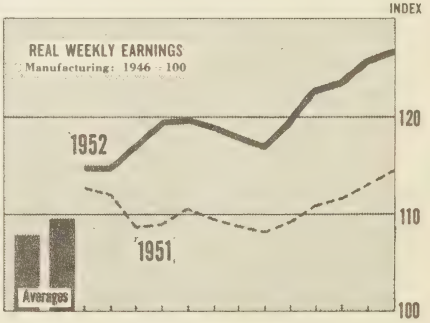
Of the 321,000 persons working fewer than 35 hours during the week, about 196,000 usually work part-time. Of the remaining 125,000, 33,000 were on short-time, 33,000 were away because of illness, 12,000 because bad weather and the remainder, 47,000, were not at work for various other reasons, including temporary lay-offs, vacations, or industrial disputes.

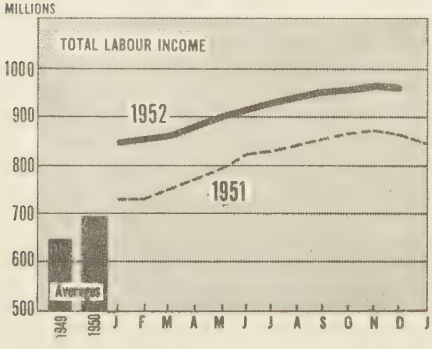


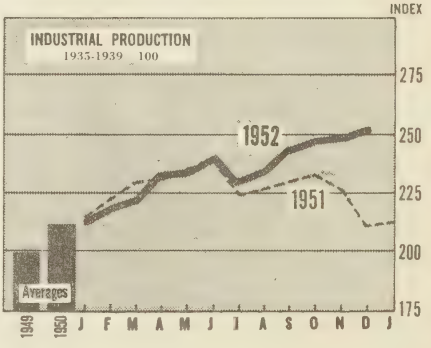
A Monthly *Labour Gazette* Feature



CURRENT LABOUR TRENDS







Of the 176,000 persons estimated to be with jobs but not working at all during the survey week, illness (69,000), vacations (21,000) and temporary lay-offs (52,000) were the main reasons for their idleness. Bad weather and industrial disputes were of minor importance.

It was estimated that 179,000 persons were without jobs and seeking work during the survey week. Another 14,000, who worked only part of the week, were also actively seeking other work, making a total of 193,000 persons actively seeking work during the week ending February 21. This represents about five per cent of all paid workers in Canada. In the previous survey week, ending January 24, 198,000 persons or about the same proportion of the paid worker group, were actively seeking work.

Supplementary information is available from data on registrations for employment at local NES offices. Between January 22 and February 19, 1953, the number of applications on file for all regions rose by about 17,000, bringing the total to 401,700 at the latter date. During the previous month the increase was about 147,000. The Atlantic (60,700) and Quebec (133,800) regions were largely responsible for the increase at February 19; for both regions the figures are much greater than a year earlier. The Ontario region (96,700), where total applications were tapering off, had some 16,000 fewer than at the same date in 1952, while number in the Prairie region (54,300) was moderately greater than last winter. The number of applications in the Pacific region (56,200) was also slightly above last year's total but is now decreasing steadily, according to usual seasonal patterns.

Current data on employment levels by industry show some interesting contrasts between the pattern developing at present and that which prevailed during the fall and winter of last year. At January 1, 1953, employment in the clothing industry was 15 per cent, in leather products 17 per cent, and in rubber products 5 per cent higher than a year earlier. In the durable goods group, motor vehicles and parts showed a year-to-year employment increase of nearly 12 per cent, electrical apparatus, 13 per cent, and heating and cooking appliances, 25 per cent. Slight year-to-year decreases occurred in the manufacturing of agricultural implements and wire products but these were minor compared to the increases recorded in the shipbuilding and aircraft industries, in which employment was about 17 and 63 per cent, respectively, higher than at the same time last year.

On the other hand, there was a marked reduction of employment in the forest industries, both on a seasonal and a year-to-year basis. Between December 1, 1952, and January 1, 1953, forestry employment across Canada decreased by about nine per cent. At the latter date employment levels in forestry were about 29 per cent lower than last winter. Construction employment dropped by about 12 per cent during December and January and the unusually mild weather made it unnecessary for many employers to hire casual labour for snow removal and related work. Employment in the maintenance of ways in railway transportation, for example, was nearly 10 per cent lower than at January 1, 1952.

Labour–Management Relations

SEVERAL settlements were reached during January and February, for the most part without interruption to production. There is some evidence that wage increases so far this year are smaller than those bargained on the average during 1952 but, at mid-March, negotiations were still in progress in several of the more important industries bargaining at this time of year.

The rise in the level of wages that occurred during 1952, in turn, was not quite as large as that during 1951. Studies of wage changes resulting from collective bargaining, while not altogether comparable, indicate that, in both years, about one-third of the workers covered received increases of between 10 and 15 cents an hour. In 1951, however, a considerable number of workers received larger increases, whereas in 1952 the majority received less. These studies are based on agreements received in the Economics and Research Branch.

Preliminary index numbers for about one-third of the industry groups covered in the Branch's annual wage survey also indicated, for the most part, smaller rises in 1952 than in 1951, although there were considerable variations between the industry groups.

Similarly, figures from the Dominion Bureau of Statistics of average weekly earnings showed an increase during 1951 of more than 11 per cent, while in 1952 the rise was of about seven per cent.

Wage Changes in 1,800 Collective Agreements Received in the Department of Labour, 1952

	Agreements Per cent	Workers Covered Per cent
No change	5	7
Less than 5¢	6	10
5¢ – 9.9¢	24	24
10¢ – 14.9¢	28	33
15¢ – 19.9¢	22	17
20¢ – 24.9¢	8	5
25¢ and more	7	4
	100	100

Although wage gains were smaller on the average in 1952 than in 1951, they meant more to Canadian workers who received them in terms of increased purchasing power. Whereas the consumer price index rose by almost ten per cent from January, 1951, to January, 1952, it declined by more than two per cent the following year. Workers who received raises during 1952 benefited, therefore, in 'real' as well as in 'cash' earnings.

Recent Settlements. Among recent important settlements, 1,200 employees of Frigidaire Limited at Scarboro (Toronto), members of Local 3570, United Automobile Workers of America (CIO-CCL), received a wage increase of two to eleven cents plus pension benefits under a recent agreement. The UAW likewise concluded an agreement covering 6,500 employees of Massey-Harris Company in Ontario, providing for wage increases of seven cents per hour for day workers and of varying amounts for other workers. This agreement also contains a clause stipulating that overtime is a voluntary matter for employees. Previously, an arbitration board had ruled that the employer had the right to require employees to work overtime.

About 1,000 workers received wage increases of eight per cent in

an agreement reached between *La Fédération Nationale des Gantiers* (CCCL) and the Canadian Glove Manufacturers' Association. At Sorel, an agreement between *Le Syndicat National de l'Industrie Métallurgique de Sorel* (CCCL) and Sorel Industries Limited provided for wage increases of five to thirty cents an hour for more than 2,000 workers.

The International Brotherhood of Electrical Workers (AFL-TLC) concluded an agreement with the Newfoundland Light and Power Company providing for a reduction in hours and a seven-cent wage increase.

Current Negotiations. At mid-March, negotiations or conciliation were in progress or about to begin in sections of the coal-mining, shipping, shipbuilding, electrical goods and construction industries.

Conciliation boards were being established for disputes in Nova Scotia and Alberta coal mines to deal with wage demands of the United Mine Workers of America (CCL).

In West Coast shipping, a conciliation board was established to deal with a dispute between the Seafarers' International Union (AFL-TLC) and three coastal shipping companies. Conciliation officers were appointed in two disputes involving the same union and (a) the Shipping Federation of Canada, covering deep-sea, dry-cargo operations on the East Coast, and (b) Canada Steamship Lines, one of the major companies in the St. Lawrence-Great Lakes shipping industry. A conciliation officer was also dealing with a dispute between the Canadian National Newfoundland Steamship Service and the Canadian Brotherhood of Railway Employees and other Transport Workers (CCL).

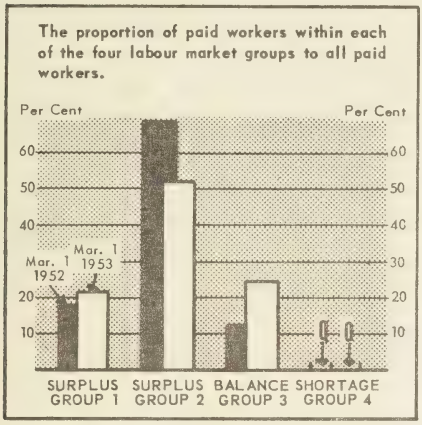
A dispute between five unions and the Port Arthur Shipbuilding Company had gone before a conciliation board.

Negotiations were in progress, or about to begin, in the construction industry in many Canadian centres. In Montreal, a conciliator was called in to assist in negotiations between the Montreal Builders' Exchange and the AFL Building and Construction Trades Council. The main demands are a 15-cent-per-hour increase and the 40-hour week. Wage rates in the construction industry rose by more than eight per cent in 1952. Increases were widespread last year and applied to almost all occupations in the major cities. The rates for most classes of tradesmen were augmented by gains ranging up to 45 cents an hour but most frequently between 10 and 20 cents. The most common increase accorded to tradesmen was 15 cents an hour and to labourers, 10 cents.

Strikes and Lockouts. During the first two and a half months of 1953, only 4,500 workers were involved in strikes, of whom about 1,000 were idle at mid-March. Almost half of these were members of CCCL affiliates on strike since last November at Grover Mills Limited and Marvyn Hosiery Mills Limited in Montreal. About 275 west coast grain handlers, members of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, Local 333 (CIO-CCL), have been on strike since February 16 for a new agreement embodying wage increases and other benefits. This latter dispute tied up grain shipments at the port of Vancouver. Time loss from all strikes over the first two months totalled about 55,000 man-working days. During the same period in 1952, about 120,000 days were lost through work stoppages.

Current Labour Statistics

(Latest available statistics as of March 10, 1953)



Principal Items	Date	Amount	Percentage Change From	
			Previous Month	Previous Year

Durables	December	305.7	− 1.9	+16.0
Non-Durables	December	212.9	− 8.3	+ 7.6

(a) Estimated by DBS on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. Labour force estimates are based on a sample survey of 30,000 households chosen by area sampling methods in more than 100 different areas in Canada. They are subject to sampling error. In general the smaller the estimate, the larger the relative sampling error. The estimates, however, do show the numbers in the various labour force categories with sufficient accuracy for practical purposes.

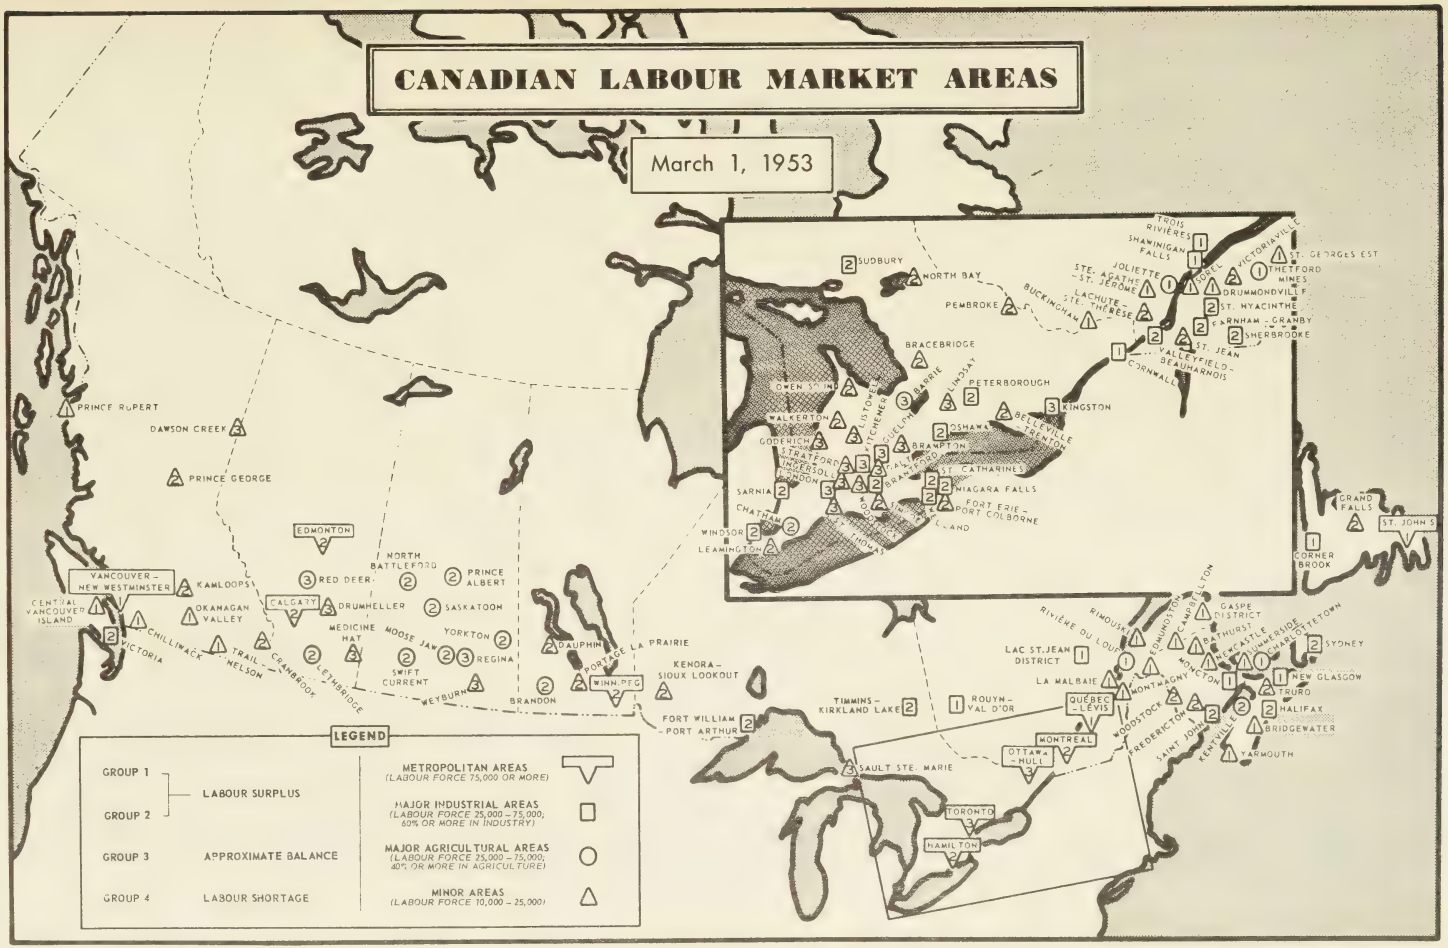
(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Manpower Situation in Local Areas

DURING February, the seasonal trend towards increasing labour surpluses began to turn in the opposite direction. Although labour surpluses developed or increased in some areas, they disappeared in a number of areas in the Ontario and Prairie regions. These changes meant that at March 1, compared with a month earlier, there were four fewer areas in the Group 2 and one more in the Group 1 labour surplus categories and three more in the Group 3 balanced category.

The table on this page, comparing the current situaiton with that of a year ago, clearly reflects the effect of the lower level of pulp-cutting operations this winter. In Eastern Canada, about 20,000 fewer workers were employed in logging operations at March 1 than at the same time in 1952 and 1951. The resulting increase in labour surpluses was spread over a large number of agricultural and minor areas, chiefly in the Quebec and Atlantic regions. This, in turn, brought nine additional agricultural and minor areas into the Group 1 surplus category at March 1 than a year earlier.



Conditions in industrial and metropolitan areas were, in general, somewhat move favourable than last year, largely because of higher employment levels in most consumer goods industries. In terms of the number of workers involved (see bar chart), the year-to-year decrease in the total number of areas in the balanced category was more than offset by the fact that in March, 1953, contrary to a year earlier, the Toronto metropolitan area was among those in the balanced category.

Labour Market Areas	Labour Surplus*				Approximate Balance*		Labour Shortage*	
	1		2		3		4

ATLANTIC

Employment levels during February continued their usual seasonal decline in most of the areas in the Atlantic region and remained considerably below those of last year. The main reason why the levels are lower this spring is the reduction in logging activities this year. In addition, construction was seasonally less active, intermittent lay-offs occurred in some manufacturing lines and alternative seasonal jobs in ice harvesting, snow shovelling and waterfront work were scarcer than usual this winter. All areas in the region reported surpluses at the beginning of March. Twelve were in the Group 1 labour surplus category while the remaining eight were in the Group 2 surplus category.

The decline in activity was particularly marked in New Brunswick, where non-agricultural employment at January 1 was six per cent lower than a year earlier. Forestry, construction and transportation recorded decreases in employment of thirty, thirteen and nine per cent respectively. In the other provinces of the region, the level of activity was about the same as last year. Since the low point in employment is not usually reached until the middle of April, labour surpluses may become more pronounced in some areas during the next few weeks. The demand for construction workers will pick up, however, when recruiting for the northern defence projects gets under way during April.

Metropolitan and Major Industrial Areas. Because primary industries with seasonal peaks in the summer are principal factors in the economy of the Atlantic region, total employment usually falls off sharply during winter. Reflecting this situation, seasonal declines occurred in St. John's Nfld., during February in construction, fishing, logging and shipping. The declines in construction and fishing were less marked than in previous years but the mild weather which favoured these activities made logging difficult. If the lack of frost and snow continues, the log haul will not be completed this season.

Labour surpluses persisted in all six of the major industrial areas. Corner Brook shifted from the Group 2 to the Group 1 surplus category as the closing of its inland port caused lay-offs at the shipping department of the pulp and paper plant. Manufacturing employment declined slightly in Moncton, as small lay-offs occurred at food processing and heating equipment plants, and in New Glasgow, as a number of production workers in the steel products industries were temporarily released. In Halifax, job opportunities for seamen, longshoremen and construction workers were few but employment in the shipyards was at a high level. The shortage of sheet metal workers, machinists, welders and marine electricians continued.

Major Agricultural and Minor Areas. Registrations for employment at NES offices increased in each of the 13 areas in these classifications and with the exception of Grand Falls were at higher levels at March 1 than at the same time last year. The reduced wood cut was the principal reason for lower employment levels in these areas. In addition, the absence of job opportunities for wood cutters in Maine this winter reduced the over-all demand for labour. During the month, activity in the fishing industry was reduced as the season for smelts ended and the slackening in the demand for fresh and frozen fish caused lay-offs at some processing plants.

QUEBEC

Employment continued to decline during February as the seasonal low point was approached in some industries, while the beginning of the upward seasonal trend in others was still a month or so away.

In areas in which manufacturing industries are concentrated, employment was at a record level for the time of year. Furthermore, a slight decline in labour surpluses occurred in a number of industrial centres during the month and, contrary to the general provincial pattern, several of these areas reported smaller surpluses than at the same time last year.

On the other hand, labour surpluses in many of the more rural areas of the region were reaching their winter peak by March 1, as log-cutting and hauling were almost completed. As the weather allows, workers released from woods work will go progressively to jobs on road construction, river drives, farms, fishing, transport or hydro-electric power, mining and other resource development projects.

On the whole, little change has occurred in the labour market situation of local areas in the Quebec region. Increases which occurred in labour surpluses were mainly in the rural districts where unemployment was already heavy. At March 1, 17 areas were in the Group 1 and eight were in the Group 2 labour surplus categories.

Metropolitan Areas. Montreal recorded a slight drop in registrations by women at NES offices during February, offsetting an increase in applications by men. The area, however, remained in the Group 2 surplus category. Registrations by men in construction and general unskilled occupations were heavy. The development of jobs for these workers will depend on weather conditions in Montreal and northern resource development areas. A strong demand existed for skilled sewing-machine operators in the clothing and the boot and shoe industries, for tool and die makers and skilled metal workers in aircraft manufacturing, for cabinet makers and upholsterers in furniture making, and for stenographers. In Quebec city the dominant feature of the employment situation was the gradual completion of logging activities. Steady production in the boot and shoe, pulp and paper and other manufacturing industries did little to offset the influx of woods workers.

Major Industrial Areas. The more heavily-populated industrial areas of the Eastern Townships continued in the Group 2 labour surplus category with very little change during the month. Compared with a year earlier, labour surpluses were reduced or relatively unchanged in all but the Sherbrooke area, where the iron and steel industry has been operating below capacity for some time. Lac St. Jean, Rouyn—Val d'Or, Shawinigan Falls and Trois Rivières, affected by the highly seasonal activities in Quebec's hinterland, were in the Group 1 surplus category.

Major Agricultural and Minor Areas. Twelve of the fifteen major agricultural and minor areas were in the Group 1 category, the remaining three in Group 2. These areas, while greatly influenced by logging activity and while they account for 60 per cent of all the labour market areas in the province, include only a little more than 15 per cent of the paid workers.

ONTARIO

The Ontario labour demand and supply situation changed only slightly during February. Most manufacturing industries were operating at or near capacity and construction employment continued at higher levels than usual in winter. Employment increased in the automobile, clothing, meat packing and defence-connected industries. This increase was partly due to the fact that automobile plants opened after re-tooling and clothing manufacturers began production of their spring lines. On the other hand, there were further lay-offs in some of the iron and steel plants and in the farm machinery industry during the month and labour surpluses increased slightly in some of the logging areas as mild weather shortened the spring haul.

Labour surpluses in Ontario probably reached a peak early in February; slight but steady declines have occurred since then. Only three of the areas considered in this analysis, however, changed from the surplus to the balanced labour market category during the month and one area moved from the Group 1 to the Group 2 surplus category.

Metropolitan Areas. February saw little change in the labour markets of the three metropolitan areas. In Toronto and Ottawa–Hull, labour demand and supply were still in approximate balance and some surplus existed in Hamilton. There were further lay-offs in the construction industry in Hamilton and Toronto early in the month and although plans were underway for the erection of some large industrial and commercial buildings in these areas, hiring in February was light. Closure of the logging camps in the Gatineau district increased the labour surplus in Hull but exceptionally active construction sites in Ottawa were providing more jobs than usual at this time of year. Shortages of machinists, toolmakers, die-setters and machine shop workers continued in Ottawa and Toronto and a shortage of engineers developed in both these areas.

Major Industrial Areas. Employment in the Oshawa, St. Catharines and Windsor areas increased rapidly in February as automobile plants resumed full production but a slight labour surplus still existed in all three areas at the beginning of March. The generally high level of manufacturing employment in Kingston, Kitchener and London and the high level of construction activity in Guelph kept labour demand and supply in approximate balance in these areas. Cornwall was still in the Group 1 labour surplus category and not much change is expected until the opening of navigation in April. In Timmins–Kirkland Lake the labour surplus increased somewhat as logging operations were completed but this district is still among the ten major industrial areas with only a slight labour surplus.

Major Agricultural and Minor Areas. Of the 21 major agricultural and minor areas listed, 11 had approximately balanced labour markets and 10 had labour surpluses. The recall of some iron and steel workers who had been laid off for year-end production changes brought Owen Sound into the Group 2 surplus category while the re-opening of the General Motors plant in Oshawa moved the Lindsay area into the balanced category. Likewise hirings for a defence order brought the Goderich area also into the balanced category.

PRAIRIES

Labour surpluses rose slowly during the first half of February and levelled off in the second half as the weather in Alberta and southern Saskatchewan moderated. At March 1, labour demand and supply were in approximate balance in six areas, one more than a month earlier and two less than at the same time last year. The remaining 15 areas in the region were in the Group 2 labour surplus category.

With the exception of coal mining and pulp-cutting, industries in the region continued to operate at levels higher than last year. The increase was greatest in Alberta, where the developments of the past few years in manufacturing industries continued to expand the base of industrial employment. Manufacturing employment in this province expanded by 13 per cent in 1952 and was accompanied by similar gains in trade and the service industries. This high rate of expansion will probably continue, since new construction in 1953 is expected to equal or exceed that of 1952.

Metropolitan Areas. Labour surpluses persisted in the three metropolitan areas, although the demand for labour in Edmonton and Calgary was rapidly approaching the point of approximate balance with the available supply. Shortages of engineers continued in Calgary, and in both centres the demand for sheet-metal workers, welders, electricians and plumbers exceeded the supply. The surplus of miners increased in both areas and large numbers of skilled and unskilled construction workers were still idle. It was expected that the available construction workers would be fully employed as soon as weather permitted. Much of the industrial and defence construction begun in 1952 remains to be completed and the value of new construction permits in the three months preceding February was almost double that for the corresponding period in the previous year.

The labour surplus in Fort William—Port Arthur increased slightly during February. Most of the increase was the result of the lower level of pulp-cutting operations, which employed 4,000 men at the end of the month, compared with 7,500 at the same time in 1952. Manufacturing industries in the area, however, continued to operate at a higher level than last year. Employment in aircraft manufacturing continued to increase but tool and jig makers were in short supply.

Major Agricultural and Minor Areas. Most areas in these classifications were in the Group 2 labour surplus category at the beginning of March. Labour surpluses increased in Drumheller, Kenora—Sioux Lookout, Medicine Hat, Red Deer and several smaller areas as a result of employment reductions in coal mining and logging; but preparations for spring farm work were reflected in an increasing number of orders for farm labour.

PACIFIC

Hiring in the Pacific region started its seasonal rise about two weeks earlier than usual this year. Total job applications at NES offices in the region reached a peak of 60,100 at January 22 but had declined by more than 5,000 by March 1.

Light snowfall this winter made possible an early start in construction, the most buoyant sector of the provincial economy. Current and prospective labour demand was particularly strong in residential building and in the larger engineering projects, both of which are expected to set new employment records this year. Employment in a number of other industries also rose seasonally but the retarding influence of reduced export demand was still apparent. The number of idle loggers fell sharply as the weather improved, although some camps that re-opened in January closed again during Feburary because of rapidly increasing log inventories. Excessive inventories of finished material were also responsible for the temporary closing of a pulp mill and the lay-off of some 350 workers. In addition, two more base metal mines closed during the month, reportedly because lead and zinc prices were not high enough to permit profitable production. Activity in the fishing industry was at its lowest point in more than a decade.

Excess supplies of labour were evident at all points of the region at the end of February, although the increase in activity was reducing the size of labour surpluses. At the end of February, 1953, six of the ten labour market areas surveyed were in the Group 1 and four were in the Group 2 surplus categories. At the beginning of March, five areas were in the Group 1 category compared with four areas in this category at the beginning of March, 1952.

Metropolitan and Major Industrial Areas. Vancouver—New Westminster was still in the Group 1 surplus category at the end of February, although the labour surplus had been cut down by the movement of workers to outlying construction and logging areas. Fifteen hundred men were rehired during the month for the Kitimat and Kemano developments and several other large construction sites in the region were expected to draw most of their labour requirements from this area. Construction within the city was not yet fully active but the value of permits issued during January was three times that for the same month last year, indicating that additional construction workers would soon be hired. Employment conditions in other industries were less buoyant, with lay-offs in effect or impending in sawmills, pulpmills and shipbuilding. Employment in both fish-canning and sheet-metal firms was well below last year's level.

Applications for employment on file with the NES office in Victoria decreased during the month, although the reduction was insufficient to bring the area into the balanced category. There was little change in the shipbuilding and construction industries although the volume of work on hand points to high employment levels next summer. The strike of grain handlers in Vancouver was responsible for a sharp increase in shipping activity in Victoria during the month.

Minor Areas. Logging operations in Central Vancouver Island increased moderately but the industry was hampered by weather and the uncertain market outlook. Surpluses of loggers were still substantial at all points in the area. In the Nelson—Trail area, the level of Kootenay Lake rose sufficiently to ease the power shortage that was partly responsible for the closing of several mines. Many of these will remain closed, however, until base metal prices improve. Labour demand in the Okanagan Valley was at the usual low level for this time of the year.

Manufacturing Plant Expansion in Quebec

MARKED industrial growth in the province of Quebec during the past five years is reflected in the large number of new jobs created through the construction of new manufacturing plants and plant extensions. It is estimated that about 30,000 additional production workers were required to staff the new manufacturing plant facilities completed from 1948 to 1952. This was about 30 per cent of total employment resulting from such industrial expansion throughout Canada in this period.

The 30,000 new jobs recorded by Economics and Research Branch surveys from 1948 to 1952 were in the following industries: textiles, 6,500; transportation equipment, 6,000; and electrical apparatus, 4,000. The chemical, food products, iron and steel, non-metallic minerals, paper products, and wood products industries each added about 1,500 workers. The remainder was divided among six smaller industry groups.

Total manufacturing employment in Quebec increased from 340,000 at the beginning of 1948 to 375,000 by the end of 1952. This increase took place almost entirely in 1951 and 1952. Aggregate manufacturing employment remained stable from 1948 to 1950 as diverse movements within the individual industries offset each other. Consumer goods manufacturing experienced a rapid growth in the early post-war years as many new plants were built to produce electrical appliances, furniture and textile products. At the same time, such industries as shipbuilding, iron and steel and aluminum were reducing employment. Increases in employment in consumer goods industries were small after 1950 but the slack was taken up by the defence-connected and capital goods industries, which expanded their plant facilities significantly during the last three years.

Textile manufacturing, the largest industry in the province in terms of employment, also provided the largest number of new jobs through plant expansion in the past five years. A number of large new primary mills, such as those producing cellulose fabrics, came into operation in the early post-war years. In 1951 and 1952, the emphasis was more on the construction of clothing manufacturing plants than on primary textiles establishments. In spite of a slump in the industry in 1951 and early 1952, its capacity continued to expand and 1,800 new jobs were created in 1951 and 1,500 in 1952 through the expansion of production facilities.

The rapid expansion of aircraft production in the past three years has provided large numbers of employment opportunities in the Montreal area. Employment tripled in the large assembly plant in the area with the extension of plant capacity. One new engine plant was completed in 1952 and two others, to be opened in 1953, are under construction. As a result, employment in the industry increased from 7,500 in 1950 to 15,000 in 1952 and further expansion in the work force is expected in 1953.

Recent developments in the Canadian chemical industry have been shared by the province of Quebec. The manufacture of industrial chemicals, and more recently of petro-chemicals, has developed rapidly, particu-

larly in the Shawinigan Falls and Montreal areas. Because of the high degree of automatic operation in the industry, the creation of 1,500 new jobs in the five-year period ending in 1952 represents a sizeable increase in both plant capacity and production. Several large new petro-chemical plants are in the planning or construction stages.

The increasing rate of exploitation of the vast mineral wealth of the province has caused a continued growth of employment in the secondary metal industries. About 2,500 workers have found jobs since 1948 in new manufacturing plants in the non-ferrous metal and non-metallic mineral products industries. Copper, asbestos and titanium processing industries are prominently represented in this group. A further addition to the titanium refinery in Sorel, which was completed in 1950, was carried out last year. Quebec's aluminum industry, with the world's largest installation, has been developing rapidly in the last two years. This development has included the expansion of hydro-electric and chemical plants as well as the construction of new pot-lines.

Montreal's position as a major petroleum refining centre was enhanced by the construction of seven refineries or refinery expansions from 1948 to 1952. The completion of these new facilities resulted in an increase in employment, from 1948 to 1952, estimated at about 1,000 workers, although labour content in this industry is relatively low. Most of the expansion was completed by 1951 and only one small addition (in terms of employment) took place in 1952.

The rate of capital investment in the pulp and paper industries in the province has been very heavy during the post-war period but in many cases this has been in the form of new machinery and equipment rather than the construction of new plants. Most of the new factories completed were for the manufacture of secondary paper products, such as containers, writing paper and waxed paper. No new newsprint mills have been built but two establishments for the manufacture of sulphite pulps and groundwood were completed. In all, some 1,500 jobs were created through plant expansion in this industry in Quebec during the last five years.

The 2,750 new jobs created in electrical apparatus manufacturing in the same period represent a growth both in the manufacture of consumer goods and of heavy electrical equipment. In general, the consumer goods' plants increased production rapidly until 1950, and less rapidly since then, while plants manufacturing electronic equipment, electrical control equipment, aviation electrical equipment and heavy electrical apparatus have been expanding considerably since 1950.

In 1953, it is expected that there will be a decline in the volume of industrial construction in the province, following a similar trend for the country as a whole. Most defence plants still under construction will be completed by 1953 and will require additional workers. Five new chemical plants are scheduled for completion in 1953, with staff requirements set for approximately 300. Further development of metal smelting and refining facilities is under way, with the possibility of the construction of a new zinc refinery. However, the carryover of industrial construction in Quebec from 1952 to 1953 is smaller than the unusually high volume carried over from 1951 to 1952.

Notes of Current Interest

Labour Presents Briefs To Federal Cabinet

Canada's major labour organizations presented their annual briefs to the Government this month.

The Trades and Labour Congress of Canada presented its brief on March 3, the Canadian Congress of Labour on March 6, the Canadian and Catholic Confederation of Labour on March 10 and the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods on March 13.

Detailed accounts of the four briefs and the Government's replies will appear in the April issue of the LABOUR GAZETTE.

Louiseville Strike Ends With Contract Unsigned

The long strike by the Textile Workers' Syndicate (CCCL) at Louiseville against Associated Textiles Limited came to an end in mid-February without the renewal of the contract, when the syndicate decided not to cancel the membership of those who returned to work.

After a strike lasting exactly 11 months, the dispute has not been settled but the syndicate, in view of the failure of the latest attempts at settlement and the unlikelihood of inducing the company to sign a collective agreement acceptable to the members within a reasonable length of time, has decided to allow the textile workers to return to work.

This strike, which began on March 10, 1952, when more than 800 textile workers left their jobs, has been one of the most bitter in the history of trade-unionism in the province of Quebec. It has been marked by prosecutions, by intervention on the part of the Provincial Police, and by the reading of the Riot Act. The CCCL even came close to ordering a general work stoppage by its 93,000 members throughout the province.

The plant reopened its doors on July 21 and some 500 workers were employed there when the syndicate made its decision.

The basic rate of pay is now 85 cents an hour, 12 cents more than it was when the strike was called. The main issue was not the wage question but the problem of union recognition.

* * *

The 8-month strike at Durham, Ont., was called off February 18 by the International Woodworkers of America (CIO-CCL) without a settlement being reached. The union represented 126 employees of the Durham Furniture Company, Limited, when the strike began July 21, 1952. At the end of January, some 60 employees were still out of work in the dispute over wage increases, union security and vacations.

CCL Will Seek Action On 20-Point Program

The Political Action Committee of the Canadian Congress of Labour has adopted a 20-point program for which the Congress will seek the support of Canada's political parties.

The program calls for: higher unemployment insurance benefits, payment of benefits during illness, social security legislation, a national health plan, federal aid for equal opportunities for education, a national labour code, the check-off of union dues, full employment, a guaranteed annual wage, a low-cost housing program, vacations with pay, statutory holidays on a national level, a 40-hour week and a minimum wage, old age pensions of $65 at age 65 without a means test, lower income taxes, an excess profits tax, international trade, a reduction in the cost of living, higher family allowances and a bill of rights.

3 Provinces Forecast Labour Legislation

Speeches from the Throne at the openings of three provincial legislatures in February contained statements of interest to labour.

In Ontario, the Speech from the Throne forecast amendments at this session to the Unemployment Relief Act and the Workmen's Compensation Act.

In New Brunswick, the Lieutenant-Governor said legislation will be submitted to strengthen employer-employee relations in the province.

In Saskatchewan, the Throne Speech announced that amendments to the Workmen's Compensation (Accident Fund) Act "designed to increase certain benefits" would be introduced. A Rehabilitation Act will be submitted to the Legislature.

AFL Calls on Affiliates To Seek Wage Increases

The American Federation of Labor has urged all its affiliates to seek higher wages this year. The 15-member AFL executive board, holding its mid-winter meeting at Miami Beach, Fla., approved an economic report which declared that a rise in workers' spending power is needed to avert a depression.

The report, titled "Wages and Future Economic Stability" and prepared by Boris Shiskin, AFL Economist, said wages are not keeping pace with productivity. "An ominous disparity has developed," the report stated, "between how much workers are able to produce and how much they are able to buy."

According to the AFL study, productivity from 1949 until the end of 1952 advanced 13.2 per cent while the factory wage level, measured in constant dollars, went up only 7 per cent. If this disparity is allowed to continue for several more years, the report continued, production will outrun consumption and a depression as serious as that of 1929 will result.

Some observers feel that the report's emphasis on productivity as the chief justification for wage increases indicates that AFL unions will place less reliance this year than in other years on rising living costs as their major argument for pay increases.

Wage Increase Chief Aim Of CIO Unions in 1953

Wage increases head the list of 1953 bargaining goals announced by some major unions in the United States.

The Textile Workers Union of America (CIO) in New England will seek a 6.5 per cent pay boost for 90,000 cotton and rayon workers. Last June an arbitrator's award reduced this group's wages.*

The woollen and worsted branch of the union, however, has decided not to seek an increase but will resist wage cuts.

A "substantial" wage increase will be demanded by the CIO communications workers; the amount has not been stated. In addition, the union wants higher retirement benefits, shorter wage progression schedules, a hospitalization, surgical and medical plan, and an improved grievance procedure.

*As recently as December 9 a local of this union in Putnam, Conn., agreed to a nine-cent-an-hour pay cut to improve an employer's competitive position.

The International Woodworkers of America (CIO) are asking for a 22½-cent hourly pay boost; in addition they want a six-hour instead of the present eight-hour work day. Present IWA contracts in the Northwestern States expire April 1.

The United Auto Workers (CIO) want the annual productivity increase raised from four to five cents an hour and 21 cents of the present 25-cent-an-hour cost-of-living bonus added to basic wage rates.

Although the UAW's five-year contract with General Motors still has two and a half years to run, Union President Walter Reuther is urging the company to grant wage and pension improvements this year because of the introduction of the new consumer price index in the United States. The agreement contains an escalator clause and Mr. Reuther contends that a change in the Government's method of computing the cost-of-living index calls for re-opening of negotiations.

The United States Bureau of Labor Statistics is preparing a formula for linking the old index, based on average prices for the 1935-39 period, with the new index, which is based on 1947-49 prices. But the UAW contends that this is a matter for negotiation.

The International Union of Electrical Workers (CIO) has issued and sent to all employers in the industry a complete outline of its 1953 collective bargaining program. The goals outlined are: wage increases, by automatic escalator clauses, in proportion to the increase in living costs; an automatic productivity increase of not less than 2½ per cent to 3 per cent a year; revision of incentive systems to assure that workers' take-home pay rises in proportion to production increases; a guarantee of equal pay for equal work for women, with a minimum of not less than $1.25 an hour; and an employment security fund to supplement state unemployment compensation.

The Amalgamated Clothing Workers of America (CIO) is demanding a general 15-cent hourly increase for workers in the men's clothing, shirt and cotton garment industry.

U.S. Assistant Secretary

John W. Edelman, legislative representative of the CIO Textile Workers, has been nominated as an Assistant Secretary of Labour of the United States. During the Second World War Mr. Edelman set up the labour office in the Office of Price Administration.

1953 Wage Demands Studied by CCCL

A committee has been set up by the Canadian and Catholic Confederation of Labour to study the question of 1953 wage increases for its members who are in low wage groups and for those whose wages are lower than in similar industries in other provinces, Gérard Picard, CCCL General President, has said.

The committee is composed of spokesmen for the 17 federations representing all the industries in which the group has membership. Prominent industries in the group are textile, metal, mining and paper making. Altogether the confederation has more than 90,000 members throughout the province.

Mr. Picard said that in some cases the Confederation will direct its attention to fringe benefits for workers but in the low-paid industries there will be a tendency to demand upward wage adjustments.

Wage Increase Denied U.K. Cotton Workers

A claim for a 10-per-cent wage increase for 27,000 workers in the British cotton spinning and weaving industry has been rejected by the Industrial Disputes Tribunal. The claim was referred to the Tribunal last November when negotiations between the employers and the unions became deadlocked.

The unions based their claim on cost-of-living increases since the industry's last wage boost in 1951. The employers argued that, because of harder selling conditions and keener competition from rivals overseas, an increase at the present time would create added difficulties for the textile industry.

British Coal Miners Given Wage Increase

Miners in Great Britain have been granted a six shilling weekly pay rise. The State Coal Board, which took over the industry in 1947, agreed to the increase for about 400,000 men in the lowest-paid brackets.

In return for the increase, the mine union promised to recommend that Britain's 700,000 miners continue to work voluntarily on Saturdays.

A spokesman for the coal board said this Saturday shift was important because it helped maintain Britain's export quotas.

Rail Workers' Wages Rise 110 Per Cent Since 1926

In 25 years, the average annual earnings of Canada's steam railway employees rose 110 per cent, from $1,479 in 1926 to $3,110 in 1951, according to the Dominion Bureau of Statistics. The 1951 figure is 97 per cent above the 1939 average, $1,578.

This information is included in a DBS Reference Paper, *Steam Railway Employees and Their Compensation, 1926-1951,* published last month.

NAM Opposed to Link Of Wages, Productivity

Any attempt to link wages with productivity is impractical and undesirable, stated the National Association of Manufacturers in the United States recently.

The Association drew this conclusion from a study made by its research department of "the available facts on productivity and their economic significance" and "the performance of the entire economy in utilizing the services of workers".

While it recognized a substantial increase in over-all output in the last 50 years, the Association declared that too little was known about year-to-year fluctuations and future trends to permit wages and efficiency to be closely tied.

Not Workable Concept

The Association said that so many factors entered into productivity and so many obstacles barred dependable measurement of its growth that the tying of wages to estimates of output per man hour was not a workable concept.

Expressing productivity increases in terms of lower prices would be one of the best ways of ensuring that they would be shared by all segments of society, including pensioners and others on fixed incomes, the Association said.

In its study the Association considered the effects of stepped-up scientific research, increased capital investment, full employment and the defence boom.

"It is impossible," it declared, "to foresee just where the balance will be struck and whether productivity will grow faster or slower than it has in the past.

Unsatisfactory Tools

"Even if there were grounds for conceding the desirability of a policy of linking wages with productivity, the statistical tools for carrying it out are crude and thoroughly unsatisfactory," the study declared.

70169—2½

Histadrut Seeks to Link Wages to Productivity

The General Federation of Labour in Israel (Histadrut) is experimenting with a system of linking wages with production, said Moshe Bitan, the Federation's American representative, in an interview in Montreal recently. Production boards, composed of representatives of management and labour, are being set up in factories to work out systems for paying employees for increased output.

"We don't want the Soviet system of one worker competing against another, but we want collective competition between the shops and the factories to step up our production," said Mr. Bitan. He pointed out that the premium system would probably differ from industry to industry.

Mr. Bitan said that the Federation thought of itself not as a pressure group to squeeze more out of the national income for the worker but as an organization responsible for the economy of the country.

"We know if the country goes bankrupt the workers would be the first to suffer," he said.

Seventy-five per cent of the workers in Israel are organized under the Federation, said Mr. Bitan.

November Labour Income Breaks All Records

Again in November Canadian Labour income broke all previous records, reaching a total for the month of $960,000,000, the Dominion Bureau of Statistics has estimated. October's total was $951,000,000 and that for November 1951, was $872,000,000.

The total for January-November 1952, was $9,910,000,000, compared with a total of $8,867,000,000 for the same 11 months the year before.

Only labour income in the primary industries—agriculture, forestry, fishing, trapping and mining—remained unchanged in November; all other major industrial groups recorded increases. But even in the primary industries the 11-month total in 1952 was higher than that for the same period in 1951.

Swedish Steel Workers Settle for 1952 Wages

Trade unions representing approximately 150,000 metal workers in Sweden have signed with the industry an agreement for 1953 which contains no wage increase. Wage provisions in last year's contract will continue in force.

Since the metal industry workers form the largest single group in the country, it is expected that their agreement will set the pattern for all wage agreements in Sweden for the coming year.

This year it was decided that wage negotiations in Sweden would be conducted on an industry basis, rather than follow the practice of recent years of negotiating over-all wage agreements between the Labour Federation and the Swedish Employers' Association (L.G., Aug. 1947, p. 1124).

The unions decided not to press for over-all increases in wage rates because of the general feeling that Swedish export industries are labouring under higher relative costs than other European competitors and that, to a great extent, these higher costs result from high wage rates. Instead, the unions decided to concentrate on contract clauses which provide for equal pay for men and women and for additional compensation in work involving hardship.

Norwegian Labour Body Argues Against Raises

A resolution urging its members not to renounce the wage agreements expiring in 1953 has been passed by the National Council of the Norwegian Federation of Trade Unions. The Council, composed of 135 representatives of the 40 national trade unions in Norway, stressed the danger of a new price rise resulting from higher wages.

The new state taxation scheme which will come into effect in the autumn will mean a substantial tax reduction for most working class families, the Council pointed out. It stated that if the cost of living in Norway does not rise, this tax alleviation will correspond to a wage increase for many workers.

The resolution appealed to the Government to continue its efforts to reduce the cost of living and urged other trade and industrial organizations to follow the lead of the unions in trying to keep prices down.

Teamsters Move Headquarters

The International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (AFL) has transferred its headquarters from Indianapolis, Ind., to Washington, D.C. Temporary offices have been set up in the building of the National Association of Letter Carriers while the Teamsters look for a building of their own.

Personal Income Here $17,146,000,000 in 1952

Personal income in Canada amounted to a record $17,146,000,000 in 1952, according to the White Paper tabled in the House of Commons the day before the Budget was brought down. The previous high, reached in 1951, was $15,582,000,000.

The eight-per-cent increase, the White Paper said, was almost wholly a gain in "real" income, since the consumer price index averaged only 2·5 per cent higher than in 1951.

Personal savings were 8·2 per cent of income after taxes in 1952, 8·3 per cent in 1951, 4·8 per cent in 1950 and 9 per cent in 1949.

Personal Income in U.S. At Record Level in 1952

Personal income in the United States rose 5·5 per cent during 1952 to reach an all-time record of $268·5 billion, the Department of Commerce reported recently. However, the average wage earner's net income during the year was about the same as in 1951, when the national income reached $254 billion, because the total income was spread over a greater population and higher taxes and prices cut deeply into take-home pay.

Of the $14 billion income rise during the year, $8 billion was made up of wage increases. All major groups in the country shared in the gain except farmers, whose earnings fell 3·2 per cent from $15·5 billion in 1951 to $15 billion in 1952.

While the dollar increase in total income was 5·5 per cent, higher taxes held the gain in disposable income—amount after tax—to four per cent. High prices helped further to reduce net incomes to the 1951 level.

Baron Resigns as Head Of UTWA in Canada

Sam Baron, one of the central figures on Canada's labour scene for the past eight years, resigned from his position as Canadian Director of the United Textile Workers of America (AFL-TLC) at the beginning of March. He plans to return to the United States.

Mr. Baron took over as head of the UTWA in Canada last May after the union had dismissed Communist members of its executive. Before that Mr. Baron was Canadian Director of the Textile Workers Union of America (CIO-CCL). He left that post in 1951 after a disagreement with the union's International President.

He took part in the CCL's fight to expel Communist elements from its membership and was one of the founders of the International Confederation of Free Trade Unions.

Dr. McNally Again Heads Committee on Disabled

Dr. G. Fred McNally, former Chancellor of the University of Alberta, has been re-elected Chairman of the National Advisory Committee on the Rehabilitation of the Disabled. The Rev. J. C. Beaudin, chaplain of the Victor Doré School for Crippled Children, Montreal, was again named Vice-Chairman.

The elections were held at the close of a two-day meeting of the Committee in Montreal last month.

Elected to the executive committee were: Dr. L. W. Shaw, Charlottetown; J. S. White, Regina; Dr. Hoyle Campbell, Toronto; Max Dodds, Toronto; Roy Campbell, Westmount, Que.; Col. E. A. Baker, Montreal; and R. Edgar Guay, Quebec. Mr. Dodds represents organized labour on the Committee.

1952 Housing Completions Drop 10 Per Cent

Construction began on 83,246 new dwelling units during 1952, a number more than 21 per cent higher than the 68,579 begun the previous year, the Dominion Bureau of Statistics has reported. The number completed during the year, however, was 10 per cent lower: 81,310 were completed in 1951, only 73,087 in 1952.

Under construction at the end of 1952 were 55,689 units, 21 per cent more than the 45,926 under construction a year ago.

Both completions and starts were higher in December than in the same month of 1951, completions numbering 7,076 compared with 6,499 and starts numbering 3,732 compared with 2,217.

December was the sixth successive month of higher starts and the fourth of higher completions.

* * *

January housing starts in the United States were nearly seven per cent fewer than December's but nine per cent more than in January 1952. The January 1953, total was 71,000, according to preliminary estimates of the Bureau of Labour Statistics, United States Department of Labour. Starts in December numbered 76,000 and in January 1952, 64,900.

CIO's Allan S. Haywood Died February 21

Allan S. Haywood, Executive Vice-President of the Congress of Industrial Organizations, died February 21 in Wilkes-Barre, Pa.

The 64-year old union leader, a bitter foe of Communism during his long career in organized labour, collapsed while addressing a union meeting and died on the way to hospital.

Mr. Haywood rose from a coal miner's job in England to the CIO's second-ranking office. He was familiarly known as "Mr. CIO" because of his success in organizing workers in the mass production industries. After the death of Philip Murray last November, he lost the contest for the presidency of the 4,000,000-member labour organization to Walter P. Reuther but was re-elected Vice-President, a position he had held since 1942.

Mr. Haywood was born in England in 1888. From 1901 to 1906 he was a member of the British Miners' Federation.

Joined Mine Workers

He emigrated to the United States in 1906 and joined the United Mine Workers of America. From 1936 to 1937 he was an adviser to the United Rubber Workers of America and was active in negotiations between the United Auto Workers of America and the major automobile manufacturers.

In 1937 he was appointed Regional Director for the CIO in New York City. From 1938 to 1940 he was the Eastern Area Regional Director of the UAW.

Mr. Haywood was a member of the Steelworkers Organizing Committee and helped to found the United Steelworkers of America. He was National Director of Organization for the CIO since 1939.

The funeral was held in Taylorville, Ill., where Mr. Haywood made his home when he entered the United States.

3 Well-known Canadian Unionists Died in Feb.

Three Canadian labour executives died during February. They were Henry William Watts, editor of the Vancouver *Labour Statesman* and a former secretary of the Vancouver, New Westminster and District Building Trades Council (AFL), who died in Vancouver February 15; Maurice Turgeon, secretary of the Trucking Industry Parity Committee and former executive secretary of the Canadian and Catholic Confederation of Labour, who also died February 15 in Quebec; and Cecil M. Shaw, organizer for the International Brotherhood of Electrical Workers (AFL-TLC), who died in Toronto February 16.

Mr. Watts had been editor of the *Labour Statesman* for more than 30 years. Mr. Shaw was considered an authority on apprenticeship training. During the war, he was a member of the Regional War Labour Board for Ontario. For 30 years he served as financial secretary of Local 353 of the IBEW.

Mariano Bishop Dies, Was TWUA Official

Mariano Bishop, who defeated George Baldanzi last May for the post of Executive Vice-President of the Textile Workers Union of America (CIO), died in Passaic, N.J., on January 2.

Mr. Bishop was 46 years of age. He held his first union post in the early 1930's as business agent for the Printing Workers Union, an affiliate of the United Textile Workers of America (AFL).

In 1938 he became leader of the textile workers' organizing committee and two years later, Regional Director of the TWUA in the southeastern Massachusetts and Rhode Island area.

He became northern cotton-rayon director of the union in 1943 and National Director in 1945.

William Pollock, Executive Secretary-Treasurer since the establishment of the TWUA in 1939, has been temporarily appointed Executive Vice-President to succeed the late Mr. Bishop. Temporarily appointed Executive Secretary-Treasurer was John Chupka, for several years wool and worsted director.

Nearly Million Jobs Found by NES in 1952

Workers recruited by the National Employment Service filled a total of 981,297 jobs during 1952. This was an increase of 55,148 over the 1951 figure of 926,149 and sets a new record for the postwar years.

During the year, the majority of applicants referred to jobs were accepted by employers.

Of the total placements made by the NES in 1952, 802,885 were regular placements, 178,412 were casual jobs. Included in the total placement figures were 6,819 placements of executive and professional personnel and 14,900 placements of handicapped persons.

1952 Rehabilitation Gains Exceed Past Decade's

"We, who for years saw the need of a national co-ordinated program for the civilian disabled, can now see that more has been accomplished in the last year than was accomplished in the previous ten years in this direction," said Dr. G. Fred McNally, former Chancellor of the University of Alberta and Chairman of the National Advisory Committee on the Rehabilitation of the Disabled, in addressing the opening session of the Committee in Montreal February 17, 1953.

Ian Campbell, National Co-ordinator of Civilian Rehabilitation, outlined some of the progress which had been made to date. Recognizing the necessity of knowing as precisely as possible the needs of those handicapped people who were unemployed and seeking work, the Committee had at its last meeting recommended a pilot survey of the handicapped registered for employment in Montreal. Since then the survey had been approved by the Government and was now well underway. Although it was as yet too early to judge the results fairly, it was evident so far that about 50 per cent of those registered would be greatly aided in finding and holding suitable jobs, if they were provided with a variety of forms of aid, including medical treatment and training.

Considering Further Steps

On the subject of training, Mr. Campbell pointed out that during the past six months the number of handicapped receiving training under the Federal-Provincial Training Agreements had increased, and stated that further steps were now under consideration to broaden the scope of training for the disabled needing it.

Headway with another recommendation of the National Committee had also been made in the direction of producing more trained personnel to handle the more highly technical problems of the rehabilitation program. Approaches had been made to the various universities across Canada with a view to increasing the number of young people entering or specializing in physical medicine with a view to entering the rehabilitation fields. As a direct result of previous efforts by the National Committee there was already an increased interest in the occupational and physiotherapy fields. Sparking this program was Dr. Hoyle Campbell, of Toronto, representing the Canadian Medical Association on the Committee.

The National Co-ordinator pointed out that Canada was not losing sight of the fact that much could be learned from other nations' experience in the field of rehabilitation; direct liaison had been established internationally for this purpose, he stated. The Committee endorsed a recommendation from Arthur MacNamara, Deputy Minister of Labour, that the Co-ordinator visit the United Kingdom to study progress in the field of rehabilitation there.

* * *

The work of the National Advisory Committee on the Rehabilitation of the Disabled was described by the Hon. Milton F. Gregg, Minister of Labour, in a speech to the Local Council of Women, Montreal, on February 26.

U.S. Wage Controls End, Some Price Ceilings, Too

Wage and salary controls in the United States were suspended and price ceilings on many items removed by President Eisenhower in an Executive Order dated February 6.

The order is designed to eliminate in an orderly fashion the controls under which the economy of the country has been required to operate for the past two years.

All wage and salary regulations and orders issued by the Wage Stabilization Board and other stabilizing agencies are suspended. Adjustments in compensation, including retroactive payments, which employers and unions agree on may now be put into effect without the restraints imposed by the controls.

In issuing the order, the President said the production of and demand for goods and services were approaching a practicable balance and that the earliest possible return to freedom of collective bargaining would serve to strengthen the national economy and thereby the national security. He said that it was now appropriate to permit adjustments of wages, salaries and other compensation arrived at through the process of free collective bargaining or other voluntary action to become effective.

In the first of a series of orders under which all price controls will be lifted, the President authorized the Office of Price Stabilization to decontrol a wide and varied list of consumer goods, including all meat products, all furniture, all apparel, all meals sold in restaurants and public eating places, and nearly all the thousands of items normally sold in department stores.

These controls, the President said, have not been effective in protecting the family budget against high prices.

APPRENTICESHIP NOTES

"Employers Must Lead In Training Apprentices"

Support for Ontario's new trade-school system of apprentice training, in which $600,000 has been invested during its first year of operation, was urged recently by an official of the Ontario Department of Labour.

Speaking to a meeting of the Sudbury Builders Exchange on the shortage of skilled workers, Cy Blackwell, District Inspector of Apprenticeship for Northwestern Ontario, said employers must take on the responsibility of building up the country's trades labour force.

In all the 14 officially designated trades, he said, the lack of fully-skilled workers is being felt and will grow worse unless industry itself undertakes to correct it.

The change-over from an agricultural to an industrial economy is seen by Mr. Blackwell as the cause of the shortage. Wartime expansion and industrial practice since have tended toward specialization, with the result that too few tradesmen have the all-around knowledge of their trade necessary for a high degree of skill in it.

Government to Continue Training of Draftsmen

Government departments at Ottawa have received notification from the Civil Service Commission that the Staff Training Division will continue its training program for student draftsmen in an endeavour to meet the present shortage.

The program provides for two courses, one in map drafting and one in general drafting, to run concurrently over a period of six months.

According to present plans, the school will get underway in the early summer.

Company Trains Workers Before it Opens

Because a company planning to open a new plant in Newfoundland later this year found it would not be able to find enough qualified mechanics and machinists to fill the jobs which it will have available, it has embarked on a training program which, it hopes, will build up over a period of years a skilled labour force.

According to a report in the St. John's *Evening Telegram,* 17 boys from widely scattered parts of the province have already begun training at the plant's school, although full details of the course are still being worked out by the company —Canadian Machinery and Industries Construction Limited—and the Canadian Vocational Training Branch of the federal Department of Labour.

The training program, the *Telegram* states, is an integral part of the operation of the plant. The company, when it established its plant in Newfoundland, agreed with the provincial Government to enter the apprentice training field on an extensive scale.

Plan Permits Half Day At Work, Half at School

In an attempt to halt the loss of students to industry at an early age, the Niagara Falls Board of Education has adopted a plan, in which local employers are cooperating, for attendance at classes on a half-day basis.

Arrangements have been made so that boys and girls who are forced by economic reasons to leave school, and those who leave only because an industrial wage is more attractive than school, can work in a shop or office during the mornings and attend classes during the afternoon. Thus the students can complete their education and earn a wage at the same time.

Newfoundland Appoints Apprenticeship Director

Newfoundland has taken the first step in implementing the Apprenticeship Act, 1952, with the appointment of W. J. May as Director of Apprenticeship. Mr. May will be charged with the administration of the Act.

A native of St. John's, Mr. May has been an active trade unionist. He was at one time Secretary of the Newfoundland Federation of Labour and has held office on the provincial Labour Relations Board and the Workmen's Compensation Board.

An Apprenticeship Board consisting of equal representation from labour and management and one official from each of the Department of Labour and the Department of Education will be appointed to designate the trades in which apprenticeship regulations will be enforced and to regulate apprenticeship contracts.

1952 Immigrants Fewer Than 1951 by 15 Per Cent

Fifteen per cent fewer immigrants were admitted to Canada during 1952 than during the previous year, the Department of Citizenship and Immigration has reported. Immigration totalled 164,498 in 1952, compared with 194,391 in 1951.

Immigrants from the British Isles, however, were 36 per cent more numerous and immigration from the United States increased 20 per cent. North European arrivals were 13 per cent fewer and those from other countries, 40 per cent fewer.

A gain was recorded in the number of Canadians returning from the United States, 4,707 returning in 1952 compared with 3,635 in 1951.

January immigration decreased 57 per cent from the same month last year. In the first month of 1952, 13,131 immigrants reached Canada; in January this year, the number dropped to 5,627.

Only immigrants from the United States were more numerous this January than last. In January 1953, 747 persons emigrated from the United States to Canada; a year earlier, 565 came. The increase was 32 per cent.

Immigrants from the British Isles were 39 per cent fewer in January this year than in the same month last year; from North Europe, 62 per cent fewer, and from other countries, 70 per cent fewer.

Australia Reduces Immigration Quota

Because of the current economic slump, Australia has cut its immigration quota for the next six months. Last year's quota was 150,000.

Australia has been assisting immigrants by paying all but £10 of their boat fare, letting them live in hostels until they are settled and helping them find jobs. Now this arrangement will apply only to immigrants who have relatives or friends in Australia who will vouch for them.

The new quota will allow 20,000 to come from the United Kingdom, 10,000 to come unassisted from Europe and another 10,000 from Europe assisted by cheap passages.

TWUA Defeats AFL Rival In Two Ontario Plants

The last major contest in the struggle between the Textile Workers Union of America (CCL-CIO) and the United Textile Workers of America (AFL-TLC) in Ontario ended January 28 in victory for the CIO.

On that date the Ontario Labour Relations Board dismissed an AFL application for certification at Cosmos Imperial Mills in Hamilton.

Earlier in the month, on January 9, the TWUA defeated the UTWA in an election at Grout Ltd., St. Catharines, Ont., by a vote of 73 to 55.

This was a repeat election. An earlier election several weeks before, in which the AFL was the victor by one vote, was protested by the TWUA on grounds of irregular activities by AFL officials during the conduct of the election. An OLRB investigation upheld the charges and the Board ordered a new election.

Old Age Assistance Recipients Increase

The number of persons receiving old age assistance in Canada increased from 81,016 at September 30, 1952, to 84,776 at December 31, 1952.

The federal Government's contribution under the federal-provincial scheme totalled $4,800,505.38 for the quarter ended December 31, 1952, compared with $4,721,683.31 in the preceding quarter. Since the inception of the Act, the federal Government has contributed $16,502,085.39.

During the quarter, 3,935 persons receiving old age assistance were transferred to the administration of The Old Age Security Act as compared with 3,334 in the preceding quarter. Since the inception of the Act, 9,667 recipients have been transferred.

As at December 31, 1952, the average monthly assistance in the provinces paying a maximum of $40 a month ranged from $33.50 to $37.97, except for one province where the average was $23.51. In Newfoundland, which pays a maximum of $30 a month, the average was $29.04.

Nfld. Vocational School Graduates 114 Students

During the school year 1951-52, a total of 140 students were enrolled in regular trade courses at the St. John's, Newfoundland, Vocational Training Institute. Of these, 114 received certificates in automotive mechanics, diesel mechanics, carpentry, electrical work, metal machinery, bricklaying, plumbing and wood machining.

Many students from outlying areas of the province attended the six-to-nine-month courses. All of the students in plumbing and bricklaying were placed in employment.

70169—3

Fewer Blind Allowances Paid at End of 1952

The number of blind persons in Canada receiving allowances under the Blind Persons Act decreased from 8,313 at September 30, 1952, to 8,299 at December 31, 1952.

The federal Government's contributions under the federal-provincial scheme totalled $740,413.01 for the quarter ended December 31, 1952, compared with $758,206.10 in the preceding quarter. Since the inception of the Act, the federal Government has contributed $2,964,845.09.

During the quarter, 120 persons receiving blind allowances were transferred to the administration of The Old Age Security Act as compared with 99 in the preceding quarter. Since the inception of the Act, 431 recipients have been transferred.

As at December 31, 1952, the average monthly allowance in the provinces ranged from $37.98 to $39.50. In all provinces the maximum allowance paid was $40 a month.

Que. Industrial Accidents Up 1.3 Per Cent in 1952

The number of claims for workmen's compensation in Quebec in 1952 was 1·3 per cent higher than in 1951, it has been announced by E. C. Kirkpatrick, President, Province of Quebec Accident Prevention Association. A total of 97,177 claims was filed during the year, he said.

While final industrial accident costs have not been compiled, they are expected to pass the $15,000,000 mark.

This is the largest number of accident claims filed in one year since the inception of the Workmen's Compensation Act in 1931, Mr. Kirkpatrick noted.

1951 Official Figures

The number of industrial accidents reported to the Quebec Workmen's Compensation Commission rose from 86,246 in 1950 to 95,930 in 1951, according to the provincial *Statistical Year Book* published recently.

During 1951 the sum of $7,129,325.72 was allotted in compensation to injured workers or their dependents. A reserve fund of $8,197,654.33 was created for claims awaiting decision.

In 1950 compensation paid out was $6,864,931.38 and the reserve fund amounted to $8,784,226.54.

These figures refer to those industries where employers contribute either a percentage of payrolls or a specific sum to the fund established under the Workmen's Compensation Act and not to those industries in which employers pay directly to the accident victim or his dependents the compensation determined by the Commission.

Employees Compensation Branch Issues Report

During the fiscal year 1951-52, the Employees Compensation Branch of the federal Department of Labour handled 12,857 claims for accidents and occupational diseases in the public service of Canada and made disbursements totalling $1,208,514, according to George G. Greene, Director.

The number of claims was largest in Ontario (4,528) and smallest in Prince Edward Island (48). Disbursements in these two provinces were $428,753 and $6,010 respectively. Quebec and British Columbia had a few more than 2,000 claims each and Nova Scotia and Alberta about 1,100 each. No other province had more than 700.

The Department of National Defence submitted 4,790 claims. The Post Office was next with 2,229. All other departments had fewer than 1,000 each.

Of the 12,857 claims on which disbursements were made, 4,192 were for compensation and medical aid, 8,529 for medical aid only, and 39 for new pensions.

N.B. Labour Council Marks 50th Anniversary

The Saint John Trades and Labour Council (TLC) last month celebrated the 50th anniversary of its formation.

Hon. Milton F. Gregg, Minister of Labour, was one of the speakers at the commemoration banquet. Others who spoke were Percy R. Bengough, President of the Trades and Labour Congress of Canada; Hon. D. D. Patterson, New Brunswick's Secretary-Treasurer; Hon. Arthur E. Skalling, New Brunswick Minister of Labour; Mayor E. W. Patterson of Saint John; and John N. Flood, President of the Canadian Construction Association.

Mr. Gregg spoke of early trade union history in Saint John.

* * *

Another 50th anniversary celebration last month was that of Local 25, Bricklayers, Masons and Plasterers' International Union of America (AFL-TLC), Fort William. Chief speaker at the commemoration banquet was John McLeod, the union's Vice-President in Canada.

N.B. Cabinet Ratifies Agreement with IBEW

The first collective agreement between a New Brunswick government department and an international union has been signed.

The Chairman of the New Brunswick Electric Power Commission, Hon. E. J. Fournier, last month recommended that the provincial Cabinet approve a one-year contract between the Commission and its workers in seven locals of the International Brotherhood of Electrical Workers (AFL-TLC). Cabinet approval was given February 19.

This is the issue on which the previous Government of the province decided to call last year's election.

The contract contains a no-strike clause and reduces to a 40-hour work week with no reduction in take-home pay.

Other provisions in the agreement are a union shop, by which all employees covered by the contract must join the union within six months; voluntary revocable check-off of union dues; sick leave and vacation benefits.

The contract is subject to renewal every year. If a dispute over renewal can not be settled by negotiation, it will be given to an arbitration committee.

Name Part-time Members Of B.C. Labour Board

The four part-time members of British Columbia's reconstructed Labour Relations Board have been named by Labour Minister Lyle Wicks. They are George Home, Secretary-Treasurer of the British Columbia Federation of Labour (CCL) and Jim Barton, President of the British Columbia Trade Union Congress (TLC), representing labour, and Fred W. Smelts and Maj.-Gen. C. A. P. Murison, representing employer associations. The permanent chairman of the board is D'Arcy Baldwin.

Both labour unions and employer associations in the province have urged that the Board be continued on a full-time basis.

In a brief presented recently to the provincial Government, five groups of British Columbia employers, representing 75 per cent of all industry in the province, said the part-time Labour Relations Board would not work and that the full-time board was cheap insurance against vast sums lost in strikes.

"It is our view," the brief stated, "that it is all the more imperative there should immediately be available at all times a strong and impartial board to administer the ICA Act."

In its annual brief to the provincial Government at the end of last year, the Trades and Labour Congress emphasized its desire for retention of a full-time Board and urged that no change be made in it.

The British Columbia Federation of Labour (CCL) took a similar stand at its convention in January.

International Department Established by CCL

The Canadian Congress of Labour last month established an International Department and named as its Director a Canadian recently returned from more than a year's service with the International Confederation of Free Trade Unions in Brussels.

The CCL is the first Canadian labour organization to set up such a department.

Appointed Director of the new department is Martin Levinson of Hamilton, Ont.

"One of the functions of our new department will be to ascertain information relating to international policies of concern to Canadian labour so that we may intelligently express our views on such subjects," said CCL Secretary-Treasurer Donald MacDonald when announcing its establishment. Another major task of the new department will be to seek closer relationships with other *bona fide* trade union movements throughout the world.

A graduate from McMaster University and a veteran of the Royal Canadian Navy, Mr. Levinson has been Research and Educational Director for the International Woodworkers of America (CIO-CCL) in Eastern Canada and Chief of Service in the ICFTU organizational department.

Union Shop Pact Signed By More U.S. Railroads

More railroads in the western United States last month signed the standard union shop contract with 17 non-operating unions first negotiated with lines in the East (L.G., Jan., p. 19; Feb., p. 187). In addition, the Pullman Company signed a union shop pact covering about 18,000 workers in all parts of the country.

Among the major lines recently signing the agreement were the Rock Island, on which some 25,000 employees are affected; the Western Pacific (8,000 employees); the Minneapolis & St. Louis (5,000); the Elgin, Joliet & Eastern (3,000); the Toledo, Peoria & Western (4,000); and the Chicago & Eastern Illinois (2,500).

70169—3½

Director of Organization Appointed by CCL

The Canadian Congress of Labour has appointed a Director of Organization. He is Joe MacKenzie of Toronto, at one time Canadian Director of the United Rubber, Cork, Linoleum and Plastic Workers of America (CIO-CCL).

Until Mr. MacKenzie's appointment, announced last month, the CCL's organizational efforts were directed by Secretary-Treasurer Donald MacDonald.

5-Year Pact Ruled Bar To Representation Vote

Unions in the United States have been encouraged to make long-term contracts similar to those developed in the auto industry in 1950 by a recent decision of the National Labour Relations Board.

The Board ruled unanimously that five-year collective bargaining agreements in the automobile and farm equipment manufacturing industries could be used to prevent union representation elections for the duration of the contract.

The action of the Board upheld the contention of two employers and three unions in the automobile industry that contracts should operate as restrictions on elections for their full term. Usually, rival unions can try to take over a plant every year through representation elections.

The members of the Board believed that stability of labour relations could better be served by holding as a bar collective bargaining agreements even for five years' duration when a substantial part of the industry concerned is covered by contracts with similar terms.

Expansion in Petroleum Creates 2,000 New Jobs

About 2,000 permanent new jobs have been created in the petroleum products industry since 1948 through the construction or expansion of about 25 oil refineries.

This growth, following on the discovery of the Leduc oil fields in 1947, was reflected in an increase in the employment index for the petroleum products industry from 149.3 in 1949 (1939=100) to 172.5 in 1951.

Labour Relations Official Replaced in Quebec

Paul E. Bernier, Secretary of the Quebec Labour Relations Commission, was dismissed December 15 on the recommendation of the provincial Civil Service Commission.

Mr. Bernier had been Secretary of the Commission since its establishment in 1944.

Gérard Vaillancourt, a Quebec lawyer, has been named to succeed him.

Extracts from Hansard of Interest to Labour

Proposal to Increase Family Allowances

January 19

Mr. H. R. Argue (Assiniboia) moved:

That, in the opinion of this House, the Government should give consideration to the advisability of introducing legislation increasing the amounts paid under the Family Allowances Act to the extent necessary to compensate for the increase in the cost of living since the said Act was first enacted.

He said: . . .I believe it is in the interest of Canada both at this time and in future years to see increased family allowances and in this way help to provide better food, better clothing, better educational opportunities and better medical care for growing Canadian children. . .

An increase in the family allowance at this time is an investment in the future. It will mean that our children, who reach manhood and womanhood in better health, will have the opportunity of receiving better education. It will mean that when they take their places as adults in our national life they will make a greater contribution to the production of our country because of their improved health standards and better educational qualifications. This increase in our national production will bring with it an improvement in our standard of living. . .

Not only will an increase in family allowances contribute to a greater production of wealth in Canada in years to come, but if this country in the future is again called upon to face a national emergency such as we had between 1939 and 1945, I believe our young citizens would be better able to come to the defence of our way of life.

When I introduced the resolution a year ago the Minister of National Health and Welfare said that perhaps I had missed a

more important point, that I should have been advocating that the age limit be increased from 16 to 18 years. All I say to the Minister on that point is that if the Government thinks that is a better way to improve family allowances, than by increasing by some 60 per cent the basic rates, as I now advocate, I shall be perfectly happy to accept such an amendment, and shall agree that such action would constitute a reasonable improvement in family allowances for the time being.

I do feel however it is not right or fair for any government in any year to pass a social security measure and then, in years following, by permitting a condition of inflation to prevail, take away a large part of the social security effected by the measure.

The increase in the cost of living has reduced by at least 40 per cent the effectiveness of amounts received for family allowances since August 1944. If we are to restore to the family allowance cheque the 1945 value, then the present dollar value of those cheques needs to be increased by 60 per cent. This would increase minimum payments from $5 to $8 per child per month, and maximum payments from $8 to $13 per child per month.

The cost-of-living index in August 1944, was 118·9, while in November 1952, it had risen to 184·8, or an increase in that period of time of more than 55 per cent. If one looks at the main items on which family allowance payments are spent one finds that while the clothing index was 121·5 in August 1944, in November of last year it stood at 205·5, or an increase of 69 per cent. In that same period of time the food index increased from 131·5 to 229, or an increase of 74 per cent.

I say that in view of these increases of 69 and 74 per cent on clothing and food, respectively, the suggestion I make that family allowance payments should now be increased to the extent of 60 per cent is a modest one, and something the Government should implement immediately.

If one looks over some of the important food items he will find that the increase in cost is considerably greater than the general cost-of-living increase. For example, we realize that milk is the most important single item of diet in the life of every child, and we find that the price of milk has increased from 10·4 cents a quart in January 1944, to 21·1 cents in October 1952. This increase was brought about mainly by general inflation, and a general increase in the cost of production and distribution. But in part, the increase was brought about by the fact that the Government removed the subsidy that at one time it paid on milk.

The price of stewing beef, one of the cheaper cuts of meat, increased from 22·7 cents per pound in January of 1944 to 59·5 cents in October 1952. Meat is a high protein food which is one of the essentials in the diet of children. I am sure that any medical man will tell you that it is necessary to good health. As I have pointed out, the cost of stewing beef increased by some 150 per cent.

The general effect of the increase in the cost of living has been a decrease in the consumption of milk. In 1946 the consumption of milk in Canada was some 60 million hundredweight; the consumption of milk in 1951 had decreased to 58,650,000 hundredweight, or approximately two per cent. From 1941 to 1951 the population of Canada increased 18·6 per cent. In other words, in the period from 1944 to 1952, although the consumption of milk was going down, on the other hand our population was increasing rapidly. From the figures that I have already given I estimate that from 1944 to 1952 the per capita consumption of milk in Canada went down 10 per cent.

I think part of the reason for the reduction in the consumption of milk can be attributed to the fact that the family allowance cheque was steadily losing its purchasing power. There is no one in this House who can say that Canada cannot produce all the milk that our people can consume if they have the finances with which to purchase it. . . I believe that an increase in family allowances at this time would be followed by an increase in the consumption of milk and that in turn would react to the benefit of our dairy industry...

The present family allowance cheque is pretty small. Five dollars per month will not buy many quarts of milk. Five dollars per month will not contribute very much toward the cost of providing for a new child coming into the home. During the debate last year I quoted an article from *Life* magazine which stated that in New York city it cost approximately $400 to provide all the things necessary for the well being of a newly-born child. The article went on to state that the various items of equipment, the utensils and clothing necessary, might be purchased for as low as $275, but that was considered to be the rock bottom price. It would take a great many family allowance cheques to pay the cost of things necessary to provide for the care of a newly-born child even at that lower price. . .

While our defence expenditures may level off or decrease I hope for a continued increase in the real production of wealth in this country. In recent years our wealth has been increasing at the rate of between four and five per cent annually. That annual increase of between four and five per cent in our gross national production is sufficient to cover all our social security payments including family allowances, old age and blind pensions and those made under other measures. . .

In advocating an increase in family allowances I would point out that the Minister of Fisheries (Mr. Sinclair), formerly Parliamentary Assistant to the Minister of Finance, in a well-delivered speech in this House before Christmas argued that social security payments were transfer payments, that they were not for the provision of materials and labour for the use of the government. In other words, an increase in family allowances does not increase the burden upon the Canadian people; an increase in family allowances merely transfers purchasing power from the more well-to-do to those less well-to-do, in this instance to Canadian parents. . .

The question needs to be answered as to whether Canada can afford such an increase. I believe we can. I admit it is a considerable amount of money but I believe it can be paid, as I have said, out of our increased wealth production. I estimate that a 60-per-cent increase in the family allowance would cost the national treasury an additional $192 million in any one year. Our gross national production for the year ended March 31, 1952, was some $21·2 billion. The 60-per-cent increase in the family allowance that I am advocating represents less than one per cent of the gross national production. Let us take a look at what has been happening to the share of the gross national production that is being used for family allowances. In the fiscal year 1946-47 $245 million was spent on family allowances. Our national wealth production in that year was some $12 billion. In other words, two per cent was paid out of our production in 1946-47 for the purpose of family allowances.

For the year ended March 31, 1952, the amount paid for family allowances had increased to $320 million but our national production had increased to $21·2 billion, and family allowances in 1951-52 represented only 1½ per cent of our national production compared with two per cent in 1946-47. The suggestion I make is that the percentage of our national production that is used to provide family allowance payments should not be allowed to decrease, and most certainly not to the extent of 25 per cent over a five-year period. . .

Mr. F. H. Larson (Kindersley): I could not take very serious issue with the Hon. Member when he feels that family allowances should be continued and increased as we can pay for them. He has made an impassioned appeal to many classes in this country including labour, the textile industry and the dairy industry. There is only one particular class to whom he did not make a very serious appeal, and that is the taxpayer. It is not the man who drives the Cadillac or the lady who wears the mink coat who pays the largest amount of taxes in this country, but the ordinary person like the Hon. Member and myself. We pay indirect taxes on practically everything we use. Most of the revenue of this country comes from that source. . .

I feel that family allowances are very important, and I feel that as soon as we can collect enough money from the taxpayers to increase those allowances we should do so. But I believe that our one great aim should be to see that everyone in this country has an opportunity to get a job that will pay enough money to keep a family. Then our family allowances program, as it goes forward, could supplement the income that the father earned. As I say, I am greatly opposed to the measure the Hon. Member has brought forward. I am in favour of family allowances, because I certainly support wholeheartedly the Government that conceived them, introduced them and is paying them now. As soon as it is felt that we can afford to increase those allowances, then I shall be in favour of that. . .

Mr. Ray Thomas (Wetaskiwin): Mr. Speaker, I am going to take about two minutes to speak in support of the motion . . . I believe, however, that there are one or two other considerations which the Government should take into account at the present time. The first is that, in my opinion, a larger income tax exemption should be allowed for those who are receiving family allowance. At the present time the exemption is pretty much of a joke. But more important than that point is this one. Before any increase is given, I believe that consideration should first be given to the extension of the age limit beyond 16 for those children who are carrying on with their education. In many cases, among the lower income families, we find that the children have to quit school after 16. As a result of that fact their productive capacity in later life is restricted.

As I say, we agree that the family allowance is inadequate at the present time and we should like to see an increase in it. But at the same time I think that consideration should first be given to those children over the age of 16 who wish to continue their education. What the age limit would be is something I would leave to the Minister of National Health and Welfare (Mr. Martin). But in many cases the children are forced to quit school immediately upon reaching the age of 16 because the family income just does not allow them to go on...

Mr. A. F. Macdonald (Edmonton East): I hope that the Minister of Health and Welfare (Mr. Martin) will use his usual good judgment... I would ask him to make sure that it is within our ability at the present time to pay another $192 million a year to increase by 60 per cent the family allowance figure set out by the Hon. Member who proposed the resolution.

This is one form of social security I wish to see retained on the statute books; and if it is ever going to be increased I want it to be increased to an amount we can sustain for all time to come.

I would hope that when the Minister speaks he would take into consideration the amount of money involved, and that he would consider the resolution and, in the light of the amount of money available from the taxpayers of this country, consider the possibility of supporting an increase in this form of social legislation.

Hon. Paul Martin (Minister of National Health and Welfare): . . .No one has suggested, and I am sure no one will suggest, that the Government takes issue with the principle of the suggestion involved. Certainly to oppose this resolution, as I shall, for the reasons I shall give, will not justify anyone in saying that the administration or the supporters of the Government in the House do not believe in the principle of family allowances. . .

The proposal put forward by my hon. friend is naturally one that captures and encourages the support of anyone who wants to see our children receive increasing opportunities. There is no one who could legitimately oppose that measure. But it is one thing to propose, and then it is another thing to be able to find responsible and practicable means of carrying out that proposal. And I suggest with vigour and sincerity to the Hon. Member who proposed this resolution that his suggestion is not practicable. . .

The significant thing, in answering the suggestion that the Government should commit the people of Canada to an expenditure of $192 million in addition to what has already been spent for family allowances, is that it is important to note the history of the administration of the measure. This would include not only its present total cost, but also all those related factors which would enable a responsible man to come to a conclusion as to whether or not at this time, in the light of overriding obligations in regard to health, or other obligations of the Government, this is the moment to embark upon such a proposal.

We have paid out in nine years in family allowances some $2,131 million. That is the amount up to December 31, 1952. The expenditure on family allowances for the fiscal year 1951-52 is to be found at pages 140 and 141 of the report of the Department of National Health and Welfare, which I tabled last Thursday. That report indicates that the estimated cost of family allowance payments in the fiscal year 1951-52 will total $320,880,854.

That in itself represents a substantial sum of money. There is only one source from which that money can come—indeed, there is only one source from which any expenditure of this or any other government can come—and that is from the hard work of the people of the country.

That fact cannot be emphasized too often; because it is one thing to suggest that there should be more social services —and I take second place to no Hon. Member in pressing for that objective—but, at the same time, if one wants to be responsible in his protagonism of legitimate social reform, there should constantly be brought home to the people a reminder as to the only source of all government expenditures.

May I say . . . that the question before us is whether or not, in the face of the expenditure of $320 million for family allowances, apart altogether from what other expenditures are maintained in the field of health and welfare on federal account, we can honourably impose upon the people of Canada at this time a further expenditure of $190 million in connection with this one particular matter.

When you add to that the fact that we are spending over $300 million on old age security payments, let alone the other expenditures which I am going to detail before I resume my seat, I question very much whether the people of Canada would agree that this is the moment to embark upon this particular proposal. Not only do I question that; I would say to the hon. gentleman that my correspondence and contacts as Minister of National Health and

Welfare lead me to suggest that if there is any reform in connection with family allowances that is being put forward with greater vigour than any other, it is the suggestion made by the Hon. Member for Wetaskiwin (Mr. Thomas), who said that he would prefer to see the age qualification increased from 16 years to at least 18 years. I would certainly agree with him that there seems to be greater justification and greater demand for that kind of reform than there is for the reform put forward in the motion now before us. . .

I have given the estimated expenditures in family allowances for the fiscal year 1951-52. The figures for the calendar year 1952 are very interesting indeed. They show a total of $330,827,545, with an average monthly payment from January 1952, to October 1952, of roughly $27 million. November and December of 1952 show an increase in family allowance payments, with the result that the average for those two months was a little over $28 million. In January 1952 we paid out in family allowances $27,400,000 to 1,956,183 families representing 4,496,739 children. In December, when the average monthly payment rose from $27 million to $28 million, payments were made to 2,021,745 families representing 4,668,987 children. . .

This Act was intended to benefit the great majority of the people. It was predicated upon the fact that 19 per cent of the working population of Canada is responsible for almost 84 per cent of the children of Canada up to 16 years of age. It was predicated upon the fact that our wage system does not take into account the obligations of a parent with one or more children as compared with those of an employee who is not married. It was done in a way that no other country in the world has succeeded in doing, without in any way encouraging a disposition to depress the wage scale of the wage earners of the country. At first labour was a little concerned about this measure, and not unnaturally so. They had seen the experience of France and at least 20 other countries of the world where family allowance schemes were in existence and where their maintenance had been used, not to add to the daily receipt of income by the wage earner but as a means of depressing wages, as a means of substituting payments by the state for the fact that the employer had failed to carry out his obligation in terms of economic return to his employees.

I . . . make no apology for the attitude I am taking with regard to this proposal. In fact in taking the attitude that I do, I feel I am strengthening the structure upon which the family allowance measure in this country is based. I want to see it preserved. I do not want steps taken now which might result later in a serious reduction in this or in any other social welfare measure. That has happened in Great Britain; it is happening today in France. That has happened in Belgium and in at least four other European countries. It has happened in at least three Latin-American countries that I know of.

The estimate for the fiscal year 1953-54 for family allowance payments is $347 million. We estimate that the increase on the basis of the present program is from $12 million to $15 million annually. . .

It is interesting to note the percentage of net national income spent on family allowances in the four countries, including Canada. It will be seen that on this basis of comparison Canada is ahead of Australia and Great Britain, our percentage being 1·86, Australia's 1·44 and Great Britain's ·55, while New Zealand is higher than Canada, being 2·62. But taking the relation of family allowances to other social security expenditures—and this is something we must do when we consider a proposal of the magnitude put forward by the Hon. Member whose motion we are now discussing—in Canada for 1951-52 family allowances represented 25·5 per cent of all social security expenditures. This is a larger proportion than in any of the three countries I have mentioned. It is larger than Australia whose percentage is 23·3, than New Zealand whose percentage is 25·5, and than Great Britain whose percentage is 4·5.

Therefore if we were to adopt the proposal the result would be that in relation to other social security benefits we in Canada would be spending much more on family allowances than on our other social security measures. What one has to do—because there is a limit to the availability of money for these purposes—is to consider the effect of any particular proposal on existing measures or upon other proposals or projects that the administration may have in mind. . .

It seems to me we have to keep in mind three important considerations. First, of all, as the Hon. Member for Skeena (Mr. Applewhaite) mentioned, family allowances, or any other social benefits, were never intended to cover the complete cost of child maintenance. That is what any social benefit is, a contribution toward some form of maintenance. It cannot be anything else; and certainly if family allowances

were intended to provide for full maintenance we would have to acknowledge at once that we had changed the character of our economic and social system. The second point to consider is that, without any increase in the amounts of benefit family allowances this year will cost us $332 million and some odd thousand. Third, each year there is an increase in the cost of this measure by some $12 million.

Now, the House will no doubt agree that, in the face of the fact that we are engaged in a commitment to spend over $2 billion for national defence, for preparations to preserve our way of life, together with other tremendous but I think responsible expenditures in the field of social welfare, and having in mind the universal demand that is made by hon. gentlemen opposite for a cut in taxation, it is hardly responsible at this time, in respect of this one measure, to make the proposal that has been made. If one were to calculate the suggestions for expenditures made on the other side, and place those alongside the charges that are being made against this Government, I am sure that would be the greatest demonstration of lack of logic that the political life of Canada has ever witnessed. . .

I have indicated that this year we will spend $332 million in family allowances. When you consider the huge amount involved, it would not be unnatural to expect that we would be spending, by way of total administration costs, much more than is being spent. Last year the Department of National Health and Welfare spent in the administration of this gigantic program less than $2 million, specifically $1,858,000; Treasury spent $2,627,335; Public Works, which looks after our ten regional offices, spent $234,758. The whole administration cost of family allowances, administered by the federal Government, was $4,720,093. I doubt if you could find a better example of careful accounting and careful expenditure. . .

I feel, Mr. Speaker, that this very dry recital of the facts from our point of view will be a conclusive answer to the hon. gentleman who is proposing this resolution. It is not a denial of the validity of the principle. We believe in family allowances within our capacity and to the extent that we are able to meet other obligations. This suggestion has been made from other quarters of the House as well, and we should like to be able to accede to it at this time. For the reasons I have given, I believe we should not accede to it. . . I move the adjournment of the debate.

Mr. Deputy Speaker: Mr. Martin moves, seconded by Mr. Fournier (Hull) that this debate be now adjourned.

The House divided on the motion, which was agreed to on the following division: Yeas, 91; Nays, 40.

Voluntary Revocable Check-off

January 20

The House resumed, from Tuesday, January 13, consideration of the motion of Mr. Knowles for the second reading of Bill No. 2, to amend the Industrial Relations and Disputes Investigation Act (voluntary revocable check-off).

Mr. Paul E. Coté (Parliamentary Assistant to the Minister of Labour): When I adjourned the debate last Tuesday I was examining certain views that had been expressed in a previous debate by some of the main supporters of the amendment which is now before the House. I had occasion more particularly to refer to the debate on the Maintenance of Railway Operation Act of 1950, and to the remarks of both the leader of my hon. friend, the Hon. Member for Rosetown-Biggar (Mr. Coldwell) and the Hon. Member for Vancouver East (Mr. MacInnis). I also referred to statements made by the Hon. Member for Spadina (Mr. Croll), and at the time of the adjournment I still had one or two statements by the Hon. Member for Spadina that I wished to put on the record.

All those quotations which I have offered for the consideration of the House were intended at that time—and I use them in this debate for the same purpose—to indicate how important it is for the welfare of the Canadian worker and for the peaceful development of our industry as a whole that the utmost freedom should be left to collective bargaining between the two partners in industry.

During the debate on the Maintenance of Railway Operation Act of two years ago, the Hon. Member for Spadina placed a great deal of importance on this basic principle of free collective bargaining in industry. I have quoted a few sentences from his remarks in this regard, and I wish to add this one which will be found on page 41 of *Hansard* for the fall session of 1950:—

> I believe that compulsory arbitration means the death of collective bargaining. It is all very well to say that we shall apply this principle only in this case, but we have done damage to a fundamental principle of freedom.

In my several participations in debates on this matter of the voluntary revocable

check-off, I have always sustained that particular point. Should this bill be passed and the Industrial Relations and Disputes Investigation Act be amended to make it compulsory to have the voluntary revocable check-off, we would, using the words of the Hon. Member for Spadina, be doing damage to a fundamental principle of freedom.

I should like to quote from the speech that the mover of this amendment made in the same debate in the fall of 1950, and which I submit is most relevant to the point. It will be found at page 41 of *Hansard* of that session:—

> I share the view that has just been expressed by the Hon. Member for Spadina, and which was also put forward by my leader and by the Member for Vancouver East, that it is in the public interest also, indeed that it is of primary importance, that there be no interference with the principle of free collective bargaining.

The Hon. Member for Cape Breton South (Mr. Gillis) also participated in that debate and expounded his views on the basic principle of industrial relations in this country and on free collective bargaining. He had this to say, as reported at page 48 of *Hansard:*—

> I am convinced that you cannot write a trade-union agreement on the floor of the House of Commons. The former Minister of Labour made that statement many times and I agreed; you cannot do it.
>
> We are setting a precedent that will be taken as a pattern by industry in this country if and when the bargaining gets a little tough. The simple and easy thing to do then will be to break off, throw the matter into the lap of the Government and have a bill passed.

On page 49 the Hon. Member had this to say:—

> I believe we did a good job of writing a national labour code, but do not forget that this bill automatically wipes out many provisions of that code as it applies to this dispute.

The Hon. Member for York West (Mr. Adamson) also participated in the debate, and made an interesting contribution which I should like to place on record, when he said:—

> I object as strenuously as does any other Member of this House to compulsion of any sort in labour-management disputes or in anything that has to do with collective bargaining.

While I cannot recall definitely the stand taken by the Hon. Member for York West on measures of this kind when they were presented to the House in years past, I wish to stress that all the other Hon. Members to whom I have referred have approved the principle of this amending bill, and by so doing have taken a position which is in direct conflict with the statements made by them during the debate on the Maintenance of Railway Operation Act in 1950.

If on the one hand Parliament should preserve by all possible means the freedom of action of both management and labour when they get together and attempt in good faith to reach common agreement, then the amending bill proposed by the Hon. Member for Winnipeg North Centre (Mr. Knowles) becomes quite objectionable. It may not mean very much in itself, because what it proposes to introduce is, after all, only the slightest possible measure of union security, described in the amending bill as the voluntary revocable check-off. But once the principle is applied of interference by Parliament in matters which have thus far been left with labour and management to discuss, and upon which they can surely agree, there will be no limit to the powers of Parliament in future years for further interference, in circumstances which might be much more important than those surrounding the voluntary revocable check-off.

While I have not the exact reference before me, I do recollect that on one occasion in the past, when the Hon. Member for Vancouver East (Mr. MacInnis) was discussing a similar bill, I asked him if the bill were passed whether he and his party would be satisfied to leave it at that, and give a guarantee that it would not be considered as a precedent; that they would not come here year after year asking for more and more interference by Parliament in matters of collective bargaining. He said, "No, that is not the end; that is just the beginning". I can vouch for his reply on that occasion. So, that means a policy of opening the door wider and wider as the years go by, and some day bringing Parliament to a position of dictating by statute what the wages, hours of work and conditions of work will be in any plant or industry coming under the jurisdiction of Parliament. . .

I have quoted several statements from the late Hon. Humphrey Mitchell, but, after having placed on record the observations of those who have supported bills of this kind in the past, I should like to quote one further sentence from the late Mr. Mitchell, so that Hon. Members may

compare his views with those which the supporters of this bill have expressed on another occasion. This is what Mr. Mitchell said:—

Legislation of this nature will fail in its fundamental objective if it introduces features of a coercive character which only result in driving employers and employees further apart. That would make it more difficult for them to establish those friendly relations of goodwill and co-operation which are so necessary.

Some hon. Members: Six o'clock.

On motion of Mr. Coté (Verdun-La Salle) the debate was adjourned.

January 23

The House resumed from Tuesday, January 20, consideration of the motion of Mr. Knowles for the second reading of Bill No. 2, to amend the Industrial Relations and Disputes Investigation Act (voluntary revocable check-off).

Mr. Paul E. Coté (Parliamentary Assistant to the Minister of Labour): . . .in the Act which this bill attempts to amend prohibitions have been enacted; duties and privileges have been determined for both sides, that of management and that of labour. But in opposing the bill before the House my thesis is precisely that in the Act Parliament has kept away from a field which has always been the exclusive privilege of management and labour, namely that of collective bargaining. Since matters of check-off and matters of union security generally have, by tradition, been reserved as matters appropriate for collective bargaining I contended, as I still contend, that Parliament should not interfere.

If Parliament enacts the bill which we are now considering, we will be setting a precedent of interference by Parliament in the field of collective bargaining. The precedent having been set, there is no reason why, on other occasions in years to come, Parliament should not be called upon to entertain other amendments which would bring the state further and further on in that field of collective bargaining.

The two groups, those favouring the passing of this bill and those opposing it, are anxious to see the trade unions of this country gain strength, prestige and influence throughout the years to come. Rightly or wrongly—and there are differences of opinion—this question of check-off is considered as a procedure for the collecting of union dues which tends to strengthen the position of a union in a plant.

I agree with the principle of the check-off of union dues, as do those who are sponsoring the bill. What differentiates the two attitudes in this matter is that we on this side of the House feel that it is a matter which should be left to labour and management to discuss and negotiate between themselves, while my friends opposite claim at this time that this is a matter that should be enforced by statutory action.

In the past my hon. friends opposite had a stronger argument in support of their contention on this particular matter, when they referred to the situation in the Canadian railways and deplored the attitude of the railway companies, who had opposed the acceptance of any measure of check-off. The companies seemed strongly determined not to change their attitude. As a matter of fact the Hon. Member for Winnipeg North Centre did refer to the brief which the Railway Association had circulated among the membership of this House and outside of this House at the time the companies raised several objections to any legislation in the nature of the bill which is now being considered.

If I may, I should like to emphasize that their main objections were the following. The first was that the introduction as a statutory obligation upon all employers of what is essentially a matter of bargaining is fundamentally unsound. Their second objection was that the extent of the burden of the enforced check-off upon separate industries will vary greatly, and that it will be very serious upon some of them, for instance, on the major railway companies. Their third objection was that the major railway companies deal with 27 different organizations representing over 150,000 employees, and from any or all of such organizations requests for check-offs might be received. The fourth objection was that these railway companies have employees throughout the country from coast to coast, many of whom are located at isolated points, but of necessity the accounting and payroll procedures are centralized at relatively few points, substantially distant from many of the places of employment. Another objection was that this centralized accounting procedure of necessity requires the handling of a large volume of work in a limited period of time, and there is a period of only two weeks from the close of a pay period until pay cheques must be available for delivery to the employees, including all the time the payrolls and pay cheques are in transit and the time involved in connection with auditing payrolls and preparing pay cheques. And finally they objected on the basis that there are differences in the amounts of the dues collected by the

various unions. In some cases, the union dues payable are dependent upon minimum monthly earnings.

I do not intend to speak at any great length on the recent agreement which was concluded between the brotherhoods representing the non-operating trades of the railway companies last December 19, . . . nevertheless I wish to refer to the agreement which was concluded on December 19 in order to show that through negotiation, and in spite of the seven or eight serious objections which the railway companies had interposed throughout the years in their negotiations with labour organizations in order to avoid any bargaining or any conclusion of an agreement on the matter of the check-off, in spite of all that there was included in the agreement of last December, to which I have referred, a provision for the check-off of union dues, which my hon. friend who introduced this bill has read in extenso, and to which I should also like to quote. It is found on page 43 of the report of the conciliation board, and reads as follows:—

> With regard to the check-off, the board is of opinion that, as every employee now has the same right as any other creditor to assign the whole or any part of any debt, present or future owing to him, the proposed clause is one that should properly form part of the new agreements.

As a matter of fact, in the language in which this recommendation was set out in the agreement, and I can say my hon. friend recognizes, I think, that the provision goes beyond the provision of the bill we are now considering.

If through the usual bargaining process the brotherhoods or organized labour generally have succeeded in concluding an agreement on a matter such as the check-off, which was subject to such strong irreductible opposition on the part of management in years gone by, I cannot see that today the bill now before us can be supported even to the extent to which it received support in the last few years. I do not claim, and I have never contended in the past, that at no time in the future would it not be possible to consider the propriety of any measure such as the one submitted by the Hon. Member for Winnipeg North Centre, but I claim that any such measure should not be introduced in this House before prior consultation with management and labour organizations in this country, and without securing their approval on the basic principle of this or any like measure.

At the time the late Humphrey Mitchell introduced the Industrial Relations and Disputes Investigation Act, either in the House or in committee he expressed the view to the Hon. Member for Vancouver East or the Hon. Member for Cape Breton South (Mr. Gillis), that it would be premature and perhaps not right to attempt to revise or to alter the basic principles of the Act until some experience had been gained of its workings. To a direct question he replied that in his estimation that period should be at least five years. The Act came into force in September 1948, and that five-year period will be up next fall.

The information I have is that the Act is functioning well, and that the Canada Labour Relations Board has been gathering important and useful jurisprudence on matters of certification of unions and so on. I should think that the material obtained from the administration of the Act, the experience gained by officers of the Department, by leaders of trade unions and of management organizations would be such that we might consider at the next session of this Parliament, or at the conclusion of the five-year period I have mentioned, examining the old Act in the light of that experience. I think that would be a proper procedure to follow. I do not think it would be wise to attempt to amend such an important Act such as this piecemeal. We are being asked through this bill sponsored by the Hon. Member for Winnipeg North Centre to do away with one of the basic principles of the Act, the absolute freedom of collective bargaining to which management and labour are committed. . .

I should like to ask a question of the Hon. Member for Vancouver East. I ask him in all sincerity whether he would not approve of the suggestion that we should not try to amend this Act piecemeal, but should take advantage of the first opportunity to examine the Act and revise it if necessary, following the same procedure followed when the Act was first introduced. Would that not be the best way to attempt to bring about a betterment of the Act?

Mr. Angus MacInnis (Vancouver East): Mr. Speaker, I shall answer the question asked by the Parliamentary Assistant before I go on to say what I intended to say on the second reading of this bill. If the idea he is proposing is accepted, that Acts should not be amended before a certain period of time has elapsed, then no Act would be amended except when the Government—it would have to be the Government—believed that a complete revision should take place. I do not accede to that theory at all. I believe this House—that

is what we are here for—should amend legislation whenever we believe it would be in the public interest.

There is another reason why this particular amendment should not be considered as a fundamental change in the Act. The amendment proposed in the bill sponsored by the Hon. Member for Winnipeg North Centre (Mr. Knowles) was approved when the committee on industrial relations was considering the bill before it became law. When the bill came into this House a motion was moved to rescind or delete the decision of the committee, and that was carried in the House. Therefore we are not asking for something that has not been before the industrial relations committee, or that has not been approved by the committee of 1948. . .

May I call the attention of the Parliamentary Assistant to the fact that almost the first provision in the Industrial Relations and Disputes Investigation Act dictates to workers and employers what they must do. It tells them that they must meet together and bargain together in good faith. That is something I am sure the Parliamentary Assistant would have strenuously objected to ten or fifteen years ago, if he had been in the House and such a proposal had been made. That step having been taken, other steps just as far-reaching have also been taken in the short time the Act has been in effect. Let us see what the bill does. The amendment reads as follows:—

> Upon request of a trade union entitled to bargain collectively under this Act on behalf of a unit of employees and upon receipt of a request in writing signed by any employee in such unit, the employer of such employee shall, until the employee in writing withdraws such request, periodically deduct, and pay out of the wages due to such employee to the person designated by the trade union to receive the same, the union dues of such employee; and the employer shall furnish to such trade union the names of the employees who have given and withdrawn such authority.

I do not agree that Parliament would be dictating to either employer or employee if this amendment were passed. As a matter of fact Parliament would not be going any further than conciliation and arbitration boards have already gone in this direction. I think it was pointed out by the Parliamentary Assistant that the check-off was made part of the recent agreement reached between the railway companies and the non-operating employees. . .

We are not asking for any more in this amendment than is implicitly stated in the provision contained in the new agreements affecting the railways. Since we have had the so-called Rand formula in effect a principle has been developed the suggestion of which only a few years ago would have been considered outrageous, namely that all employees of an organization or industry covered by an agreement, whether or not they are members of the trade union, must pay trade union dues. The principle there is quite sound. The union provides advantages to the employees covered by the agreement, to those who are not members of the union as well as to those who are; but when such a provision does not apply, namely that non-union employees must pay union dues, non-union employees get the advantages without any expense whatever on their part. As a matter of fact it has been recognized that these non-union employees are spongers, and such a condition should not be tolerated in a properly organized democratic society. . .

Mr. Coté (Verdun-La Salle): I think these are three important questions. . .

First, the Hon. Member has extended the meaning of my contention that we should rather favour revision of the Act by the same procedure that was followed when it was introduced, than bring amendments piecemeal. The Hon. Member said that we do carry amending bills regularly in this House and it would not be a good move to have a bill amending an existing statute opposed with the suggestion that the whole Act should be revised in each instance. I suggest that the Industrial Relations and Disputes Investigation Act is not an ordinary Act. It is one which deals with human relations and, precisely on account of that, there are basic principles which should not be changed piecemeal. There was a specific purpose in laying down the basic principles of this important Act, and in submitting them for approval by organizations of labour and management and by the members of this House, through a committee. The Act should not be altered in any of its basic features without the whole Act being considered through the same process.

In the second place, the Hon. Member says that at the very beginning of the Act there is a provision making it compulsory for labour and management to negotiate. He says that we already have that compulsory feature at the very beginning of the Act. Yes, labour and management are obliged to get together and bargain in good faith; but the Act does not say in any way what the bargain shall be. I say to my hon. friend that this bill would be one that would tell the parties what they must include in their agreements as far as

union security is concerned, namely the voluntary revocable check-off of union dues.

Mr. J. H. Dickey (Halifax): ...My particular concern in so far as the subject matter of the bill is concerned has been the position of the employees of our two great railway systems. It has always appeared to me that their position has been one of the more important factors in considering the provisions of our labour code and the suggested amendment contained in this bill. I am not going to put on record any quotations which indicate the stand I have taken in the past but I would like to say that, in addition to expressing my views in the House here, I have felt that it is the duty of Members of Parliament to discuss questions of this kind with their constituents to determine what their views are and whether or not they have any suggestions about how these questions can be approached and dealt with.

For that reason I have discussed on a number of occasions the exact subject matter of this bill with friends of mine in the membership of railway unions in my constituency of Halifax. I have found that some of them agreed with the general position that I have taken in the matter, and some of them did not agree. My position, as far as they were concerned, was to urge that, if they wished to have a check-off, they should present those wishes to the companies in the course of their regular collective bargaining, with the objective of attempting to secure the kind of check-off they wished through that process. I have also taken the opportunity of expressing my views to one of the railway companies about what they should do; that they should consider this question as a matter of collective bargaining and not expect Parliament to deal with it as a matter of legislation.

Some hon. Members: Six o'clock.

On motion of Mr. Dickey the debate was adjourned.

January 27

The House resumed, from Friday, January 23, consideration of the motion of Mr. Knowles for the second reading of Bill No. 2, to amend the Industrial Relations and Dispute Investigation Act (voluntary revocable check-off).

Mr. J. H. Dickey (Halifax): Mr. Speaker, when the consideration of this bill was last before the House I had begun a few remarks in relation to it. When the debate adjourned I had been referring to this legislation and to the history of the consideration of similar bills in this House. I had pointed out that it was my view, and a view shared by many Hon. Members, that a subject matter of this kind was something that should be left to the process of collective bargaining. I had pointed out that my main concern with regard to this matter was as it affected the employees of our two great national railway systems, and the steps I had taken in an attempt to do what I could to see that both parties concerned, management and labour in this particular industry, considered their positions with respect to the check-off from that point of view rather than to await or expect any legislative action on the part of this Parliament to deal with it.

In his very complete and excellent speech on this matter the last day the House considered it, the Parliamentary Assistant to the Minister of Labour (Mr. Coté) referred to the recent settlement of differences between the railway management and the non-operating employees, and the new contract which had been entered into between the railways and the unions representing those classifications of their employees; and he pointed out that as one of the terms of this recent agreement the employees had been granted a form of union security, the check-off, on what I believe to be a very much more favourable and more satisfactory basis than would be provided under the provisions of the enactment which is before the House this afternoon and which in virtually identical form has been before this House in previous sessions.

I believe that the conclusion of this agreement between the railways and the unions representing their non-operating employees is a vindication of the position that has been taken in this matter by the Minister of Labour and by Hon. Members who have indicated views similar to those expressed by him and by the Parliamentary Assistant. It is certainly a vindication of the position of a former Minister of Labour, the late Humphrey Mitchell. . .

It must be obvious to all who are interested in and understand the labour movement that the position he took in those days has certainly been vindicated by the events of this year which were referred to in his speech the other evening by the Parliamentary Assistant. . .

The late Humphrey Mitchell always used to say that what governments can give governments can take way, and he did not want to see essential elements of working conditions, conditions of labour and all that sort of thing, which he regarded as matters for collective bargaining, brought into the realm of the kind of thing about which we legislate in Parliament.

I support that view. That is the reason for the stand I have expressed on many occasions in the House, and which I repeat today. I think the probabilities are—and I would hope this would occur—that the step taken to establish the Rand formula check-off for the non-operating unions of the railways will gradually be extended and adopted in respect of other employees who would be affected by this legislation. I should think that, in that event, the end result would be much more favourable, both from the point of view of labour and of management, in all the industries which come under the provisions of our national labour code. . .

Mr. C. E. Johnston (Bow River): ...It has been said by speakers on the government side of the House that the proper way to deal with a bill of this kind is to refer it to the industrial relations committee. I recall back in 1948 that this very question came up before the committee. Of course I realize that the present Minister of Labour (Mr. Gregg) was not Minister at that time, the Minister then being the late Hon. Humphrey Mitchell.

This question has been given lengthy consideration in the committee on a number of occasions. I remember it was given a thorough going over in the industrial relations committee in 1948, and the committee voted in favour of having a voluntary revocable check-off provision included in the legislation. When the bill was reported back to the House it was the then Minister of Labour who caused that provision to be rescinded. If the same attitude is to be taken when the committee is next set up as was taken at that time, no good purpose can be served in even having it referred to the committee. The attitude of the Government, as it has been presented to us during this debate, does not seem to have changed from what it was at that time.

I cannot understand why there should be so much government objection to having a voluntary revocable check-off provision in our labour code. The compulsory check-off is included in the legislation in Alberta having to do with our teachers. To my knowledge there has never been any objection either from teachers' organizations, from school boards or from anyone else about that legislation. I understand that similar legislation has worked quite satisfactorily in Saskatchewan.

I think I am safe in saying that all of the mining contracts in Alberta contain a voluntary revocable check-off provision. It is true that that is not by legislation but by negotiation, but the provision is there just the same and there has been no complaint in that regard. I feel quite sure there would be no complaint in connection with the mining contracts if that provision were in the legislation. Both types, the compulsory check-off and the voluntary check-off, are working there, and certainly no objection has ever been raised.

It is all very well to say that this should be done by negotiation. The Government has pointed to the new contract which was entered into on December 19 between the non-operating employees and the railroads as indicating the method that should be followed. Mr. Speaker, as I well remember when I was teaching in the province of Alberta, there were a very small number of us who continued to pay our fees to the Alberta teachers' organization. A great many of those people who were teaching and this applies to all types of labour —would only pay their dues when they found themselves in need of assistance from the association. That point should be remembered.

Anyone who has had anything to do with labour organizations, be they teachers or miners, knows that you just cannot carry on an organization without proper financial assistance. . .

It is most difficult indeed for any workers' organizations to carry on unless they have a very definite means of getting financial assistance. There is no doubt in anyone's mind that the labour organizations have given in the past and are now giving a service to their members which has resulted in raising their standard of living very materially. It is they who have improved the working conditions of working people in this country more than any other type of organization. Everyone acknowledges that, and these unions can only function if they have some means of raising the necessary funds to carry on. They have found by experience that it is most difficult to carry on in the manner in which the Government would have them carry on. . .

Mr. L. Cardin (Richelieu-Verchères): ... I do not believe that anyone has really been opposed to the voluntary revocable check-off proposed by the Hon. Member for Winnipeg North Centre (Mr. Knowles). There is nothing radically wrong with the principle, and no one on this side of the House objects to it. However, there can be some question about its efficiency. As the Hon. Member himself has stated, this particular principle of the voluntary revocable check-off does exist in most of the provinces. As it is applied in practically all industries where unions are authorized by their respective labour commissioners,

I do not believe that anything would be added by having federal legislation on the subject. As the Hon. Member says, the motion can do no more than give a minimum amount of union security, so the purpose of the motion itself would not avail a great deal for union security of which everyone is in favour. The particular principle already exists in the different provinces and is applied in practically all the large industries of the provinces.

There is one other question which to my mind is rather important, and it is a question of policy. I have not been here sufficiently long to know what the exact policy of the Government is on this subject but I personally feel that the federal Legislature, as a matter of principle, should keep out of business and industry as much as it possibly can. . .

I believe that, as a matter of policy, the federal Government should only in case of absolute necessity, but not as a general practice or policy, invade the field of industry, which to my mind should be left under the control of the provincial Governments. May I say that since the voluntary revocable check-off exists in the provinces; since it applies to most industries throughout Canada; since it can give only a minimum amount of union security, then I do not see any point in passing this bill. I feel that I should vote against such a measure.

Mr. J. A. Byrne (Kootenay East): Mr. Speaker, the Hon. Member for Richelieu (Mr. Cardin), who has just taken his seat, put his finger on the crux of this situation. He has pointed out that many of the provinces have provided for the voluntary revocable check-off in industries over which the provinces have jurisdiction. The federal labour code applies to those industries which are interprovincial in character, and therefore do not come within the legislative competence of the provincial governments. The people who are employed in those industries, such as communications and so forth, are therefore a group of people who might be termed second-class citizens, because of the fact that they do not come under provincial jurisdiction, and because of the fact that their unions have to deal on a national basis for many of their benefits.

Now, I believe the most important reason for the voluntary revocable check-off is that it does bring the employer and employee together on a basis of recognition. While forcing the employer to give recognition to the union, after a time it removes the feeling of animosity that existed before this measure of security was obtained. When an employee makes an assignment of his wages for any other purpose, it has been honoured by the employer. In the case of income tax collections for the federal Government it is not even necessary to make a written assignment of your wages. The assignment of a portion of an employee's wages each month for the payment of bonds has been accepted as a good policy. Deductions are made for other purposes, such as housing loans and welfare societies; and in cases where employees band together for the purpose of insuring their health, they may have the premiums deducted from their wages. When an employer refuses to honour a written assignment for another body, an organization just as important as the employer organization, then it necessarily causes a feeling of resentment and does not act in the best interests of labour relations. Some employers refuse to accept this principle, yet in the provinces where the principle has been accepted we find the very best of labour relations and the unions enjoy some measure of security.

I would say to the House that there is a very limited amount of compulsion in the voluntary revocable check-off . . .

February 3

The House resumed, from Tuesday, January 27, consideration of the motion of Mr. Knowles for the second reading of Bill No. 2, to amend the Industrial Relations and Disputes Investigation Act (voluntary revocable check-off).

Hon. Milton F. Gregg (Minister of Labour): In rising to speak to this bill, Mr. Speaker, I should like to say to the Hon. Member for Winnipeg North Centre (Mr. Knowles) that his introduction of it has served a very useful purpose because it has evoked an interesting debate. I should like to thank all those who took such an active part in that debate. . .

I do believe in union security. I see nothing wrong in union security measures, even though I much prefer those that are freely agreed upon by labour and management. I am very pleased indeed when I learn that new collective agreements have been signed providing for union security for the first time, or extending for the second and third time the scope of previous provisions. I am pleased when these agreements have been reached freely by the two parties. My reasons for feeling that way are, first, that I am in favour of collective bargaining; second, I believe in the value of having strong and stable labour unions in Canada.

Now, Mr. Speaker, there are a good many Members in this House who sincerely do not want to see employers compelled by legislation to initiate a check-off in their plants, any more than they want to see a prohibition against the union security measures in our legislation here. The question has been asked as to whether it is necessary or desirable that a responsible union should derive its stability from government-imposed conditions rather than freely negotiated agreements. That, I think, is the question to which we need to give a great deal of thought and study.

In closing his speech on the motion for second reading of the bill, my hon. friend said he was encouraged by the fact that this principle has now been accepted by the railway companies and by the union representatives of many of their employees. I would say to him that the only principle the railways or the employees accepted was the principle of a negotiated check-off, freely agreed upon in the process of collective bargaining. The principle contained in the provisions of Bill No. 2 is the principle of a legislated check-off, with the word "voluntary" applying only to the individual employee and having no reciprocal connotation for the employer. . .

It should not be forgotten that our law dealing with industrial relations already makes pretty secure the position of unions which by their own effectiveness and merit are able to enlist the loyalty of a majority of the workers in any given bargaining unit. The right of employees to joint unions and to carry on their lawful activities is protected, and interference and coercion on the part of employers through unfair labour practices are prohibited under penalty.

Earlier in this debate my Parliamentary Assistant (Mr. Coté) and also the Hon. Member for Edmonton East (Mr. Macdonald) made some pertinent references to The Maintenance of Railway Operation Act which terminated the railway strike of 1950. There was universal agreement that all the elements of compulsion in that bill should disappear, and should constitute no precedent. I am glad to say that the compulsory features of that statute have long since passed into limbo, and the parties are to be commended for having reverted to orderly collective bargaining, with enough good will on both sides to work out a settlement without disturbing industrial peace.

By any fair standard I think it will be agreed that our labour relations act is working out well. From here on I do not think any of us want Parliament to impose statutory obligations upon employers and trade unions which might throw out of balance the factors of compromise and co-operation which are essential in collective bargaining. In order that collective agreements may be freely negotiated it is necessary to have a climate of good will, free from any excessive compulsion. It is that climate of good will, of mutual confidence, of willingness to conduct sincere negotiations, that the Department of Labour is ever seeking to encourage.

There are two schools of thought reflecting divergent philosophies on this matter. The views of one group are that the matter of check-off of dues is one which, in common with other conditions of employment, should be dealt with by the processes of free collective bargaining, and that legislative interference with those processes will not operate in the long run to the best interests of the trade unions and their members. The other school of thought, as expressed in the bill, is that the matter of the check-off of union dues is one which should be removed from the collective bargaining field and disposed of by legislative enactment.

My Parliamentary Assistant, speaking of this bill on January 23 in this House gave, in my opinion, a very clear analysis of the arguments related to this legislative proposal. For some time now the Parliamentary Assistant has been taking an active part, with my Deputy Minister and senior departmental officials, in studing the results of experience so far gained under the Industrial Relations and Disputes Investigation Act.

The results of those studies may well lead in the future to proposals for amendments to the Act. I do think, however, that any amendments made to this Act ought to be most carefully considered and should be brought forward from time to time in groups rather than one by one in a haphazard fashion. It may be that at some future time, when a group of such amendments are brought forward, something along the lines of this bill may find its place amongst them. But we can afford, I think, to go slowly in the knowledge that the degree of industrial accord within our country is not necessarily measured by the number of laws we make on labour relations, but rather is it measured by the good will and determination of the parties concerned to find a fair solution based upon mutual confidence.

In view of the interest in this matter and having regard to the diverging views expressed, I believe that before this House is asked to vote on the principle of Bill

No. 2 the bill should receive further and careful study by the competent committee of this House. I would therefore move, Mr. Speaker, seconded by the Minister of Public Works (Mr. Fournier):—

That Bill No. 2 be not now read a second time but that the subject matter thereof be referred to the select standing committee on industrial relations.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, there is a sense in which the amendment just moved by the Minister of Labour (Mr. Gregg), may be interpreted as a move against my bill, but I do not choose to look upon this amendment in that light. If one analyses the remarks the Minister has just made, one could not say that he is favourably disposed to my bill; but at any rate it can be said that in the amendment which he has just moved there is afforded the possibility of further discussion of the subject matter or in other words the principle of this bill.

I think it is obvious to everyone that that course is much to be preferred to the defeat of the bill on the floor in this House, something which I take it might follow again if the Government were to give the lead against the second reading of this bill. It is therefore my intention, Mr. Speaker, to indicate my readiness to accept the amendment that has been moved by the Minister of Labour and to express the hope that, rather than the bill being defeated this course might be followed and the subject matter be referred to the standing committee on industrial relations. . .

I hope that the result of the deliberations of the committee on this matter will be that there will be a report back to the House at this session recommending that this bill be reintroduced and that the voluntary revocable check-off be written in the national labour code. It is of course up to the House what it does with the amendment proposed by the Minister; but in view of the fact that it does provide an opportunity for discussion of this measure by the committee I would be pleased if the amendment were accepted by the House.

Mr. George A. Drew (Leader of the Opposition): Mr. Speaker, I wish to discuss this from the point of view of the proposal that is now made to refer the matter before the House to a committee. In explaining why he was introducing the amendment which he moved, the Minister of Labour (Mr. Gregg) pointed out that he did so with the idea that this would give an opportunity to consider the matter at the appropriate time. I understood him to say that this might then be dealt with at the time; that a group of amendments could be brought forward on some other occasion. If that is the situation, Mr. Speaker, the acceptance of the amendment as it now stands simply means that this proposal is shelved and that no positive steps are to be taken to have a review of the Act, which is long overdue.

It will be recalled that on other occasions we have proposed that there should be a general review of this Act. One of the questions that arise in regard to any single amendment of this kind is that the most desirable practice is to have a general examination of the whole Act, because patching up the Act in one spot or another may not produce the desired results. In the end, as has happened on a number of other occasions, an unwieldy and sometimes incoherent Act may result, and clauses introduced into the Act by way of amendment from time to time may easily conflict with each other when they subsequently are interpreted by the courts or elsewhere, and they may in fact defeat the very spirit of the Act itself. Often a few words introduced without regard to the whole Act and the intention of the Act have had the effect of defeating the very purpose for which the amendment was introduced.

If the recommendation which the Minister now makes is as I understood it from his words, then the proposal before the House is simply to be put in cold storage and at some unannounced date when a general consideration of this Act is to take place it might then receive consideration or might not. If there is to be a reference of any kind to a committee to deal with the Industrial Relations and Disputes Investigation Act, then I suggest that this is the appropriate time to ask once again that there be a general review of the whole Act. I think the time is more than ripe for such a general review. . .

. . . A desirable labour relations act should seek to establish, first of all, the basic right of employees to associate themselves in trade unions for the purpose of bargaining with employers and obtaining for themselves adequate wages, fair working conditions and an assurance of advancement in return for work well done. The Act should also make it possible for those who represent the worker to carry out their duties on behalf of the employees in an orderly, lawful and constructive manner so that the purpose of that association of employees may be fully recognized.

A good labour relations act should be based on the thought of the mutual respect which can be established between employees and employers whenever occasion comes to carry out collective bargaining. The whole Act should follow a constructive and integrated pattern which will from time to time bring into legislative form the advances which have taken place in the relations between the employees and employers. Such an Act should also be constantly under review so that from the experience which has been gained under the legislation in existence improvements may be made. . .

In presenting his amendment the Minister has indicated that he has in mind deferring action on this until such time as a group of amendments might be brought forward. I think this is the time when consideration should be given to amendments generally which will bring the whole Act into conformity with modern practices and advance the harmony of relations between employees and employers in every way possible. With that in mind I therefore move, seconded by the Hon. Member for Hamilton West (Mrs. Fairclough):—

That the amendment be amended by adding thereto the following words:

"with instructions that they have power to consider and to recommend amendments to the Industrial Relations and Disputes Investigation Act, with a view to bringing the Act into conformity with current practices of employment in industry and of ensuring the greatest possible harmony between employees and employers. . .

Mr. Deputy Speaker: Perhaps I should deal with the subamendment which was moved by the Leader of the Opposition and say that this subamendment certainly enlarges the scope of the amendment moved by the Minister. In the second place I would say that the point which strikes me as most important is that this bill is to amend the Act with respect to the check-off. The amendment of the Minister of Labour is relevant to the principle of the bill, in that it moves that the subject matter of that particular bill be referred to the standing committee on industrial relations. The subamendment of the Leader of the Opposition is not relevant to the amendment moved by the Minister. It deals generally with the Act which the bill before the House tends to amend in one particular only.

I do not have ready before me the various references, ...however, ...I am satisfied that this amendment to the amendment is not in order.

Is the House ready for the question?

Mr. Gregg: Before the question is put may I just say one word prompted by the remark of the Leader of the Opposition (Mr. Drew) with whose words, in the main, I agree. He stated, I think, that the Minister of Labour might put this bill in cold storage. That is not the intention at all. In the Department we are carrying out a review of the Act, in conjunction with representatives of employers and employees in the light of what has been experienced in recent years. There will be recommendations and bills brought forward. I do not think they will be brought forward at this session but perhaps the Minister of Labour, whoever he is, at the next session or the session following will bring them in...

Mr. Deputy Speaker: Is the amendment moved by the Minister of Labour agreed to?

Some hon. Members: Agreed.

Amendment agreed to.

Elimination of Level Crossings

January 26

Mr. J. L. Gibson (for Mr. Murray, Cariboo) moved for leave to introduce Bill No. 106, to amend the Railway Act.

Some hon. Members: Explain.

Mr. Gibson: The purpose of this amendment to the Railway Act, Mr. Speaker, is to provide that, in any future application to the Board of Transport Commissioners for the construction of any railway, the Board shall make such an order as will ensure the elimination of level crossings, and no highway shall be constructed across a railway unless it is carried over or under such railway.

Motion agreed to and bill read the first time.

January 30

Hon. Lionel Chevrier (Minister of Transport): Mr. Speaker, I am sure the House will be grateful to the Hon. Member for Cariboo (Mr. Murray) for having introduced the principle of the bill, and for having brought once again to the attention of the House the very serious matters with which it deals. . .

I commend the Hon. Member for his desire to deal with this matter, but I must say to him with all respect that the amendment to the section of the Railway Act which he suggests does not begin to deal seriously with the problem. The Government saw fit early in the year . . . to ask the Board of Transport Commissioners to study the whole problem of railway grade crossings. It gave the Board full power, as set out in Order in Council P.C. 1953/52, to make a complete and thorough investigation and study. I think it would be no compliment to the Board of Transport

Commissioners if at this stage the House were to say to it that it should do as set out in the bill.

Then there are several objections to the bill. The first I see is that it makes the implementations of this section mandatory upon the Board. In other words the Board would be obliged to force the railways to construct a grade separation after July 1, 1953 upon any application that was made. As it is today, the Board has that power under the Act. It is a discretion it has, and that discretion should not be taken away; because if it were taken away there would be no way of determining which crossing should have priority because of density of traffic or density of population or because of location.

With the section the way it is worded now I can see a situation where in an isolated part of Canada, at a place where there was little traffic, a railroad would be forced, perhaps in conjunction with the highway authorities, the municipalities and the like, to spend a large sum of money to separate a grade when there was little or no use for such separation in that particular area. I can think of a railroad building a spur line into an area which might cross a highway where there would be little or no traffic—this happens repeatedly—and the grade crossing fund or even the municipality and the railroad would be charged with the expenditure of a substantial sum of money when the grade separation was not really required.

Another objectionable feature is the mandatory provision. The Board now has discretion, and it seems to me that it should continue to have discretion in these cases. . .

The problem is a serious one. If we were to eliminate all grade crossings in Canada the sum of $100 million would barely suffice. If I had the time at my disposal I would deal with some of the causes responsible for the increase of accidents, and I would deal in part with the solutions suggested.

I think the Hon. Member is to be complimented upon his attempt to find a solution. In his anxiety to eliminate these accidents he has submitted this amendment to the House. I know the amendment is well-intentioned, but it deals only with a small portion of the problem. In order to deal with the whole problem the Government has asked the Board of Transport Commissioners, which because of its statutory powers is able to consider problems of this kind, to make a thorough survey of the railway-highway grade crossing problem in Canada. When the Board has made its report it will then be possible to bring down amendments to the Railway Act and perhaps the grade crossing fund. It will be possible to consult the provinces, because I think perhaps one of these sections impinges upon provincial jurisdiction.

I should like to say more on this subject, but it seems to me that I have said enough to indicate to the House that it would not be advisable to accept the bill in its present form. I would hope that the Hon. Member for Cariboo (Mr. Murray), having succeeded in raising interest in the subject and knowing that the matter is being studied by the Board of Transport Commissioners, would see fit under all these circumstances to withdraw the bill.

Mr. Murray (Cariboo): Mr. Speaker, I think some good has been done by ventilating this subject, as the Minister has said... With the consent of hon. gentlemen, I ask that the bill be withdrawn.

The Acting Speaker (Mr. Robinson): Has the hon. gentleman leave to withdraw the said bill?

Some hon. Members: Agreed.

Bill withdrawn.

Fair Employment Practices

January 27

Mrs. Ellen L. Fairclough (Hamilton West) moved the second reading of Bill No. 4, to promote fair employment practices in Canada.

She said: Mr. Speaker, as Hon. Members are aware, this bill in substantially the same form has been on the order paper for several sessions and unfortunately has not, until this session, reached the stage of second reading at an opportune time.

I might say that at the beginning of the present session I was both surprised and pleased to hear, in the Speech from the Throne, that it was the intention of the Government to introduce a similar piece of legislation. That bill now appears on the order paper as Bill No. 100. I have examined Bill No. 100; and since it covers substantially the same ground as that covered by Bill No. 4, in so far as I was able to discover, it is my opinion that no good purpose would be served by proceeding at the present time with Bill No. 4. I therefore beg leave to withdraw Bill No. 4.

Hon. Milton F. Gregg (Minister of Labour): May I acknowledge the graceful withdrawal on the part of the Hon. Member for Hamilton West (Mrs. Fairclough) of Bill No. 4, to make way for Bill No. 100 now on the order paper in my name. I would also like to express the hope that Bill No. 100 either does or can be made to meet her wishes in this matter.

The Acting Speaker (Mr. Robinson): Has the Hon. Member leave to withdraw the bill?

Some hon. Members: Agreed.

The Acting Speaker: The bill is withdrawn.

Government Annuities Act

February 3

Mr. Stanley Knowles (Winnipeg North Centre): May I direct a question to the Minister of Labour (Mr. Gregg). Can the Minister say whether legislation amending the Government Annuities Act, such as the legislation we had in 1951 which was not proceeded with, will be re-introduced at this session?

Hon. Milton F. Gregg (Minister of Labour): No, Mr. Speaker.

Question on Unemployment Insurance

February 4

Mr. Knowles:

1. Has the Unemployment Insurance Advisory Committee made any recommendations with respect to any changes in the rates of unemployment insurance benefits or any changes in the rates of unemployment insurance premiums arising out of a consideration of the amount of money now in the unemployment insurance fund?
2. If so, what are the terms of such recommendations?
3. Have such recommendations been considered (a) by the Unemployment Insurance Commission; (b) by the Government?
4. What is the result of such consideration?
5. Has the Unemployment Insurance Advisory Committee made any recommendation with respect to the continuing of unemployment insurance benefits to unemployed persons who become ill while on claim?
6. If so, what are the terms of any such recommendation?
7. Has any such recommendation been considered (a) by the Unemployment Insurance Commission; (b) by the Government?
8. What is the result of such consideration?

Mr. Gregg:

1. No, not specifically arising out of the consideration of the amount of money in the unemployment insurance fund; however, as a result of reports from the Unemployment Insurance Commission and representations from labour union federations, the committee recommended to the Government at its meetings in July 1951, and April 1952, certain changes in the Act and concurred in changes recommended by the Unemployment Insurance Commission in certain regulations.

2. (a) The reduction of the waiting period by three days.

(b) Amendment of Section 35 (1) (b) to give the Commission power by regulation to defer the waiting period when a benefit year terminates during a period when the claimant is unemployed.

(c) The increase in the scale of benefit rates raising the maximum rate for a beneficiary with a dependent from $21 to $24, with comparable increases in other rates, with no increase in contribution rates.

(d) The period during which supplementary benefit may be paid to be extended from March 31 to April 15.

3. The Unemployment Insurance Commission recommended these changes to the Government and they were put into effect by Act of Parliament assented to on July 4, 1952. In addition, the Commission by regulation provided for the postponement of the waiting period where a benefit year commences within fourteen days of the termination of the previous benefit year and where the claimant was employed for less than six days during that two-week period; and another regulation provided for the payment of benefit during a holiday shut-down of more than one week where no pay was received from the employer.

4. Answered by No. 3.

5. No, the Unemployment Insurance Commission and the Advisory Committee have found the problem most difficult of solution but are now giving it further consideration.

6, 7 and 8. Answered by No. 5.

Question on Teletype Perforators

February 9

Mr. Knowles:

1. Has the Government received any representations asking that experience typographers who are capable of operating teletype perforators be given the opportunity to do such work at the Government Printing Bureau?
2. If so, what are the terms of such representations?
3. What consideration has been given to any such representations?

Mr. Bradley:

1. A copy of resolution No. 5 adopted at the eighth conference of Ontario Federation of Printing Trades unions was very recently received.

2. That typographers be given the opportunity to operate teletype perforators installed in the Public Printing and Stationery Department.

3. The resolution will be given consideration.

Seniority Provisions in Collective Agreements in Manufacturing

Study of 290 agreements covering 216,500 workers in Canadian manufacturing showed 231 of them, covering 194,700 workers, had such clauses

Since seniority clauses are concerned with security of employment and promotional opportunities, matters of vital importance to industrial workers, seniority is, and has been for many years, an important subject of collective bargaining. Because of the interplay which arises from attempts to satisfy on the one hand the need to give fair scope to skill and ability and on the other hand the employee's desire for job security, the seniority clause is a most important feature of collective agreements. This article, prepared in the Economics and Research Branch, Department of Labour, analyses seniority clauses in 231 agreements in Canadian manufacturing industries.

A recent examination of 290 agreements in force in Canadian manufacturing establishments and covering 216,500 workers revealed that 231 of them, applying to 194,700 workers, have seniority provisions. (The 290 agreements examined were selected to give representation to the various manufacturing industries and to the unions active therein, to geographic areas, and to plants of various sizes. Consequently, although the sample is small, it does make possible some useful observations on the ways in which this matter is handled in collective agreements in manufacturing.)

Among the agreements not having seniority provisions are a considerable number which make provision for the equal division of work during slack periods. These provide for the sharing of available work by reducing hours to avoid laying off employees. Such arrangements are made most frequently in industries subject to marked seasonal fluctuations which would otherwise result in appreciable staff reductions during certain times of the year.

Seniority provisions in collective agreements deal with problems of staff adjustments resulting from layoffs, re-hirings, promotions or transfers. In the early days of unionism on this continent, unions often charged employers with making such adjustments on the basis of personal likes and dislikes and a preference for non-union workers.

Through seniority provisions, labour unions sought to relate employment security to length of service. They contended that workers employed a considerable time by a company have a greater right to employment and advancement with that firm that those on staff for a lesser period. Unions therefore pressed for the adoption of seniority systems basing job preference on length of service.

The knowledge that his seniority is an important consideration enables an employee to gauge his tenure of employment and promotional opportunities relative to other workers. Insecurity is reduced for workers who have acquired seniority. While seniority systems do not affect the necessity for staff adjustments such as layoffs, they do shift insecurity from the entire work force to those with little or no seniority.

Most employers have long since accepted the principle that seniority is a factor which should be considered in making staff adjustments. Consequently, there is little dispute today between managements and unions over whether or not seniority provisions should be included in collective agreements. Differences arise, however, over a number of problems of application.

In the early days of union-management bargaining, when bargaining units generally covered small numbers of skilled tradesmen, problems in the application of seniority were few. But with the spread of union organization to manufacturing industries using mass production methods and the appearance of bargaining units covering entire plants and even groups of plants employing workers in numerous departments and of varying skills, the application of seniority systems became more complex.

In the agreements examined for this study, there appear to be three basic problems concerning the application of seniority. The first concerns the relation-

ship between merit and length of service and is dealt with in so-called "skill and ability clauses"; the second concerns the specific conditions of employment to which seniority is to apply; and the third concerns the plant divisions or districts within which the workers are to be ranked in order of seniority.

Managements have generally held that, in order to maintain the most efficient work force and to reward highly qualified employees, skill and ability should have a significant place in promotions, layoffs and re-hirings. While unions have generally stressed the importance of length of service, many have agreed that skill and ability must also be considered. Thus, most seniority systems in the manufacturing industries today are based on a combination of length of service and merit. Differences arise over the relative weights to be attached to each.

Most collective agreements in the manufacturing industries provide that reductions in staff, re-hirings following a layoff, and promotions are situations calling for the application of seniority clauses. In addition, provision is usually made to protect an employee's seniority standing should he be transferred to another job within the bargaining unit. There has been controversy as to whether seniority should apply in promotions but, with the incorporation of skill and ability qualifications in seniority plans, part of the difficulty has been overcome.

The problem of seniority divisions concerns whether or not seniority is to be exercised on a plant-wide basis, a departmental or similar group basis, or a combination of these. For craft bargaining units, no problem exists, since seniority will apply only within the craft group. The problem comes to the fore in industrial units covering large sections of plants or entire plants. Many managements, particularly in larger plants, consider that greater efficiency is obtained and the work force least disrupted when seniority is confined to departments or occupational groups. On the other hand, unions feel that plant-wide seniority conforms more closely with their objectives in bargaining seniority clauses in that it gives the maximum security and opportunity to long-service workers. Recognizing that both types have advantages, many unions and managements have worked out seniority plans combining plant seniority with seniority by groups.

Skill and Ability Qualifications—Of the 290 agreements examined, practically all the 231 establishing seniority systems also qualify their operation with skill and ability clauses (Table 1). The majority make length of service the deciding factor *only* where skill and ability are *relatively equal.* Also found fairly frequently is a qualification making length of service the governing factor so long as an employee has *sufficient* skill and ability to perform a task to which he may be assigned.

Clauses of the first type give more emphasis to skill and ability than to length of service. Merit is in fact the deciding factor. An employee of considerable skill and ability may be promoted or retained in employment during a layoff over employees with greater seniority who, even though they may have sufficient skill and ability to do the same job, do not have as much as the employee of lesser length of service. On the other hand, clauses of the second type make length of service the predominant factor, since senior employees need only possess the minimum skill and ability necessary to perform a job in order to meet the clause's merit requirement.

A third type of merit clause found much less frequently and noted in Table 1 states merely that skill and ability are considered along with length of service. No mention is made, however, of the relative importance to be attached to each.

Skill and ability are difficult factors to measure and differences between employees cannot be determined with precision. Thus, in the collective agreements, definitions of skill and ability or criteria for their measurement are not, as a rule, set forth.

TABLE 1.—SKILL AND ABILITY QUALIFICATIONS IN SENIORITY CLAUSES

(231 Collective Agreements in the Manufacturing Industries)

Skill and Ability Clause	Contracts		Workers Covered	
	No.	%	No.	%

Seniority applies where skill and ability sufficient	54	23	41,100	21
Seniority, skill, and ability considered together, but relationship not set forth	28	12	16,000	8
No skill and ability provision	8	4	3,200	2
Totals	231	100	194,700	100

TABLE 2.—SITUATIONS TO WHICH SENIORITY APPLIES

(231 Collective Agreements in the Manufacturing Industries)

Seniority Application	Contracts		Workers Covered	
	No.	%	No.	%
Layoffs, rehirings and promotions	127	54·9	132,700	68·2
Layoffs and rehirings only	41	17·7	15,900	8·2
Layoffs and promotions only	35	15·2	32,700	16·8
Layoffs only	16	6·9	6,000	3·1
Promotions only	7	3·1	5,800	2·9
Not specified	5	2·2	1,600	·8
Totals	231	100·0	194,700	100·0

For the most part, decisions are left to management, subject to the union's right to challenge them through the grievance procedure. As a result, the application of the seniority provisions gives rise to a substantial volume of grievances.

Situations to which Seniority Applies—The large majority of the 231 manufacturing agreements list the situations which require the application of the seniority provisions, although many do not describe the application in detail. Most of the contracts specify that seniority is to be followed for layoffs, re-engagements, and promotions (Table 2). Almost invariably, seniority must be considered in laying off employees but, as the table shows, a number of the seniority systems examined fail to mention re-hirings or promotions.

Seniority clauses dealing with layoffs may be of a general nature or may set forth the order of layoff at some length. Clauses of both types were found among the agreements analysed. Those of a general nature state merely that, when the work force is to be reduced, employees will be laid off in order of seniority subject to any merit limitation. More elaborate layoff clauses were frequently found, particularly in highly-departmentalized establishments or in firms where a series of distinct operations exist and where a layoff may affect certain departments or occupational groups and not others. In these, reductions in staff may be on a departmental or occupational basis and an employee to be laid off is prohibited, or at least restricted, from transferring to another group even though he has longer service with the company than employees in other sections.

Very few of the agreements have extensive re-hiring clauses. Most simply state that, subject to skill and ability requirements of the jobs available, workers will be re-engaged in the reverse order of being laid off. However, as pointed out below, many agreements provide that, after being continuously laid off for a specified time, an employee loses his seniority rights and need not be re-hired.

Seniority clauses dealing with promotions may be general or may be limited by confining promotions within departments or occupational groups. Forty-four of the agreements, covering 60,000 workers, require the company to post notices of vacancies for a certain time before positions are filled, to give employees an opportunity to apply.

Seniority Areas or Districts—Seniority clauses sometimes become quite complicated, and even ambiguous, in attempting to define the area or district within which seniority is to apply. Not all agreements describe in detail how the system operates. As indicated earlier, managements frequently desire to confine the application of seniority to departments or occupational groups, whereas unions tend to seek a plant-wide system. Most workers in the study were covered by agreements which provided for some sort of combination of the various seniority districts (*see* Table 3).

Occupational seniority, which means that employees can exercise seniority only within the occupational group to which they belong, was comparatively rare. This type of seniority is usually found among craft groups where the collective bargaining unit covers only the particular craft. Department-wide seniority, strictly adhered to, permits employees to accumulate and exercise seniority rights only within the

TABLE 3.—OCCUPATIONAL, DEPARTMENT AND PLANT SENIORITY

(231 Collective Agreements in the Manufacturing Industries)

Type of Seniority	Contracts		Workers Covered	
	No.	%	No.	%
Occupational wide only	4	1·7	1,500	·8
Department wide only	45	19·5	31,600	16·2
Plant wide	31	13·4	13,500	6·9
Occupation wide and Department wide	9	3·9	5,700	2·9
Occupation wide and Plant wide	2	·9	300	·2

Type of Seniority not stated	75	32·5	38,100	19·6
Totals	231	100·0	194,700	100·0

department in which they work, although they may move from occupation to occupation within the department without affecting these rights. Plant-wide seniority permits employees to exercise their seniority throughout the establishment. In the combination types, employees can apply their seniority only within the smaller district in some circumstances but over the broader areas in others, as discussed below.

The agreements examined indicate that plant-wide seniority is most likely to be found in establishments employing relatively small numbers of workers and where the various jobs do not require high degrees of skill. In some establishments, employees can, with little training, handle most jobs in the plant. On the other hand, among larger plants having distinct occupational and departmental structures, seniority by group or combined plant and group seniority is more frequent.

Many of the agreements do not describe precisely how seniority operates within the various seniority districts. Furthermore, a number of the contracts state that seniority is on a restricted basis although it is evident from the wording of the clauses that it may actually be applied on a broader basis in some circumstances.

In the few contracts which state that seniority is on the basis of occupational groups, it is not always clear that seniority rights cannot be exercised over a broader area and in at least one it is evident that an employee laid off from his regular job can use his seniority to displace a worker in another occupation, provided he is capable of handling the task.

About half the contracts providing for departmental seniority plainly specify that its application is to be strictly on a departmental basis. Other agreements, although stating that an employee acquires seniority in the department in which he is assigned, do not make it entirely clear that its application is so limited. In fact, four of these agreements definitely declare that, for layoffs at least, seniority may be exercised throughout various departments, so that in effect it is plant rather than departmental seniority that applies.

Among the agreements which provide for occupational seniority combined with departmental or plant seniority, more than one-third state only that both types of seniority are recognized. A larger number declare that layoffs will be by occupation as far as possible but that qualified senior employees in occupations experiencing staff reductions may move to other occupations.

A substantial majority of the agreements in which a combination of department-wide and plant-wide seniority is operative do specify how the two types of seniority apply. In more than one-third of these agreements, the employee, on completion of a probationary period, acquires department seniority only. After a further period of employment, ranging from six months in some contracts to as high as two years in others, the employee is also placed on a plant-wide seniority list. When reductions become necessary in any department, the order of layoff is often set forth as follows: first, probationers; second, employees in the department with only department seniority rights, in order of seniority; third, employees in the department with plant seniority. But the employees who have acquired plant seniority may displace employees with lesser seniority in other departments.

In other contracts combining department and plant-wide seniority, both types are acquired after the probationary period. Two methods of application are found, each in less than in a dozen contracts. One method makes plant-wide seniority applicable for layoffs and re-hirings but confines promotions within departments. In the second method, layoffs are on the basis of departmental seniority where the staff reduction is for a short period. For longer periods of layoffs, employees can exercise their plant-wide seniority in other departments. The number of days after which plant seniority becomes effective is normally specified.

Some of the largest bargaining units covered by the contracts examined provide for a combination of occupational, department, and plant seniority. In general, where layoffs are to be of very short duration, they are made on an occupational group basis; for layoffs of longer periods, an employee may exercise his seniority throughout the department in which he works; while, for layoffs of some duration, e.g., 20 days or more, plant-wide seniority applies. The periods beyond which seniority can be exercised over the wider areas is specified in all of these agreements.

It will be noted in Table 3 that a substantial number of contracts do not stipulate what type of seniority applies in the bargaining unit. These agreements state only that seniority accumulates from the date of hire and name the situations in which seniority is considered. On the average, the bargaining units covered by these agreements are small in terms of numbers of employees and presumably seniority applies over the entire plant.

Clauses dealing with promotions are usually general in wording, stating only that seniority applies in promotions subject to skill and ability, without specifying the area over which it is to apply. A substantial number of the agreements, however, confine promotions to the smaller seniority units, even though seniority may be exercised over a wider area in cases of layoffs and re-hirings.

Where seniority is on the basis of groups or districts within a plant or is of the combination type, a question may arise about the seniority standing of an employee who is permanently transferred from one group or district to another. More than 70 per cent of the agreements with such seniority arrangements have a clause dealing with transfers. Two methods of handling the matter are found in almost equal numbers among the agreements. One provides that, when an employee is transferred, all his seniority rights go with him to his new job. The other type of clause provides that, when an employee is transferred to another seniority district, he retains his seniority standing in his former group for a limited period of time, after which his accumulated seniority is transferred to his new seniority group.

Seniority Standing of Employees

There are other clauses in the seniority plans which deal primarily with the seniority standing of employees so that they will be correctly ranked on the seniority list or lists and thus facilitate the functioning of the plan. These clauses are as follows:—

Seniority Lists—Of the 231 contracts studied, 121, covering 116,800 workers, specify that the company must prepare and maintain seniority rosters showing each employee's seniority standing. Many agreements also require that the lists be adjusted and brought up to date periodically. Practically all of them require that the rosters be made available to union representatives so that, if any employee's seniority status is believed to be incorrectly shown, the matter may be taken up with the company.

TABLE 4.—LENGTH OF PROBATIONARY PERIOD IN ESTABLISHING ELIGIBILITY FOR SENIORITY

(231 Collective Agreements in the Manufacturing Industries)

Probationary Period	Contracts		Workers Covered	
	No.	%	No.	%
Less than 3 months...	63	27	52,700	27
3 to 6 months inclusive	93	40	86,300	44
More than 6 months..	7	3	7,900	4
No mention of probationary period...	68	30	47,800	25
Totals.....	231	100	194,700	100

Probationers.—Newly-hired employees are not, as a rule, immediately entitled to be placed on seniority lists. A substantial majority of the agreements provide for a probationary or trial period before such workers become eligible for seniority. During the probationary period, the employer can transfer or discharge the employee without violating the collective agreement. Probationers cannot displace employees with seniority and, where a layoff becomes necessary, they must be removed from staff before any employees with seniority are placed out of work.

In the majority of the 231 agreements under review, the time of probation is less than six months, while in a substantial proportion it is less than three months (Table 4).

Upon completion of the probationary period, employees are placed on seniority lists and, under the great majority of the agreements, seniority is then dated back to the time the employee was hired.

Exceptions to Normal Seniority Standing.—Under a minority of the agreements, certain classes of employees are extended special consideration which enables them to remain employed during a period of layoff despite a lack of the necessary seniority. The two groups most commonly referred to are union stewards and employees with skills necessary to plant operation or undergoing special training.

Where such an arrangement applies for union stewards, it is accomplished through a "superseniority" clause under which stewards receive preferred treatment irrespective of their actual seniority. Unions may press for this type of clause to insure that experienced representatives will be available at all times to act on behalf of employees. Among the agreements examined, 39 contain a superseniority clause.

Some companies desire the employees having special skills or undergoing special training be assured of employment during slack periods regardless of their seniority. Twenty-two of the agreements make such provision but, generally, the number of employees to whom such a clause may apply is limited to an absolute number or to a small percentage of the total labour force in the plant.

Authorized Leaves of Absence—Many of the contracts include provisions to protect

TABLE 5.—CLASSES OF AUTHORIZED LEAVE OF ABSENCE DURING WHICH SENIORITY WILL NOT BE AFFECTED

(231 Collective Agreements in the Manufacturing industries)

Class of Permissible Leave	Contracts	Workers Covered
Personal	115	107,800
Full-time union business	44	79,000
Occasional union business	46	45,700

an employee's seniority standing while he is on authorized leave of absence. Two classes of leave for which authorization can be obtained are common in the agreements analysed. One can be broadly designated as leave for personal reasons; the other, leave to engage in union business. The latter may be of two types. Leaves of considerable duration may be granted to employees elected or appointed to full-time union positions. Leaves of short duration may be provided for union representatives to attend conferences. The frequencies of the various classes of authorized leave are given in Table 5.

Leaves of absence to take part in union affairs are frequently restricted to a small number of employees and the time allowed is often set forth in agreements. On the other hand, clauses covering personal leaves are more frequently general in wording, merely providing that an employee, for good cause, may obtain reasonable leave of absence without effect on his seniority status. Only 22 of the agreements mention time limits, and they are almost evenly divided between three months, six months, and one year, subject to renewal.

The number of employees permitted leave without loss of seniority to engage in union activity on a full-time basis is mentioned in more than half the contracts providing for this type of leave. The usual number is one or two but in a few large bargaining units is as high as five. They are, as a rule, allowed time off for the duration of the contract, subject to renewal.

About half the contracts which permit leave to attend union conferences place restrictions on this type of authorized absence. The number who may obtain such leave is usually from two to five. The aggregate time off for this purpose during a year is frequently one month per employee but is as low as one week in some contracts and as high as 2½ months in others.

Loss of Seniority—Under certain circumstances, as outlined in many of the agreements, employees lose their seniority standing including all accumulated service credits. The circumstances most commonly found among the 231 agreements are shown in Table 6.

TABLE 6.—REASONS FOR WHICH SENIORITY WILL BE FORFEITED

(231 Collective Agreements in the Manufacturing Industries)

Reason for Loss of Seniority	Contracts	Workers Covered
Resignation or discharge	141	132,800
Absence without leave	82	96,500
Failure, upon notice to return or signify an intention to return to work after being laid off	123	106,900
Layoff for more than a specified period	121	100,300
No provision re loss of seniority.	61	43,000

Seventy-two agreements contain all four of the reasons shown in the table for which seniority will be lost. The others contain various combinations of the four.

Resignation or discharge results in immediate loss of all seniority rights for the employee concerned. However, a discharge can usually be appealed as a grievance and, if found unjust restored under the terms of the agreement.

Where absence without leave is a reason for an employee losing his seniority status, it is normally specified that the absence must be for a stated number of days before the provision can be applied. Two, three, or five days are the most common time limits in the agreements, although a few permit as much as ten days' unauthorized absence. In a small number, there is no stated time limit.

Similarly, for failure to return to work or signify an intention to do so, a time lag of a few days after the sending of the notice is allowed before an employee loses his seniority standing. There is a tendency for the allowable time to be a little longer than for absence without leave, three, five, seven and eight days being common.

Employees who are laid off retain their seniority status as a rule and, when staff is again increased, they are normally re-hired in the reverse order of layoff. More than half the contracts, however, limit the period of continuous layoff during which seniority can be maintained. Two practices prevail among the agreements analysed: most commonly, it is stated that laid-off employees will be kept on seniority

70169—4½

rosters for a specified period, but in some cases the period depends instead on the employee's length of service (*see* Table 7).

In some agreements having the second type of arrangement, the length of continuous layoff during which seniority will be retained is equal to the employee's length of service. In a few others, seniority status is unaffected during layoffs of one-half the employee's length of service until he had acquired one or two years of seniority, after which layoffs equal to service do not affect seniority. Still other contracts provide a progression to a maximum time after stated periods of service such as a range up to a maximum of one year of layoff after two years of service, two years of layoff after five years' service, three years after ten years, or even five years after five years of service.

TABLE 7.—PERIOD OF CONTINUOUS LAYOFF DURING WHICH SENIORITY WILL BE RETAINED

Vocational Training Advisory Council Holds 19th Semi-Annual Conference

Training of disabled persons is major topic of discussion. Deputy Minister of Labour stresses importance of training the disabled to fit them for permanent employment, help them become self-supporting

Training of disabled persons was the topic of major importance at the 19th semi-annual meeting of the Vocational Training Advisory Council in Ottawa February 19 and 20.

Dr. Arthur MacNamara, Deputy Minister of Labour, in a welcoming address, told the members that the question of supplying adequate vocational training to the disabled in Canada was of prime concern to the federal Government. He stressed the importance of giving proper training to the disabled to enable them to become self-supporting.

The Vocational Training Advisory Council is composed of representatives of employers, labour, war veterans, women's organizations, educationists and other interested groups. Its function is to assist the federal Minister of Labour in formulating policy and administrative procedure in the promotion of vocational training in Canada.

The two-day meeting, under the chairmanship of Dr. G. Fred McNally, former Chancellor of the University of Alberta, was attended by representatives from all ten provinces.

Supervisor of Technical Training

C. R. Ford, Supervisor of Technical Training, reported that statistics for enrolment in vocational classes during the fiscal year 1951-52 were not available. However, Quebec had reported a 30-per cent increase in enrolment in arts and crafts schools over the previous year. All schools are filled to capacity and the directors are planning an expansion of facilities. New Brunswick and Nova Scotia also reported materially increased enrolments.

Shop teachers are reported in short supply. Some difficulty was had in getting fully qualified tradesmen to take time out from work to train for teaching jobs which pay no more than can be earned at a trade, he said.

Mr. Ford said there is a need in Canada for schools to prepare out-of-school youths, older workers and apprentices for direct entry into gainful employment and for upgrading therein. In Canada these trade schools are referred to as institutes. A number of them have been developed and in almost every province more facilities are needed and are being planned, he said.

A special survey by the Dominion Bureau of Statistics had forecast that secondary school enrolments will double in the next 12 years. The implications of this from the standpoint of vocational training facilities are far-reaching, said Mr. Ford.

Youth Training—Enrolments have not increased in this type of training, given chiefly for rural young people and fishermen. From April 1 to December 31, 1952, 1,558 new students were enrolled in these classes, a decrease of 436 from the same period of the previous year.

In Nova Scotia the upper age limit has been removed for all training given under this schedule. Last year it was found that many applying for fishermen's classes were owners of fishing vessels and more than 30 years of age. It is planned to remove the upper age limit in other provinces when the agreement is next renewed.

Representatives from Saskatchewan and Alberta reported that in their provinces training in rural electrification is being given to farmers under this schedule. This training deals with both repair work on electrical apparatus and preliminary wiring.

The number of university students being assisted under the Student Aid program increased by 792 during the fiscal year, Mr. Ford said.

Schedule K-1 (Trade Training for Armed Services)—During the last nine months of 1952, 517 Army and 64 Air Force men were given training under this schedule, a slight increase in enrolment over the same period of 1951. Those members of the services being taught were vehicle, electrical and telecommunication mechanics. Recently the Army has inquired about the possibility of having service personnel trained in commercial work under this schedule. Mr. Ford said the Department of Labour is prepared to train Army personnel in commercial work.

A board has been established in Ontario to handle requests for teachers in language and related subject matter. The Department of Social Welfare and Youth in Quebec, and the Department of Education in British Columbia, have taken on the work of supplying civilian instructors to the service schools in their respective provinces. The present requests are for a total of 60 teachers.

Schedule K-2 (Training of Workers for Defence Industries)—Special K-2 classes were held during 1952 at Halifax, Moncton, Hawkesbury, Edmonton, Vancouver, Sorel and Montreal, in the machine shop, welding and sheetmetal trades and in blueprint reading. Full-time training was given to 307 and part-time training to 1,063 persons during the last nine months of 1952. This is an increase in full-time classes of ten over the corresponding period of the previous year. New classes may be established under this schedule when it is certified that there is an immediate or potential shortage of workers for a specified trade in a particular industry engaged in defence production.

Vocational Correspondence Courses—Under the agreement 15 vocational correspondence courses have been completed; two others are finished far enough so that pupils may register; 26 are under preparation and two courses have been dropped.

Eleven thousand five hundred English and 4,500 French copies of the Vocational Correspondence Courses booklet have been distributed.

Apprenticeship—At the end of 1952, 11,585 apprentices were registered in the seven provinces with which there is an agreement. This represents an increase of 661 over the registration in September. The year-end registration for 1951 was 11,042; for 1950, 10,721; for 1949, 11,473; and for 1948, 11,483. Newfoundland has recently appointed a Director of Apprenticeship and it is expected that the province will enter into an agreement with the federal Government at an early date.

The booklet *Apprenticeship in Canada*, prepared by the Vocational Training Branch of the federal Department of Labour in 1949 and now out of print, is being revised and brought up to date.

Schedule "M" (Training of Handicapped)—Enrolment in these six-month courses, in operation in the eight provinces on the mainland, was 1,388, including 291 handicapped persons, during the last nine months of the year. Special classes have been organized for the handicapped in Newfoundland, New Brunswick, Ontario and Alberta. However, the practice followed is to place the candidates for training in regular rather than special classes.

Vocational Schools' Assistance

During the fiscal year the full amount of the annual allotment for capital costs expired on March 31, 1952, but was renewed for one year for Ontario, Manitoba and Saskatchewan, where projects had been delayed and there was still an uncollected balance in the capital allotment.

A large part of the capital funds under the Vocational Schools' Assistance Agreement was used to build vocational training

facilities at high school level, by way of composite vocational and technical high schools, and arts and crafts schools.

Mr. Ford reported that up to January 15, 1953, assistance under the Agreement had amounted to $8,550,735.99 from the special allotment of $10,000,000 for capital expenditures on buildings and equipment.

Vocational Training for Disabled

The National Co-ordinator of Civilian Rehabilitation, Ian Campbell, spoke on plans to integrate vocational training with the work of the National Advisory Committee on the Rehabilitation of Disabled Persons. This Committee has been in operation for one year (L.G., Feb. 1952, p. 128). It has suggested that in each province committees composed of the health, welfare and education departments be set up to deal with the problems of disabled persons.

Mr. Campbell said that Schedule "M" of the Vocational Training Agreement had been found to be inadequate and that a new schedule had been proposed.

A. W. Crawford, Director of Training in the federal Department of Labour, outlined the essential requirements and conditions of a special Schedule "R" for the training of disabled persons.

This schedule proposes federal-provincial sharing of costs in a project designed to provide for the vocational, technical and professional training of disabled persons to fit them for permanent employment in suitable occupations.

The proposed schedule would provide such help as longer full-time and part-time training periods than those normally provided under existing schedules; extra living and travelling allowances necessitated by disability; specialized training techniques; academic, vocational and professional training for which no provision is made under other schedules; and specially organized classes and training facilities.

Wherever possible, training under this schedule would be given in established schools and institutions, whether operated by provincial and municipal governments or by private institutions. Training would also be given on the job.

It was further proposed that wherever possible, disabled persons undergoing apprentice training would be trained in the regular way and under regular apprenticeship plans, with special provisions made for their major handicaps.

The Council recommended the adoption of the principle of the proposed schedule. It requested that Mr. Crawford proceed with measures to bring about its early implementation.

During the discussion, Mr. Campbell pointed out that rehabilitation of the disabled should not be considered an expense but rather an investment. Rehabilitated disabled persons were already contributing to the national economy, he said.

Training for New Canadians

It was reported that language instruction, both English and French, for new Canadians will be undertaken by the Department of Citizenship and Immigration. The Council had previously decided to request that funds be provided for this purpose to the Department of Labour.

Student Aid

Several provinces reported an increased demand for bursary funds under the Student Aid Program.

It had been suggested at the previous meeting of the Council that a careful inquiry be made as to the actual need for additional bursary funds under Student Aid. Mr. Crawford reported that this study would not be made by the Department of Labour until the federal Government had decided on definite action with regard to the recommendations of the Massey Commission on federal scholarships and bursaries.

The representative from Saskatchewan reported that students in his province applying for aid to attend university were given loans only. In Nova Scotia, New Brunswick and Quebec, both loans and grants were given but the amounts had to be made smaller because of the increased demand.

Vocational Training Agreements

Mr. Crawford reported that the present vocational training agreement which expires on March 31, 1953, will be extended for an additional three years, rather than draw up a new agreement and revise schedules.

The extended agreement expires on March 31, 1956, one year after termination of the Vocational Schools' Assistance Agreement, and the Correspondence Courses Agreement, and two years after the Apprentice Agreement.

Defence Training Program

Mr. Crawford said that it has been difficult to determine which trades or occupations may be regarded as critical occupations requiring special training provisions under Schedule K-2. With the

exception of a few large plants, industrial enterprises engaged in defence production have apparently been able to meet their requirements for skilled labour without establishing special training programs, he said.

He reported that special efforts were being made to encourage the promotion and development of apprenticeship training wherever shortages occurred, especially in the metal working and aircraft trades. He said that where the provinces state there are specific needs in these trades, Schedule K-2 will be put into effect to meet these needs.

Instructors for Colombo Plan

The Training Branch of the federal Department of Labour has continued to co-operate with the International Economics and Technical Co-operation Division of the Department of Trade and Commerce in helping to find suitable teachers and administrators of vocational education for service under the Colombo Plan and with various agencies of the United Nations in other countries. Requests for Canadian teachers, administrators and other personnel will be circulated to the provincial Departments of Education.

Teaching Aids and Equipment

Development of a nation-wide plan for the supplying of equipment and teaching aids to apprenticeship classes by Canadian manufacturers of automobiles was reported on by J. H. Ross of Calgary.

Mr. Ross said the purpose of the plan was to establish an over-all apprenticeship scheme and to realize a saving on the purchase of equipment. Conferences were held with representatives of the auto industry in Regina, Moncton, Montreal and Toronto. Co-operation was promised between the industry, the federal Government and the provincial Governments.

The Council was told that there existed a shortage of apprentices for body work in the automobile industry, although there was no shortage of mechanics and apprentices to this trade.

Mr. Ross will continue his efforts to develop the plan and report again at the next meeting of the Council.

Vocational Training Publications

The publication of monographs on the designated trades is continuing, the Council was told. Dr. G. V. Haythorne, Director of the Economics and Research Branch of the federal Department of Labour, said that a monograph on railway occupations had just been completed. Monographs on non-professional hospital workers and on welders were being prepared. Others on forestry workers, secretaries and office workers were being planned.

Dr. Haythorne said these monographs were distributed to schools through the Department of Education and through the National Employment Service. Requests from both provincial Departments of Education and from individuals have been increasing.

Members of the Council agreed that the monographs were useful and that their publication should be continued.

Trade Analyses

The work of preparing trade analyses, as requested by the National Conference on Apprenticeship, has been undertaken by the Economics and Research Branch of the Department of Labour. Mr. Crawford said the purpose of the analyses was to establish standards for the various trades and to outline procedures for training apprentices. He said they were not designed to establish uniformity in either the trade or the training.

Analyses were requested in 20 trades and a beginning made on the analysis of carpentry and the machinist's trade. It was felt that more consultation was needed with experts in the various fields.

Vocational Schools' Assistance Agreement

A report on proposals for revision of the Vocational Schools' Assistance Agreement was prepared by a special committee and presented by J. H. Ross.

After much discussion, this report was sent back to the committee for further study. It was moved that the special committee be expanded from three members to five and that it confer with the Dominion Statistician and others about the selection of a better basis for distribution of funds under the Vocational Schools' Assistance Agreement.

Other Matters

On the second day of the meeting, members of the Council attended a luncheon at which E. K. Ford, Director of Vocational Education in the Nova Scotia Department of Education, gave a talk on his impressions of Iraq gathered from a recent stay in that country.

In Iraq Mr. Ford was an official of the Technical Assistance Department of UNESCO. He reviewed the country's economic and social conditions and told of the help given by the United Nations

to the Iraq Government in establishing vocational schools and classes in the textile industry and in agriculture.

H. A. Jones, Director of Technical Education in the Department of Education, Victoria, spoke of a Technical Science Course being prepared in British Columbia. This course is designed to turn out high school graduates who are potential technicians, industrial leaders and engineers. The course combines scientific study with shop work and technical training.

The Council agreed to endorse a booklet to be given to each student containing his record of studies and practice and presentable anywhere in Canada.

Members Attending

Members attending the meeting of the Council were:—

Dr. G. Fred McNally; T. D. Anderson, General Secretary, Canadian Legion, BESL, Ottawa; G. G. Cushing, Secretary-Treasurer, Trades and Labour Congress of Canada, Ottawa; W. H. C. Seeley, Personnel Manager, Toronto Transportation Commission, Toronto; Mrs. A. Turner Bone, President of the National Council of Women of Canada, Montreal; E. K. Ford, Director of Vocational Education, Department of Education, Halifax; Dr. G. A. Frecker, Deputy Minister of Education, Newfoundland; J. W. McNutt, Director of Vocational Education, Department of Education, Fredericton; Gustave Poisson, Deputy Minister, Department of Social Welfare and of Youth, Quebec; W. A. Ross, Regional Director, Department of Education, Regina.

Others attending the meeting were: Dr. L. W. Shaw, Deputy Minister and Director of Education, Charlottetown; J. Delorme, Director General of Studies, Arts and Crafts Schools, Montreal; A. M. Moon, Assistant Supervisor of Secondary Education, Department of Education, Toronto; L. S. Smith, Technical School Inspector, Department of Education, Winnipeg; H. A. Jones, Director of Technical Education, Department of Education, Victoria; Dr. G. V. Haythorne, Director of the Economics and Research Branch, Department of Labour, Ottawa; J. H. Ross, Calgary; Dr. H. W. Jamieson, Director of Training Services, Veterans Welfare Services Branch, Department of Veterans Affairs, Ottawa; M. K. Hicks, Department of Finance, Ottawa; and Col. G. M. Morrison, W. Duncan, T. A. Fishbourne and J. E. Lyons of the Unemployment Insurance Commission, Ottawa.

Report on the Colombo Plan's Technical Co-operation Scheme

Scheme helps Commonwealth countries in South and South-East Asia to find necessary technical skills and train own people as technicians. Services of 80 experts, training facilities for 658 provided so far

Under the Colombo Plan, assistance to economic development in South and South-East Asia provided from outside the area is of two kinds. First, capital is being contributed to help finance the development projects of the countries in the area. Secondly, these countries are being helped to find the necessary technical skills and to train their own people as technicians and skilled workers. The United Kingdom Information Office has prepared a report, reproduced here, on the Technical Co-operation Scheme of the Colombo Plan, through which the second form of help is mainly provided.

For more than two years now, countries of South and South-East Asia have been able to call on the Technical Co-operation Scheme of the Colombo Plan for help in finding the technical experts, training facilities and training equipment required by their expanding programs of economic development. The decision to start this Scheme was taken by the Consultative Committee of the Plan at its meeting at Sydney in May 1950.

The Consultative Committee recognized that the shortage of skilled men in South and South-East Asia was great enough to warrant a further co-operative effort to supplement the contribution to the problem already being made or planned by private enterprise, by the United Nations, and under the United States "Point Four" program. The Commonwealth Governments who sponsored the Colombo Plan therefore agreed to contribute technical assistance up to the value of $22½ million over a three-year period ending on June 30, 1953. This period has now been extended

to June 30, 1957, to make it co-terminous with the period of the Colombo Plan itself.

Administration

The Scheme is administered by a Council for Technical Co-operation composed of representatives of participating Governments. It held its first meeting in December 1950, when it set up a Bureau with headquarters in Colombo. The Council and Bureau are not themselves responsible for supplying the trained men and training facilities and there is no centrally-administered fund. The Bureau acts as a clearing house—receiving requests and offers of assistance and initiating action to match them—and the Council makes recommendations on matters of policy and generally supervises the operation of the Scheme.

In the words of the Colombo Plan report, the Council and the Bureau "may usefully act as a channel for making information available to Governments about sources from which trained men and training facilities may be sought and, where necessary, as a clearing house for requests for technical assistance".

The actual provision of any item of assistance and the contracts and other necessary arrangements involved are left to direct negotiations between the giving and receiving Governments. The former meet the cost of the technical assistance they supply out of their agreed contribution to the Scheme.

The first President of the Council for Technical Co-operation was R. Coomaraswamy of Ceylon, who was re-elected in June 1952. The Director of the Bureau since August 15, 1951, has been Geoffrey Wilson, who was seconded for the job by the United Kingdom Government and now fills the role of an international official.

Membership

The original members of the Council were the United Kingdom, Canada, Australia, New Zealand, India, Pakistan and Ceylon. They were joined as full members in 1951 by Viet Nam and Cambodia and, early in 1952, by Burma and Nepal. Indonesia, the Philippines and Thailand have been represented by observers at many Council meetings. Like the Colombo Plan itself, the Technical Co-operation Scheme, although a result of Commonwealth initiative, is intended for the benefit of all countries in South and South-East Asia. Full membership of the Scheme carries with it the right to take part in the deliberations of the Council but is not a condition governing the use of the facilities of the Scheme.

Council meetings are also attended by liaison officers from the United States Government and from the United Nations Technical Assistance Board. In this way the Council seeks to avoid duplicating and overlapping the activities of other organizations operating in the same field.

Mutual Help

Co-operation is the keynote of the Scheme as its name implies: through the Council and Bureau the participating countries work together in seeking the most effective means of satisfying their technical assistance needs. And the countries in the area give as well as receive. Thus, India has agreed to provide assistance to the value of Rs. 10 million ($2,000,000) and has already made available to Ceylon the services of experts on caustic soda manufacture, sericulture and iron and steel manufacture. India has also provided Pakistan, Ceylon, Indonesia, Nepal and Thailand with scholarships at the International Statistical Education Centre in Calcutta, which is run in conjunction with UNESCO; offered fellowships at the Central Rice Research Institute at Cuttack and trained four engineers from Ceylon in building dams and power projects. Pakistan has offered a contribution of Rs. 1½ million to cover scholarships, fellowships and the provision of experts and training facilities: it has offered Ceylon four scholarships in sugar agronomy and training facilities relating to a projected vegetable oil mill. Ceylon is to contribute Rs. 1,776,000 for each year of the scheme and is providing training facilities in rural development work and the working of co-operatives.

Achievements

As at August 31, 1952, the services of 80 experts and training facilities for 658 persons had been offered and accepted under the Scheme. The allocation of experts was as follows: India, 15; Pakistan, 36; and Ceylon, 29. The supplying countries were the United Kingdom, 39; Canada, 4; Australia, 21; New Zealand, 13; and India, 3.

Of the 658 training places already made available India is filling 261, Pakistan, 182; Ceylon, 148; the Federation of Malaya, 27; Singapore, 1; North Borneo, 4; Sarawak, 6; Indonesia, 16; Nepal, 6; Philippines, 3; and Thailand, 4. The facilities were provided by the United

Kingdom, 207; Canada, 95; Austrilia, 218; New Zealand, 107; India, 30 and Pakistan, one.

Senior officials, mainly from India and Pakistan, have been on short missions to Australia, Canada, and New Zealand to acquaint themselves with the latest developments in civil engineering, power development, civil aviation, agriculture, education and other fields and to explore what these countries can offer in the way of experts and training facilities. Australia has conducted special courses for nominees of recipient countries in Government administration, social services and librarianship; further courses of this kind are planned.

There have been a number of schemes where capital assistance that has been provided for economic development has been combined with technical assistance. The two principal examples of this are: (a) in Pakistan, where an experimental livestock farm is being set up in the Punjab and where the Canadian, Australian and New Zealand Governments are joint contributors providing equipment, livestock and the personnel to inaugurate and manage the scheme in its early stages; (b) in Ceylon, the Canadian Government is providing personnel as well as trawlers and refrigeration plant for the fishing industry.

Other offers of training facilities, experts, consultants and training equipment have been made by all the participating Governments. At its last policy session, the Council agreed that, in particular, emphasis should be placed on the development of training institutions within South and South-East Asia and stressed the need to help this process by making available the training equipment required. This aspect of technical co-operation is being rapidly expanded.

Canadian Contribution to the Colombo Plan

(The part Canada is playing in the United Nations Expanded Program of Technical Assistance and in the Colombo Plan is summarized in the December issue of External Affairs, *monthly publication of the Department of External Affairs, from which the following excerpt is taken.)*

During the past few months Canadian experts have been supplied to the United Nations Technical Assistance Administration to establish a training centre for blind persons in Egypt, to make recommendations on public administrative services in Burma, and to advise on the organization of a civil service staff college and training in Israel. A Canadian has gone to Burma to help with an ILO training program. Two more Canadians have recently been recruited to work in the field with FAO in agricultural development programs. Canadians have been recruited for work in the Middle East and in Asia under WHO's program to give assistance in public health and several new nominations of Canadians to assist in UNESCO's program for assistance in fundamental education have been made. Canadian experts have been made available to Colombia to help in the organization of public utilities, to Costa Rica to advise in the modernization of educational facilities, to Mexico to help set up a government printing bureau, and to Bolivia as housing and mining production experts with the comprehensive United Nations Mission to that country. Altogether more than 100 Canadians are now serving abroad with the United Nations Expanded Program.*

With the particular objectives of the Colombo Program in mind, the Canadian Government has lent to the Government of Ceylon a senior professor of agriculture to organize the newly-established Department of Agriculture at the University of Ceylon. A soil-conservation expert from Western Canada has also gone to that country as director of a newly-organized Soil Conservation Department in the Ceylon Government. Also, in answer to a request from the Government of Ceylon, Canada has offered the services of a well-known consultant engineering firm to undertake a comprehensive survey of the drainage and sanitation system of the city of Colombo.

Offers have been made to India of a senior navigation and seamanship expert to serve as principal of the Technical and Engineering College in Bombay and of a vocational-training expert to act as an adviser on vocational training to the Indian Ministry of Labour. If the services of this expert are accepted by the Gov-

*For an account of the United Nations Expanded Program of Technical Assistance and the ILO's participation in it, see the International Labour Review, monthly publication of the ILO, for November-December, 1952.

ernment of India, he will also make recommendations to the Indian authorities about vocational-training equipment which Canada might be able to supply.

Efforts are being made to recruit agricultural engineers to work with FAO in the establishment of agricultural machinery maintenance depots in connection with the Thal Development Project and Experimental Farm in Pakistan. These experts will be required to train young Pakistanis who can in time take over the maintenance of this machinery. Further offers of experts in a variety of fields will be made both in India and Pakistan within the next few weeks.

The operation of the Program for Technical Co-operation is not confined to Commonwealth countries in Asia. Several non-Commonwealth countries, notably Nepal, Burma and Indonesia, have indicated their wish to receive assistance under the Program and at the request of the Government of Malaya, Canada has nominated several agricultural experts and vocational training teachers to serve as instructors in machine-shop practice and in motor mechanics.

The results of Canada's efforts in the field of technical assistance to help the Asian countries in their plans for economic and social development are becoming more evident. There has been an increase in the number of requests of Canada for assistance under both the United Nations and the Colombo Programs. There has been a corresponding increase in Canada's ability to meet them, although the recruiting of a sufficient number of Canadian experts, instructors and technicians for service abroad remains the most difficult problem, and the demand for the services of qualified Canadians from federal and provincial government departments, from universities and from private organizations, continues to increase.

Capital Projects

In the course of advising the governments to which they have been loaned, Canadian technical experts sent out under the Colombo Program may produce recommendations leading to a Canadian-assisted capital project in that country. The recommendations of a Canadian fisheries expert sent to Ceylon a year ago have resulted in a project for the development of fisheries there which Canada is financing under the capital-development part of the Colombo Plan. Similarly capital-development projects in which Canada is assisting Colombo Plan countries in turn generate further requirements for technical assistance. For example, as a direct result of capital assistance Canada is giving to Pakistan, to build a cement plant, the Government of Pakistan has asked that selected Pakistani workers and engineers be trained in the building and the operation of the plant as the project goes forward.

Training Programs in Canada

At the same time as more emphasis is being placed upon recruiting of Canadian experts and instructors to give technical assistance in the under-developed countries and positive steps are being taken to co-ordinate Canadian activities in South and South-East Asia with those of the United Nations Expanded Program, the training in Canada of persons sent here by the United Nations and its agencies or nominated by the Asian governments participating in the Colombo Program continues as an important feature of Canadian participation in these programs. A large part of the success of this aspect of Canada's technical assistance activities has been due to the way in which universities, provincial government and private agencies and individuals across the country have received these trainees. As of November 1, 105 persons had been accepted for training in Canada under the Colombo Program and well over 200 have been directed to Canada by the United Nations and its specialized agencies.

An indication of the variety of fields in which training has been offered to Colombo Plan countries is given by a partial listing of the trainees from those countries at present in Canada. Ceylonese nominees are studying agricultural engineering, plant pathology, teacher training and business administration. Trainees from India are studying hydro-electric power development, mining, electrical and agricultural engineering, highway construction, biochemistry and rural electrification. Trainees from Pakistan are studying tele-communications, education, agricultural chemistry and mechanical engineering. At the request of the United Nations, courses have been arranged in co-operatives, in railroad construction, statistics, public administration, cost accounting and auditing, social welfare, mining, coal petrology, fertilizer and cement manufacture, meat packing and town planning.

Amongst the most interesting and successful of these training programs has been the comprehensive five-months' course offered to 12 junior administrative officers from Pakistan in which the federal Government, four of the provinces, universities and private industry co-operated. During

their stay in this country these young Pakistanis lived in private homes and studied and observed the way things are done in Canada from the work of the RCMP in isolated parts of Western Canada to the co-operative activities of the Extension Department of St. Francis Xavier University in the fishing communities of Nova Scotia.

During the past year six senior health officers from India and Pakistan came to Canada to study the organization of federal and provincial health services and Canadian medical facilities. They were especially interested in what was being done to lower T.B. rates in Canada and in the health services available to Canadians living in rural communities. The experience of this mission has resulted in further requests being made of Canada for assistance from the Asian countries in coping with their public-health problems.

At the request of UNESCO, arrangements have been made with the co-operation of Laval University for studies and seminars in fundamental education for French-speaking trainees from Haiti and from the Middle East. The Extension Department at St. Francis Xavier University in Nova Scotia and the Government of Saskatchewan have offered courses in agricultural co-operatives for United Nations Fellows from India, Korea and Nigeria.

Economist Assesses Current Labour Trends and Problems

Sumner H. Slichter, labour economist and Harvard professor, examines unions' role in the economy, philosophy and policies of United States trade unions, their power and responsibility, the problem of disputes that imperil public health and safety, and President's strike powers

How has labour fared during the strong sellers' market of the past six years?

How have the stockholders and management fared?

What kind of philosophy and basic policies have the American trade unions pursued during this period?

What are some of the principal public issues that have been created by the rise of powerful trade unions, in particular the problem of disputes that imperil public health or safety?

These and related questions were discussed in an address, "Current Labour Trends and Labour Problems," delivered by Prof. Sumner H. Slichter of Harvard before the American Gas Association last October.

Trade unions, said Prof. Slichter, are more firmly entrenched in American industry than ever before. The total membership in 1951 he said, was about 14·2 million, divided among about 7·8 million in the AFL,* 4·4 million in the CIO† and 2·0 million in neither federation.

Union Gains

How has labour fared during the strong sellers' market of the past six years?

Labour has made substantial gains in wages, in fringe benefits and in union security, the professor said.

Between 1946 and June 1952, while the consumers' price index rose 35·9 per cent, Prof. Slichter said, hourly earnings in manufacturing rose 61 per cent; in bituminous coal mining, nearly 62 per cent; in building construction, 54 per cent; in railroading, 63 per cent; and in the telephone industry, 38·6 per cent. In gas and electric utilities, average hourly earnings rose 33 per cent between 1947 and June 1952, while the consumers' price index was rising 18·8 per cent.

*The AFL at its 1952 convention reported a membership of 8,098,302 (L.G., Nov. 1952, p. 1453).

†A total of 5,692,284 votes was cast in the recent election for the CIO presidency. This total probably exceeds actual CIO membership because many smaller unions and some of the larger ones that had lost membership in the preceding year were given increased voting strength.

Prof. Slichter termed "substantial" the gains made in fringe benefits. There has been a rapid spread of pension and sick benefit plans and of holidays and vacations with pay, he said. In 1951, employer contributions to private pension and welfare funds exceeded $3 billion—about two and a half times the 1946 total.

In union security, the spread of union shop contracts has been rapid. A government survey of 2,651 contracts in effect in late 1950 and 1951 showed that 58 per cent of the 5·6 million workers were covered by union shop contracts. A similar survey made a year earlier showed 50 per cent of four million workers covered. This acceleration Prof. Slichter attributed to the Taft-Hartley Act which, until October 1951, prohibited employers from granting the union shop unless the union shop had been approved by the employees in a government-conducted election. Not until government conducted the elections required by the Taft-Hartley Act did the country realize how strongly workers favour the union shop, Prof. Slichter declared.

Effect on Profits

How have the stockholders and management fared during the strong sellers' market?

Fortunately, Prof Slichter said, the rise in efficiency has been sufficiently rapid that corporate profits have held up well in spite of the fact that wage rates have increased much faster than have prices. Corporate profits, after taxes and inventory valuation adjustment, were 3·6 per cent of sales in 1951, compared with 5·0 per cent in 1949 and 3·2 in 1946.

The strong sellers' market, he said, seems to have had the effect of slightly raising the share of employees in the product of industry.

Effect on Management

How has the strong sellers' market affected the ability of managements to do a good job of operating the plants? Have unions taken advantage of their strong bargaining power to impose restrictive rules or arrangements on management?

Because the experience of no two companies is alike, an answer to these questions is not easy, Prof. Slichter said. After a number of interviews with managements, he found that a sharp difference existed between what each management says about itself and what it thinks has been happening elsewhere.

Certainly, he said, collective bargaining has become more two-sided. Today, managements more frequently present proposals to the union negotiators than was the practice a few years ago. The view that bargaining was simply an occasion when the union "asked for things" has changed. Various companies report having negotiated improvements in their contracts during the last few years and, said Prof. Slichter, "an improvement from the standpoint of management is not necessarily a bad feature from the standpoint of the union." The evidence is a healthy sign, he observed; it shows that the bargaining process has vitality, that both sides are using negotiations to talk over problems with the other side and to reach mutual agreement on their solution.

Although bargaining is being conducted more satisfactorily, Prof. Slichter found little evidence that managements are doing long-range planning in the field of industrial relations. "Managements in general," he said, "have not come to grips with fundamental long-run policy issues that are raised by the growth of powerful unions... Only a small proportion of managements seem to have given much thought to the kind of relationship with unions that is practicable and desirable. Can it be a more or less co-operative relationship? Must it be a state of armed truce? How much working together is possible and desirable? Working with unions is likely to increase the prestige of unions. Are managements willing to do anything that raises the prestige of unions, even if by so doing managements raise the efficiency of operations?"

Employer Policies

Other basic policy questions that require managerial decision, Prof. Slichter said, are:—

1. What participation does management desire on the part of employees in the conducting of operations and in the handling of problems?
2. Is employee participation desirable from management's standpoint? Why, or why not?
3. Does management intend as a matter of ordinary practice to consult with unions on matters that are within the discretion of management?
4. Is management prepared to give some form of security to the union?

Union Policies

What kind of philosophy and basic policies have American trade unions been pursuing during the post-war period?

Trade unions, the noted labour economist said, are, above everything else, interested

in getting substantially better wages and conditions for their members. With a few notable exceptions, they are not interested in sharing in or co-operating with management. As he saw it, the basic policy of most unions is as follows—:

"American industry is enormously productive. We wish to keep it enormously productive, and the best way to do this is to insist on big wage increases and thereby to force managements to make even stronger efforts to improve methods. We do not as a general rule obstruct the introduction of new equipment or new processes. In fact, we hope that managements will introduce new machinery and will invent better methods because such things will enable us to get additional wage increases."

Neither management nor the public, Prof. Slichter thought, fully realize how desirable is this basic policy.

"The point of view of unions," he said, "implies a significant specialization of functions and activities. The job of management is to manage. Unions prefer to let management do this. They prefer to specialize on being strong and active bargaining agents and to win gains in productivity. And they believe that their pressure for higher wages and other benefits actually makes managements try harder to raise productivity."

So long as their present policies produce good results, unions will be willing to keep their present philosophy, Prof. Slichter felt. If, he said, managements on careful reflection approve of the present specialization of functions they will be interested in seeing that it works. "How to make it work is one of the most fundamental policy decisions that managements must make."

Labour Costs and Prices
